1 Documentation overview for hyperref

The documentation for package `hyperref` consists of several files:

Manual The user documentation is also available as HTML.

README Here information is collected that is not yet in the manual: new features, package compatibility, limitations, known problems, ...

ChangeLog This file records the version history.

Options This file provides a short option summary.

Bookmark talk, slides Slides for the talk “PDF information and navigation elements with hyperref, pdfTeX and thumbpdf” at EuroTeX 1999.

Bookmark talk, paper The paper version of the talk.

Source code documentation:

hyperref.dtx This is the source code documentation for hyperref (this file).

backref.dtx “Back referencing from bibliographical citations”

nameref.dtx “Section name references in L^AT_EX”

3 File hycheck.tex

Many commands of L^AT_EX or other packages cannot be overloaded, but have to be redefined by hyperref directly. If these commands change in newer versions, these changes are not noticed by hyperref. With this test file this situation can be checked. It defines the command \checkcommand that is more powerful than L^AT_EX's \CheckCommand, because it takes \DeclareRobustCommand and optional parameters better into account.

```
1 <*check>
2 \documentclass{article}
3 \makeatletter
\checklatex Optional argument: release date of LATEX.
4 \newcommand*{\checklatex}[1][]{%
5   \typeout{}%
6   \typeout{* Format: 'LaTeX2e' #1}%
7   \typeout{\space\space Loaded: '\fmtname' \fmtversion}%
8 }%
\checkpackage The argument of \checkpackage is the package name without extension optionally followed by a release date.
9 \newcommand*{\checkpackage}[1]{%
10  \def\HyC@package{#1}%
11  \let\HyC@date\empty%
12  \@ifnextchar[\HyC@getDate\HyC@checkPackage
13 }%
\HyC@getDate The release date is scanned.
14 \def\HyC@getDate[#1]{%
15  \def\HyC@date{#1}%
16  \HyC@checkPackage
17 }%
\HyC@checkPackage
18 \def\HyC@checkPackage{%
19  \typeout{}%
20  \begingroup
21  \edef\x{\endgroup
22  \noexpand\RequirePackage{\HyC@package}%
23  \ifx\HyC@date\empty\relax\else[\HyC@date]\fi%
24 }%
25 \x
26 \typeout{}%
27 \typeout{%
28  * Package '\HyC@package'%
29  \ifx\HyC@date\empty
30  \else
31  \space\HyC@date
32  \fi
33 }%
34 \@ifundefined{ver@\HyC@package.sty}{%
35 }{%
36  \typeout{%
37   \space\space Loaded: '\HyC@package' %
38   \csname ver@\HyC@package.sty\endcsname
39 }%
40 }%
41 }
```

\checkcommand The macro \checkcommand parses the next tokens as a L^AT_EX definition and compares this definition with the current meaning of that command.

```
42 \newcommand*\checkcommand[1]{%
43   \begingroup
44   \ifx\long#1\relax
45     \expandafter\HyC@checklong
46   \else
47     \def\HyC@defcmd{\#1}%
48     \expandafter\let\expandafter\HyC@next
49       \csname HyC@\expandafter\@gobble\string#1\endcsname
50     \expandafter\HyC@checkcommand
51   \fi
52 }
```

\HyC@checklong The definition command \def or \edef is read.

```
53 \def\HyC@checklong#1{%
54   \def\HyC@defcmd{\long#1}%
55   \expandafter\let\expandafter\HyC@next
56     \csname HyC@\expandafter\@gobble\string#1\endcsname
57   \HyC@checkcommand
58 }
```

\HyC@checkcommand The optional star of L^AT_EX's definitions is parsed.

```
59 \def\HyC@checkcommand{%
60   \ifx\HyC@next\relax
61     \PackageError{hycheck}{%
62       Unknown command '\expandafter\strip@prefix\meaning\HyC@cmd'%
63     }{\@ehd
64     \expandafter\endinput
65   \fi
66   \@ifstar{%
67     \def\HyC@star{*}%
68     \HyC@check
69   }{%
70     \let\HyC@star\@empty
71     \HyC@check
72   }
73 }
```

\HyC@check The macro \HyC@check reads the definition command.

```
74 \def\HyC@check#1{%
75   \def\HyC@cmd{\#1}%
76   \let\HyC@org@cmd\#1%
77   \let#1\relax
78   \let\HyC@param\@empty
79   \HyC@Toks{}%
80   \let\HyC@org@optcmd\HyC@noValue
81   \let\HyC@org@robustcmd\HyC@noValue
82   \let\HyC@org@robustoptcmd\HyC@noValue
83   \HyC@next
84 }
```

\HyC@noValue

```
85 \def\HyC@noValue{NoValue}
```

\HyC@newcommand The code for \newcommand.

```

86 \def\HyC@newcommand{%
87   \let\HyC@cmd\HyC@cmd
88   \@ifnextchar[\HyC@nc@opt\HyC@nc@noopt
89 }

```

\HyC@Toks A register for storing the default value of an optional argument.

```
90 \newtoks\HyC@Toks
```

\HyC@nc@noopt This macro \HyC@nc@noopt is called, if the parser has reached the definition text.

```

91 \long\def\HyC@nc@noopt#1{%
92   \edef\x{%
93     \expandafter\noexpand\HyC@defcmd
94     \HyC@star
95     \expandafter\noexpand\HyC@cmd
96     \HyC@param\the\HyC@Toks
97   }%
98   \x{#1}%
99   \HyC@doCheck
100 }

```

\HyC@nc@opt This macro scans the first optional argument of a L^AT_EX definition (number of arguments).

```

101 \def\HyC@nc@opt[#1]{%
102   \def\HyC@param{[#1]}%
103   \@ifnextchar[\HyC@nc@default\HyC@nc@noopt
104 }

```

\HyC@nc@default Macro \HyC@nc@default scans the default for an optional argument.

```

105 \def\HyC@nc@default[#1]{%
106   \HyC@Toks={[#1]}%
107   \edef\HyC@optcmd{%
108     \expandafter\noexpand
109     \csname\expandafter\string\HyC@cmd\endcsname
110   }%
111   \expandafter\let\expandafter\HyC@org@optcmd\HyC@optcmd
112   \HyC@nc@noopt
113 }

```

\HyC@DeclareRobustCommand \DeclareRobustCommand{\cmd} makes the command \cmd robust, that then calls \cmd_ with a space at the end of the command name, defined by \newcommand. Therefore the further parsing is done by \HyC@nc@opt or \HyC@nc@noopt of the \HyC@newcommand chain.

```

114 \def\HyC@DeclareRobustCommand{%
115   \edef\HyC@robustcmd{%
116     \expandafter\noexpand
117     \csname\expandafter\expandafter\expandafter\@gobble
118     \expandafter\string\HyC@cmd\space\endcsname
119   }%
120   \expandafter\let\expandafter\HyC@org@robustcmd\HyC@robustcmd
121   \expandafter\let\HyC@robustcmd\relax
122   \let\HyC@cmd\HyC@robustcmd
123   \@ifnextchar[\HyC@nc@opt\HyC@nc@noopt
124 }

```

\HyC@def The parameter text of \def or \edef is stored in the token register \HyC@Toks.

```

125 \def\HyC@def#1{%
126   \HyC@Toks={#1}%

```

```

127   \HyC@nc@noopt
128 }
129 \let\HyC@edef\HyC@def

```

\HyC@doCheck This command performs the checks and prints the result.

```

130 \def\HyC@doCheck{%
131   \typeout{* Checking '\HyC@string\HyC@cmd':}%
132   \HyC@checkItem{cmd}%
133   \HyC@checkItem{robustcmd}%
134   \HyC@checkItem{optcmd}%
135   \HyC@checkItem{robustoptcmd}%
136   \endgroup
137 }

```

\HyC@checkItem A single check.

```

138 \def\HyC@checkItem#1{%
139   \expandafter\ifx\csname HyC@org@#1\endcsname\HyC@noValue
140   \else
141     \expandafter\expandafter\expandafter\ifx
142       \csname HyC@#1\expandafter\endcsname
143       \csname HyC@org@#1\endcsname
144         \expandafter\HyC@checkOk\csname HyC@#1\endcsname
145   \else
146     \expandafter\HyC@checkFailed
147       \csname HyC@#1\expandafter\endcsname
148       \csname HyC@org@#1\endcsname
149   \fi
150 \fi
151 }

```

\HyC@string Some shorthands.

\HyC@meaning

```

152 \def\HyC@string#1{\expandafter\string#1}
153 \def\HyC@meaning#1{\expandafter\meaning#1}

```

\HyC@checkOk The result, if the check succeeds.

```

154 \def\HyC@checkOk#1{%
155   \typeout{\space\space`\\HyC@string#1' ok.}%
156 }

```

\HyC@checkFailed The result, if the check fails.

```

157 \def\HyC@checkFailed#1#2{%
158   \typeout{\space\space`\\HyC@string#1' failed.}%
159   \typeout{\space\space* original: \meaning#2}%
160   \typeout{\space\space* expected: \HyC@meaning#1}%
161 }

162 % ****
163 </check>
164 <*package>

```

4 Package options and setup

4.1 Save catcodes

There are many packages that change the standard catcodes.

First we save the original meaning of ‘ and = in the token register \toks@, because we need the two characters in the macros \Hy@SetCatcodes and \Hy@RestoreCatcodes.

```

165 \begingroup
166   \@makeother`%
167   \@makeother=%
168   \edef\x{%
169     \edef\noexpand\x{%
170       \endgroup
171       \noexpand\toks@{%
172         \catcode 96=\noexpand\the\catcode`\noexpand\`relax
173         \catcode 61=\noexpand\the\catcode`\noexpand=``relax
174       }%
175     }%
176     \noexpand\x
177   }%
178 \x
179 \@makeother`%
180 \@makeother=
```

\Hy@SetCatcodes

```

181 \def\Hy@SetCatcodes{%
182   \@makeother`%
183   \@makeother=%
184   \catcode`\$=3 %
185   \catcode`\&=4 %
186   \catcode`\^=7 %
187   \catcode`\_=8 %
188   \@makeother\|%
189   \@makeother\%:%
190   \@makeother\(%%
191   \@makeother\)%%
192   \@makeother\[%
193   \@makeother\]%
194   \@makeother\//%
195   \@makeother\!%
196   \@makeother\<%
197   \@makeother\>%
198   \@makeother\.%%
199   \@makeother\;%%
200   \@makeother\+%
201   \@makeother\-%%
202   \@makeother\%"%
203   \@makeother\'%%
204 }
```

\Hy@RestoreCatcodes

```

205 \begingroup
206   \def\x{\catcode`\noexpand#1=\the\catcode`\#1\relax}%
207   \xdef\Hy@RestoreCatcodes{%
208     \the\toks@
209     \x\$%
210     \x&%
211     \x^%
212     \x_%
213     \x\|%
214     \x\%:%
215     \x\(%
```

```

216      \x\)%
217      \x\[%
218      \x\]%
219      \x\/%
220      \x\!%
221      \x\<%
222      \x\>%
223      \x\.%
224      \x\;%
225      \x\+%
226      \x\-%
227      \x\%"%
228      \x\'%%
229  }%
230 \endgroup

```

231 \Hy@SetCatcodes

It needs the December 95 release of L^AT_EX, because it uses \protected@write, and it defines commands in options; and the page setup internal code changed at that point. It'll probably break with the later releases!

```

232 \RequirePackage{keyval}[1997/11/10]
233 \RequirePackage{hycolor}
234 \def\Hy@Warning#1{\PackageWarning{hyperref}{#1}}
235 \def\Hy@WarningNoLine#1{\PackageWarningNoLine{hyperref}{#1}}
236 \def\Hy@Info#1{\PackageInfo{hyperref}{#1}}

```

4.2 Compatibility with format dumps

\AfterBeginDocument For use with pre-compiled formats, created using the ldump package, there needs to be 2 hooks for adding material delayed until \begin{document}. These are called \AfterBeginDocument and \AtBeginDocument. If ldump is not loaded, then a single hook suffices for normal L^AT_EX processing.

The default definition of \AfterBeginDocument cannot be done by \let because of problems with xypic.

```

237 \@ifundefined{AfterBeginDocument}{%
238   \def\AfterBeginDocument{\AtBeginDocument}%
239 }{}%

```

4.3 Switches

```

240 \newif\ifHy@typxml

325 \Hy@linkcounter0
326 \Hy@pagecounter0

```

5.1 Macros for recursions

\Hy@ReturnAfterElseFi	The commands \Hy@ReturnAfterElseFi and \Hy@ReturnAfterFi avoid a too deep \if-nesting especially for recursive macros.
\Hy@ReturnAfterFi	<pre> 327 \long\def\Hy@ReturnAfterElseFi#1\else#2\fi{\fi#1} 328 \long\def\Hy@ReturnAfterFi#1\fi{\fi#1} 329 \let\Hy@ReturnEnd\@empty 330 \long\def\Hy@ReturnAfterFiFiEnd#1\fi#2\Hy@ReturnEnd{\fi\fi#1} 331 \long\def\Hy@ReturnAfterElseFiFiEnd#1\else#2\Hy@ReturnEnd{\fi\fi#1} </pre>

5.2 Babel's protection of shorthand characters

\Hy@safe@activestrue	Babel's switch setting commands cannot be used directly, because they can be undefined if babel is not loaded.
\Hy@safe@activesfalse	<pre> 332 \def\Hy@safe@activestrue{\csname @safe@activestrue\endcsname} 333 \def\Hy@safe@activesfalse{\csname @safe@activesfalse\endcsname} </pre>

5.3 Coordinate transformations

At some places numbers in pdf units are expected (eg: FitBH, ...). The following macros perform the transformation from TeX units (pt) to PDF units (bp).

\hypercalcbp The user macro \hypercalcbp can be used, for example, inside option values:

```
pdfstartview={FitBH \hypercalcbp{\paperheight-\topmargin-1in}}
```

- It cannot be used inside \usepackage, because LaTeX expands the options before package hyperref is loaded and \hypercalcbp is defined.
- With e-TeX extensions an expandable implementation is very easy; \hypercalcbp can be used everywhere and is expanded at use.

- Without e-TeX's features `\hypercalcbp` cannot be implemented expandable (practically) and have to be supported by `\hypercalcbpdef`. Limitations:
 - Works only in options that use `\hypercalcbpdef` (currently only `pdfstartview`).
 - For calculations package `calc` has to be loaded.
 - The expansion of the argument is done at definition time.

Example (TeX):

```

\usepackage{calc}
\usepackage[...]{hyperref}
\hypersetup{
  pdfstartview={FitBH \hypercalcbp{\paperheight-\topmargin-1in
    -\headheight-\headsep}}
}

\hypercalcbp

334 \begingroup\expandafter\expandafter\expandafter\endgroup
335 \expandafter\ifx\csname dimexpr\endcsname\relax
336   \def\hypercalcbpdef#1#2{%
337     \begingroup
338       \toks@{}%
339       \HyCal@scan#2\hypercalcbp@nil

```

6 Dealing with PDF strings

The PDF string stuff done by Heiko Oberdiek.

Email: oberdiek@uni-freiburg.de.

Naming convention: All internal commands that are only needed by \pdfstringdef are prefixed with \HyPsd@.

6.1 Description of PDF strings

The PDF specification defines several places to hold text strings (bookmark names, document information, text annotations, etc.). The PDF strings have following properties:

- They are surrounded by parentheses. The hexadecimal form is not supported.
- Like PostScript language strings they use the same escaping mechanism:

\\"\\	the backslash itself
\\", \\(unbalanced parentheses
\n, \r, \t, \b, \f	special white space escape sequences
\ddd	octal character code <i>ddd</i>
- Strings are stored either in PDFDocEncoding, which is a superset of ISOLatin1 and is compatible with Unicode with character codes below 256, or in Unicode.

6.2 Definition of \pdfstringdef

The central macro for dealing with PDF strings is \pdfstringdef. It defines a command #1 to be the result of the conversion from the string in #2 to a legal PDFDocEncoded string. Currently the definition is global, but this can be changed in the future.

Important: In \TeX 's view PDF strings are written to a file and are expanded only in its mouth. Stomach commands that cannot be expanded further aren't executed, they are written verbatim. But the PDF reader that reads such a string isn't a \TeX interpreter!

The macro \pdfstringdef consists of three main parts:

1. Preprocessing. Here the expansion is prepared. The encoding is set and many commands are redefined, so that they work appropriate.
2. Expansion. The \TeX string is expanded the first time to get a PDF string.
3. Postprocessing. The result of the expansion is checked and converted to the final form.

\pdfstringdef \pdfstringdef works on the tokens in #2 and converts them to a PDF string as far as possible:

- The result should obey the rules of the PDF specification for strings.
- The string can safely processed by \TeX , because the tokens have only catcodes 10 until 12.

The result is stored in the command token given in #1.

375 \def\pdfstringdef#1#2{%

Many redefinitions are needed, so all the work is done in a group.

376 \begingroup

6.2.1 Preprocessing

Octal escape sequences. To avoid problems with eight bit or non printable characters, the octal escape notation is supported. So most glyphs in the encoding definitions for PD1 and PU produce these octal escape sequences. All three octal digits have to be used:

- Wrong results are avoided, if digits follow that are not part of the octal sequence.
- Macros rely on the fact that the octal sequences always consist of three digits (vtex driver, Unicode support).

The escape sequences start with a backslash. By `\string` it will be printed. Therefore it is ensured that the TeX escape character indeed prints as a normal backslash. Eventually this line can be removed, because this is standard L^AT_EX behaviour.

```
377 \escapechar`\\%
```

From the view of TeX a octal sequence consists of the command tokens `\0` until `\3` and two digits. For saving tokens `\0`, `\1`, `\2`, and `\3` are directly used without a preceding `\string` in the glyph definitions. This is done here locally by defining the `\0` until `\3` commands. So the user can use octal escape sequences directly, the disadvantage is that a previous definition of this short commands does not apply.

```
378 \edef\0{\string\0}%
379 \edef\1{\string\1}%
380 \edef\2{\string\2}%
381 \edef\3{\string\3}%
```

Setting font encoding. The unicode encoding uses `\8` and `\9` as marker for the higher byte. `\8` is an abbreviation for the higher bytes 0 until 7 that can be expressed by one digit. `\8` will be converted to `\00`. However `\9` only marks the next three digits as higher byte and will be removed later.

The encoding is set by `\enc@update` for optimizing reasons.

```
382 \ifHy@unicode
383   \edef\8{\string\8}%
384   \edef\9{\string\9}%
385   \fontencoding{PU}%
386   \HyPsd@UTFviii
387 \else
388   \fontencoding{PD1}%
389 \fi
390 \enc@update
```

Internal encoding commands. `\pdfstringdef` interpretes text strings which are not allowed to contain mathematical stuff. The text glyph commands will produce a warning, if called in math mode. But this warning disturbs while expanding. Therefore we check for math mode here, before `\@inmathwarn` will be disabled (see below).

```
391 \@inmathwarn\pdfstringdef
```

If a glyph is used, that isn't in the PD1/PU encoding there will be an infinite error loop, because the NFSS encoding stuff have to be expanded unprotected (`\edef`), so that the assignments of `\@changed@cmd` don't take place. To patch this behaviour I only found `\@inmathwarn` as a usable hook. While an `\edef` a warning message by `\@inmathwarn` or `\TextSymbolUnavailable` cannot be give out, so `\@inmathwarn` should be disabled. And with the help of it the assignments in `\@changed@cmd` can easily be caught (see below).

```
392 \let\@inmathwarn\HyPsd@inmathwarn
```

Unknown composite characters are built with `\add@accent`, so it is redefined to provide a warning.

```
393 \let\add@accent\HyPsd@add@accent
```

Commands that don't use NFSS directly. There are several commands that prints characters in the printable ASCII area that don't obey the NFSS, so they have to be redefined here.

```
394 \let\{\textbraceleft  
395 \let\}\textbraceright  
396 \let\\textbackslash  
397 \let#\textnumbersign  
398 \let$\textdollar  
399 \let%\textpercent  
400 \let&\textampersand  
401 % \let~\textasciitilde  
402 \let\_textunderscore  
403 \let\P\textparagraph  
404 \let\ldots\textellipsis  
405 \let\dots\textellipsis
```

Newline `\newline` or `\\"` do not work in bookmarks, in text annotations they should expand to `\r`. In pdf strings `\\"` stands for a backslash. Therefore the commands are disabled now. The user can redefine them for a result what he want:

backslash: `\pdfstringdefDisableCommands{\let\\textbackslash}`

new line: `\pdfstringdefDisableCommands{\let\\textCR}`

disabled: `\pdfstringdefDisableCommands{\let\\empty}`

At any case, however, the optional argument or the star cannot be scanned in a 100% sure manner.

```
406 \def\\{\pdfstringdefWarn\\}%  
407 \def\newline{\pdfstringdefWarn\newline}%
```

Logos. Because the box shifting used in the `\TeX` logo does not work while writing to a file, the standard `\TeX` logos are redefined.

```
408 \def\TeX{\TeX}%  
409 \def\LaTeX{\LaTeX}%  
410 \def\LaTeXe{\LaTeXe}%  
411 \def\cTeX{\cTeX}%  
412 \def\SiTeX{\SiTeX}%  
413 \def\MF{\Metafont}%  
414 \def\MP{\Metapost}%,
```

Standard font commands. Because font changes do not work, the standard font switching commands are disabled.

```
415 \let\emph@\firstofone  
416 \let\textnormal@\firstofone  
417 \let\textrm@\firstofone  
418 \let\textsf@\firstofone

462   \let\grq\textgrq
463   \let\fllqq\textfllqq
464   \let\frrqq\textfrrqq
465   \let\fllq\textfllq
466   \let\frrq\textfrrq

```

Package french. The support is deferred, because it needs \GenericError to be disabled (see below).

Package FrenchPro. This package uses:

```
\if@mid@expandable{not fully expandable code}{fully expandable code}  
467 \let\if@mid@expandable\@firstoftwo
```

AMS classes.

```
468 \HyPsd@AMSclassfix
```

Redefinition of \hspace \hspace don't work in bookmarks, the following fix tries to set a space if the argument is a positive length.

```
469 \let\hspace\HyPsd@hspace
```

Commands of referencing and indexing systems. Some L^AT_EX commands that are legal in \section commands have to be disabled here.

```
470 \let\label\@gobble  
471 \let\index\@gobble  
472 \let\glossary\@gobble  
473 \let\href\@secondoftwo  
474 \let\@mkboth\@gobbletwo
```

The \ref and \pageref is much more complicate because of their star form.

```
475 \let\ref\HyPsd@ref  
476 \let\pageref\HyPsd@pageref  
477 \let\autoref\HyPsd@autoref
```

Miscellaneous commands.

```
478 \let\leavevmode\@empty  
479 \let\mbox\@empty  
\halign causes error messages because of the template character #.  
480 \def\halign{\pdfstringdefWarn\halign\@gobble} %
```

Patch for cjk bookmarks.

```
481 \ifHy@CJKbookmarks  
482 \HyPsd@CJKhook  
483 \fi
```

User hook. The switch \Hy@pdfstring is turned on. So user commands can detect that they are processed not to be typesetted within T_EX's stomach, but to be expanded by the mouth to give a PDF string. At this place before interpreting the string in #2 additional redefinitions can be added by the hook \pdfstringdefPreHook.

The position in the middle of the redefinitions is a compromise: The user should be able to provide his own (perhaps better) redefinitions, but some commands should have their original meaning, because they can be used in the hook (\bgroup, or @protected@testopt, and @ifnextchar for \renewcommand).

```
484 \Hy@pdfstringtrue  
485 \pdfstringdefPreHook
```

Spaces. For checking the token of the string, spaces must be masked, because they cannot be caught by undelimited arguments.

```
486      \HyPsd@LetUnexpandableSpace\space
487      \HyPsd@LetUnexpandableSpace\ %
488      \HyPsd@LetUnexpandableSpace~%
489      \HyPsd@LetUnexpandableSpace\nobreakspace
```

Package `xspace`.

```
490      \@ifundefined{@xspace}{%
491          \let\xspace\HyPsd@ITALCORR
492      }{%
493          \let\xspace\HyPsd@XSPACE
494      }%
495      \let\@\HyPsd@ITALCORR
496      \let\bgroup\%
497      \let\egroup\%
```

Redefinitions of miscellaneous commands. Hyphenation does not make sense.

```
498      \let\discretionary@gobbletwo
\@ifstar is defined in LATEX as follows:
```

```
\def\@ifstar#1{\@ifnextchar *{\@firstoftwo{#1}}}
```

`\@ifnextchar` doesn't work, because it uses stomach commands like `\let` and `\futurelet`. But it doesn't break. Whereas `\@firstoftwo{#1}` gives an error message because `\@firstoftwo` misses its second argument.

A mimicry of `\@ifnextchar` only with expandible commands would be very extensive and the result would be only an approximation. So here a cheaper solution follows in order to get rid of the error message at least:

```
499      \let\@ifnextchar\HyPsd@ifnextchar
500      \let\@ifnextchar\HyPsd@new@ifnextchar
501      \let\@protected@testopt\HyPsd@protected@testopt
```

6.2.2 Expansion

There are several possibilities to expand tokens within L^AT_EX:

`\protected@edef`: The weakest form isn't usable, because it does not expand the font encoding commands. They are made robust and protect themselves.

`\csname`: First the string is expanded whithin a `\csname` and `\endcsname`. Then the command name is converted to characters with catcode 12 by `\string` and the first escape character removed by `\@gobble`. This method has the great *advantage* that stomach tokens that aren't allowed in PDF strings are detected by T_EX and reported as errors in order to force the user to write correct things. So he get no wrong results by forgetting the proofreading of his text. But the *disadvantage* is that old wrong code cannot processed without errors. Mainly the error message is very cryptic and for the normal user hard to understand. T_EX provides no way to catch the error caused by `\csname` or allows to support the user with a descriptive error message. Therefore the experienced user had to enable this behaviour by an option `exactdef` in previous versions less or equal 6.50.

`\edef` This version uses this standard form for expansion. It is stronger than L^AT_EX's `\protected@edef`. So the font encoding mechanism works and the glyph commands are converted to the correct tokens for PDF strings whith the definitions of

the PD1 encoding. Because the protecting mechanism of L^AT_EX doesn't work within an \edef, there are situations thinkable where code can break. For example, assignments and definitions aren't performed and so undefined command errors or argument parsing errors can occur. But this is only a compatibility problem with old texts. Now there are possibilities to write code that gives correct PDF strings (see \texorpdfstring). In the most cases unexpandable commands and tokens (math shift, grouping characters) remains. They don't cause an error like with \csname. However a PDF reader isn't T_EX, so these tokens are viewed verbatim. So this version detects them now, and removes them with an descriptive warning for the user. As additional features xspace support is possible and grouping characters can be used without problems, because they are removed silently.

Generic messages. While expanding via \xdef the \Generic... messages don't work and causes problems (error messages, invalid .out file). So they are disabled while expanding and removed silently, because a user warning would be too expensive (memory and runtime, \pdfstringdef is slow enough).

```
502      \begingroup
503          \let\GenericError\@gobblefour
504          \let\GenericWarning\@gobbletwo
505          \let\GenericInfo\@gobbletwo
```

Package french. This fix only works, if \GenericError is disabled.

```
506      \ifx\nofrenchguillemets\@undefined
507          \else
508              \nofrenchguillemets
509          \fi
```

Definition commands and expansion. Redefining the defining commands (see sec. 6.5.10). The original meaning of \xdef is saved in \Hy@temp.

```
510      \let\Hy@temp\xdef
511      \let\def\HyPsd@DefCommand
512      \let\gdef\HyPsd@DefCommand
513      \let\edef\HyPsd@DefCommand
514      \let\xdef\HyPsd@DefCommand
515      \let\futurelet\HyPsd@LetCommand
516      \let\let\HyPsd@LetCommand
517      \Hy@temp#1{#2}%
518  \endgroup
```

6.2.3 Postprocessing

If the string is empty time can be saved by omitting the postprocessing process.

```
519      \ifx#1\@empty
520          \else
```

Protecting spaces and removing grouping characters. In order to check the tokens we must separate them. This will be done with T_EX's argument parsing. With this method we must the following item takes into account, that makes makes things a litte more complicate:

- T_EX does not accept a space as an undelimited argument, it cancels space tokens while looking for an undelimited argument. Therefore we must protect the spaces now.

- An argument can be a single token or a group of many tokens. And within curly braces tokens aren't find by TeX's argument scanning process. Third curly braces as grouping characters cannot be expanded further, so they don't vanish by the string expansion above. So these characters with catcode 1 and 2 are removed in the following and replaced by an marker for the xspace support.
- TeX silently removes the outmost pair of braces of an argument. To prevent this on unwanted places, in the following the character | is appended to the string to make an outer brace to an inner one.

First the top level spaces are protected by replacing. Then the string is scanned to detect token groups. Each token group will now be space protected and again scanned for another token groups.

```

521      \HyPsd@ProtectSpaces#1%
522      \let\HyPsd@String\empty
523      \expandafter\HyPsd@RemoveBraces\expandafter{#1|}%
524      \global\let#1\HyPsd@String

```

Check tokens. After removing the spaces and the grouping characters the string now should only consists of the following tokens/catcodes:

- 0 command names with start with an escape character.
- 3 math shift
- 4 alignment tabs
- 6 parameter, but this is unlikely.
- 7 superscript
- 8 subscript
- 11 letter
- 12 other
- 13 commands that are active characters.

After \HyPsd@CheckCatcodes the command \HyPsd@RemoveMask is reused to remove the group protection character |. This character is needed to ensure that the string at least consists of one token if \HyPsd@CheckCatcodes is called.

Because of internal local assignments and tabulars group braces are used.

```

525      \let\HyPsd@SPACEOPTI\relax
526      {%
527          \let\HyPsd@String\empty
528          \expandafter\HyPsd@CheckCatcodes#1\HyPsd@End
529          \global\let#1\HyPsd@String
530      }%
531      \expandafter\HyPsd@RemoveMask\expandafter
532          |\expandafter\empty#1\HyPsd@End#1%

```

\HyPsd@CheckCatcodes should no have removed the tokens with catcode 3, 4, 7, and 8. Because a parameter token (6) would cause to many errors before, there should now be only tokens with catcodes 11 or 12. So I think there is no need for a safety step like:

```
\xdef#1{\expandafter\strip@prefix\meaning#1}%
```

Looking for wrong glyphs. The case that glyphs aren't defined in the PD1 encoding is caught above in such a way, that the glyph name and a marker is inserted into the string. Now we can safely scan the string for this marker and provide a descriptive warning.

```

533      \expandafter\HyPsd@Subst\expandafter{\HyPsd@GLYPHERR}{\relax}#1%
534      \let\HyPsd@String\empty
535      \expandafter\HyPsd@GlyphProcess#1\relax\empty
536      \global\let#1\HyPsd@String

```

Backslash. The double backslash disturbs parsing octal sequences, for example in an string like abc\\051 the sequence \\051 is detected although the second \ belongs to the first backslash.

```
537      \HyPsd@StringSubst{\\"}{\textbackslash#1}%
```

Spaces. All spaces have already the form \\040. The last postprocessing step will be an optimizing of the spaces, so we already introduce already the necessary command \\HyPsd@SPACEOPTI. But first it is defined to be \\relax in order to prevent a too early expansion by an \\edef. Secondly a \\relax serves as a marker for a token that is detected by \\xspace.

The code of frenchb.1df can produce an additional space before \\guillemotright, because \\lastskip and \\unskip do not work. Therefore it is removed here.

```
538      \ifHy@unicode
539          \expandafter\HyPsd@StringSubst\csname 80\\040\endcsname
540              \HyPsd@SPACEOPTI#1%
541          \edef\Hy@temp@a{\HyPsd@SPACEOPTI\HyPsd@SPACEOPTI\\80\\273}%
542          \expandafter\HyPsd@Subst\expandafter{\Hy@temp@a}%
543              {\HyPsd@SPACEOPTI\\80\\273}#1%
544      \else

549      \fi
```

Right parenthesis. Also \\xspace detects a right parenthesis. For the \\xspace support and the following parenthesis check the different parenthesis notations), \\), and \\051 are converted to one type \\) and before \\HyPsd@empty with the meaning of \\relax is introduced for \\xspace. By redefining to \\empty \\HyPsd@empty can easily removed later.

```
550      \ifHy@unicode
551          \HyPsd@StringSubst{\\"}{\\80\\051}#1%
552          \HyPsd@Subst{\\\80\\051}#1%
553          \let\HyPsd@empty\relax
554          \expandafter\HyPsd@StringSubst\csname 80\\051\endcsname
555              {\HyPsd@empty\\80\\051}#1%
556      \else
557          \HyPsd@StringSubst{\\"}{\\051}#1%
558          \HyPsd@Subst{\\\051}#1%
559          \let\HyPsd@empty\relax
560          \HyPsd@StringSubst{\\051}{\HyPsd@empty\string\\}#1%
561      \fi
```

Support for package xspace. \\xspace looks for the next token and decides if it expands to a space or not. Following tokens prevent its transformation to a space: Beginning and end of group, handled above by replacing by an italic correction, several punctuation marks, a closing parentheses, and several spaces.

Without package xspace there are tokens with catcode 11 and 12, \\HyPsd@empty and \\HyPsd@SPACEOPTI. With package xspace marker for the italic correction \/ and \\xspace come with. In the package xspace case the two markers are replaced by commands and an \\edef performs the \\xspace processing.

In the opposite of the original \\xspace \\HyPsd@xspace uses an argument instead of a \\futurelet, so we have to provide such an argument, if \\HyPsd@xspace comes last.

Because `\HyPsd@Subst` with several equal tokens (--) needs a safe last token, in both cases the string gets an additional `\HyPsd@empty`.

```

562      \expandafter\HyPsd@Subst\expandafter{/\}\HyPsd@empty#1%
563      \@ifundefined{@xspace}{%
564      }{%
565          \let\HyPsd@xspace\relax
566          \expandafter\HyPsd@Subst\expandafter
567              {\HyPsd@XSPACE}\HyPsd@xspace#1%
568          \let\HyPsd@xspace\HyPsd@doxspace
569      }%
570      \xdef#1{\#1\HyPsd@empty}%

```

Ligatures. \TeX forms ligatures in its stomach, but the PDF strings are treated only by \TeX 's mouth. The PDFDocEncoding contains some ligatures, but the current version 3 of the AcrobatReader lacks the fi and fl glyphs, and the Linux version lacks the emdash and endash glyphs. So the necessary code is provided here, but currently disabled, hoping that version 4 of the AcrobatReader is better. To break the ligatures the user can use an empty group, because it leads to an insertion of an `\HyPsd@empty`. If this ligature code will be enabled some day, then the italic correction should also break the ligatures. Currently this occurs only, if package `xspace` is loaded.

```

571 %      \HyPsd@Subst{---}\textemdash#1%
572 %      \HyPsd@Subst{--}\textendash#1%
573 %      \HyPsd@Subst{fi}\textfi#1%
574 %      \HyPsd@Subst{fl}\textfl#1%
575      \HyPsd@Subst{!'}\textexcldown#1%
576      \HyPsd@Subst{?'}\textquestiondown#1%

```

With the next `\edef` we get rid of the token `\HyPsd@empty`.

```
577      \let\HyPsd@empty\empty
```

Left parentheses. Left parentheses are now converted to safe forms to avoid problems with unmatched ones (\(with PDFDocEncoding, the octal sequence with Unicode.

An optimization is possible. Matched parentheses can replaced by a () pair. But this code is removed to save \TeX memory and time.

```

578      \ifHy@unicode
579          \HyPsd@StringSubst{(\textparenleft#1%
580          \HyPsd@Subst{(\textparenleft#1%
581      \else
582          \HyPsd@StringSubst{(\{\050}#1%
583          \HyPsd@Subst{(\{\050}#1%
584          \HyPsd@StringSubst{\050}{\string\()#1%
585      \fi

```

Optimizing spaces. Spaces are often used, but they have a very long form \040. They are converted back to real spaces, but not all, so that no space follows after another. In the bookmark case several spaces are written to the .out file, but if the entries are read back, several spaces are merged to a single one.

With Unicode the spaces are replaced by their octal sequences.

```

586      \ifHy@unicode
587          \edef\HyPsd@SPACEOPTI{\80\040}%
588      \else
589          \let\HyPsd@SPACEOPTI\HyPsd@spaceopti
590      \fi
591      \xdef#1{\#1\empty}%
592      \fi

```

Converting to Unicode. At last the eight bit letters have to be converted to Unicode, the masks \8 and \9 are removed and the Unicode marker is added.

```

593   \endgroup

616 }
```

6.3 Encodings

6.3.1 PD1 encoding

The PD1 encoding implements the PDFDocEncoding for use with L^AT_EX 2 _{ε} 's NFSS. Because the informational strings are not set by T_EX's typesetting mechanism but for interpreting by the PDF reader, the glyphs of the PD1 encoding are implemented to be safely written to a file (PDF output file, .out file).

The PD1 encoding can be specified as an option of the 'fontenc' package or loaded here. It does not matter what font family is selected, as T_EX does not process it anyway. So use CM.

```

617 \@ifundefined{T@PD1}{\input{pd1enc.def}}{}
618 \DeclareFontFamily{PD1}{pdf}{}{%
619 \DeclareFontShape{PD1}{pdf}{m}{n}{<->cmr10}{}%
620 \DeclareFontSubstitution{PD1}{pdf}{m}{n}

```

6.3.2 PU encoding

The PU encoding implements the Unicode encoding for use with L^AT_EX's NFSS. Because of large memory requirements the encoding file for Unicode support is only loaded, if option `unicode` is specified as package option.

\HyPsd@InitUnicode Because the file puenc.def takes a lot of memory, the loading is defined in the macro \HyPsd@InitUnicode called by the package option unicode.

```

621 \def\HyPsd@InitUnicode{%
622   \@ifundefined{T@PU}{\input{puenc.def}}{}%
623   \DeclareFontFamily{PU}{pdf}{}%
624   \DeclareFontShape{PU}{pdf}{m}{n}{<->cmr10}{}%
625   \DeclareFontSubstitution{PU}{pdf}{m}{n}%
626   \let\HyPsd@InitUnicode\relax
627 }
```

6.4 Additional user commands

6.4.1 \texorpdfstring

\texorpdfstring While expanding the string in \pdfstringdef the switch \ifHy@pdfstring is set. This is used by the full expandible macro \texorpdfstring. It expects two arguments, the first contains the string that will be set and processed by TeX's stomach, the second contains the replacement for PDF strings.

```

628 \newcommand*\texorpdfstring{%
629   \ifHy@pdfstring
630     \expandafter\@secondoftwo
631   \else
632     \expandafter\@firstoftwo
633   \fi
634 }
```

6.4.2 Hooks for \pdfstringdef

\pdfstringdefPreHook Default definition of the hooks for \pdfstringdef. The construct \@ifundefined with \let is a little bit faster than \providecommand.

```

635 \@ifundefined{pdfstringdefPreHook}{%
636   \let\pdfstringdefPreHook\empty
637 }{%
638 \@ifundefined{pdfstringdefPostHook}{%
639   \let\pdfstringdefPostHook\gobble
640 }}
```

\pdfstringdefDisableCommands In \pdfstringdefPreHook the user can add code that is executed before the string, that have to be converted by \pdfstringdef, is expanded. So replacements for problematic macros can be given. The code in \pdfstringdefPreHook should not be replaced perhaps by an \renewcommand, because a previous meaning gets lost.

Macro \pdfstringdefDisableCommands avoids this, because it reuses the old meaning of the hook and appends the new code to \pdfstringdefPreHook, e.g.:

```
\pdfstringdefDisableCommands{%
  \let~\textasciitilde
  \def\url{\pdfstringdefWarn\url}%
  \let\textcolor\gobble
}
```

In the argument of \pdfstringdefDisableCommands the character @ can be used in command names. So it is easy to use useful L^AT_EX commands like \gobble or \@firstofone.

```

641 \def\pdfstringdefDisableCommands{%
642   \begingroup
643     \makeatletter
```

```

644     \HyPsd@DisableCommands
645 }

\HyPsd@DisableCommands

646 \long\def\HyPsd@DisableCommands#1{%
647     \toks0=\expandafter{\pdfstringdefPreHook}%
648     \toks1={#1}%
649     \xdef\pdfstringdefPreHook{\the\toks0 \the\toks1}%
650 \endgroup
651 }

```

\pdfstringdefWarn The purpose of \pdfstringdefWarn is to produce a warning message, so the user can see, that something can go wrong with the conversion to PDF strings.

The prefix \<>- is added to the token. \noexpand protects the probably undefined one during the first expansion step. Then \HyPsd@CheckCatcodes can detect the not allowed token, \HyPsd@CatcodeWarning prints a warning message, after \HyPsd@RemovePrefix has removed the prefix.

\pdfstringdefWarn is intended for document authors or package writers, examples for use can be seen in the definition of \HyPsd@ifnextchar or \HyPsd@protected@testopt.

```

652 \def\pdfstringdefWarn#1{%
653     \expandafter\noexpand\csname<>-\string#1\endcsname
654 }

```

6.5.2 CJK bookmarks

\HyPsd@CJKhook Some internal commands of package cjk are redefined to avoid error messages. For a rudimental support of CJK bookmarks the active characters are redefined so that they print themselves.

After preprocessing of Big5 encoded data the following string for a double-byte character is emitted:

```
^^7f<arg1>^^7f<arg2>^^7f
```

<arg1> is the first byte in the range (always > 0x80); <arg2> is the second byte in decimal notation ($\geq 0x40$).

```

879 \begingroup
880   \catcode"7F=\active

6.5.3 \@inmathwarn-Patch

\HyPsd@inmathwarn

The patch of \@inmathwarn is needed to get rid of the infinite error loop with glyphs of other encodings (see the explanation above). Potentially the patch is dangerous, if the code in `ltoutenc.dtx` changes. Checked with $\text{\LaTeX} 2_{\varepsilon}$ versions [1998/06/01] and [1998/12/01]. I expect that versions below [1995/12/01] don't work.

To understand the patch easier, the original code of \@current@cmd and \@changed@cmd follows ($\text{\LaTeX} 2_{\varepsilon}$ release [1998/12/01]). In the normal case \pdfstringdef is executed in a context where \protect has the meaning of \@typesetprotect (= \relax).

```

\def\@current@cmd#1{%
  \ifx\protect\@typeset@protect
    \@inmathwarn#1%
  \else
    \noexpand#1\expandafter\@gobble
  \fi}
\def\@changed@cmd#1#2{%
  \ifx\protect\@typeset@protect
    \@inmathwarn#1%
    \expandafter\ifx\csname\cf@encoding\string#1\endcsname\relax
      \expandafter\ifx\csname ?\string#1\endcsname\relax
        \expandafter\def\csname ?\string#1\endcsname{%
          \TextSymbolUnavailable#1%
        }%
      \fi
      \global\expandafter\let
        \csname\cf@encoding\string#1\expandafter\endcsname
        \csname ?\string#1\endcsname
    \fi
    \csname\cf@encoding\string#1%
      \expandafter\endcsname
  \else
    \noexpand#1%
  \fi}
\gdef\TextSymbolUnavailable#1{%
  \@latex@error{%

6.5.4 \add@accent-Patch

Unknown composite characters are built with \add@accent, so it is redefined to provide a warning.

```

\HyPsd@add@accent
970 \def\HyPsd@add@accent#1#2{%
971     \HyPsd@GLYPHERR\expandafter\@gobble\string#1+\string#2>%
972     #2%
973 }%

```

6.5.5 Unexpandable spaces

\HyPsd@LetUnexpandableSpace In \HyPsd@@ProtectSpaces the space tokens are replaced by not expandable commands, that work like spaces:

- So they can caught by undelimited arguments.
- And they work in number, dimen, and skip assignments.

These properties are used in \HyPsd@CheckCatcodes.

```

974 \def\HyPsd@LetUnexpandableSpace#1{%
975     \expandafter\futurelet\expandafter#1\expandafter\@gobble\space\relax
976 }%

```

\HyPsd@UnexpandableSpace \HyPsd@UnexpandableSpace is used in \HyPsd@@ProtectSpaces. In \yPsd@@ProtectSpaces the space tokens are replaced by unexpandable commands \HyPsd@UnexpandableSpace, but that have the effect of spaces.

```
977 \HyPsd@LetUnexpandableSpace\HyPsd@UnexpandableSpace
```

6.5.6 Marker for commands

\HyPsd@XSPACE
\HyPsd@ITALCORR
\HyPsd@GLYPHERR Some commands and informations cannot be utilized before the string expansion and the checking process. Command names are filtered out, so we need another way to transport the information: An unusual # with catcode 12 marks the beginning of the extra information.

```

978 \edef\HyPsd@XSPACE{\string#\string X}
979 \edef\HyPsd@ITALCORR{\string#\string I}
980 \edef\HyPsd@GLYPHERR{\string#\string G}

```

6.5.7 \hspace fix

```

\HyPsd@hspace
981 \def\HyPsd@hspace#1{\HyPsd@@hspace#1*\END}%

```

\HyPsd@@hspace \HyPsd@@hspace checks whether \hspace is called in its star form.

```

982 \def\HyPsd@@hspace#1*#2\END{%
983     \ifx\#2\%
984         \HyPsd@hspacetest{#1}%

```

```

985   \else
986     \expandafter\HyPsd@hspacetest
987   \fi
988 }

\HyPsd@hspacetest \HyPsd@hspacetest replaces the \hspace by a space, if the length is greater than
zero.

989 \def\HyPsd@hspacetest#1{\ifdim#1>\z@\space\fi}

```

6.5.8 Fix for AMS classes

```

1073     }%
1074 }

```

6.5.10 Redefining the defining commands

Definitions aren't allowed, because they aren't executed in an only expanding context. So the command to be defined isn't defined and can perhaps be undefined. This would causes TeX to stop with an error message. With a deep trick it is possible to define commands in such a context: `\csname` does the job, it defines the command to be `\relax`, if it has no meaning.

Active characters cannot be defined with this trick. It is possible to define all undefined active characters (perhaps that they have the meaning of `\relax`). To avoid side effects this should be done in `\pdfstringdef` shortly before the `\xdef` job. But checking and defining all possible active characters of the full range (0 until 255) would take a while. `\pdfstringdef` is slow enough, so this isn't done.

`\HyPsd@DefCommand` and `\HyPsd@LetCommand` expands to the commands `\<def>-command` and `\<let>-command` with the meaning of `\def` and `\let`. So it is detected by `\HyPsd@CheckCatcodes` and the command name `\<def>-command` or `\<let>-command` should indicate a forbidden definition command.

The command to be defined is converted to a string and back to a command name with the help of `\csname`. If the command is already defined, `\noexpand` prevents a further expansion, even though the command would expand to legal stuff. If the command don't have the meaning of `\relax`, `\HyPsd@CheckCatcodes` will produce a warning. (The command itself can be legal, but the warning is legitimate because of the position after a defining command.)

The difference between `\HyPsd@DefCommand` and `\HyPsd@LetCommand` is that the first one also cancels this arguments, the parameter and definition text. The right side of the `\let` commands cannot be canceled with an undelimited parameter because of a possible space token after `\futurelet`.

To avoid unmachted `\if...` tokens, the cases `\let\if...\iftrue` and `\let\if...\iffalse` are checked and ignored.

```

1110     }%
1111 }

```

6.5.11 \ifnextchar

\HyPsd@ifnextchar In \pdfstringdef \ifnextchar is disabled via a \let command to save time. First a warning message is given, then the three arguments are canceled. \ifnextchar cannot work in a correct manner, because it uses \futurelet, but this is a stomach feature, that doesn't work in an expanding context.

```

1112 \def\HyPsd@ifnextchar{%
1113   \pdfstringdefWarn\ifnextchar
1114   \expandafter\@gobbletwo\@gobble
1115 }

```

\HyPsd@new@ifnextchar Package `amsgen.sty` redefines \ifstar using \new@ifnextchar instead of \ifnextchar. See bug report latex/3662.

```

1116 \def\HyPsd@new@ifnextchar{%
1117   \pdfstringdefWarn\new@ifnextchar
1118   \expandafter\@gobbletwo\@gobble
1119 }

```

6.5.12 \@protected@testopt@ifnextchar

\HyPsd@protected@testopt Macros with optional arguments doesn't work properly, because they call \ifnextchar to detect the optional argument (see the explanation of \HyPsd@ifnextchar). But a warning, that \ifnextchar doesn't work, doesn't help the user very much. Therefore \protected@testopt is also disabled, because its first argument is the problematic macro with the optional argument and it is called before \ifnextchar.

```

1120 \def\HyPsd@protected@testopt#1{%
1121   \pdfstringdefWarn#1%
1122   \@gobbletwo
1123 }

```

6.6 Help macros for postprocessing

6.6.1 Generic warning.

\HyPsd@Warning For several reasons \space is masked and does not have its normal meaning. But it is used in warning messages, so it is redefined locally:

```
1124 \def\HyPsd@Warning#1{%
1125   \begingroup
1126     \def\space{ }%
1127     \Hy@Warning{#1}%
1128   \endgroup
1129 }
```

6.6.2 Protecting spaces

```
1130 \RequirePackage{etexcmds}[2007/09/09]
1131 \ifetex@unexpanded
1132   \expandafter\@secondoftwo
1133 \else
1134   \expandafter\@firstoftwo
1135 \fi
1136 {%
```

\HyPsd@ProtectSpaces \HyPsd@ProtectSpaces calls with the expanded string \HyPsd@@ProtectSpacesFi. The expanded string is protected by | at the beginning and end of the expanded string. Because of this there can be no group at the beginning or end of the string and grouping characters are not removed by the call of \HyPsd@@ProtectSpacesFi.

```
1137 \def\HyPsd@ProtectSpaces#1{%
1138   \iftrue
1139     \expandafter\HyPsd@@ProtectSpacesFi
1140     \expandafter|\expandafter\empty\@empty#1| \HyPsd@End#1%
1141   \fi
1142 }%
```

\HyPsd@@ProtectSpacesFi The string can contain command tokens, so it is better to use an \def instead of an \edef.

```
1143 \def\HyPsd@@ProtectSpacesFi#1 #2\HyPsd@End#3\fif%
1144   \fi
1145   \ifx\scrollmode#2\scrollmode
1146     \HyPsd@RemoveMask#1\HyPsd@End#3%
1147   \else
1148     \gdef#3{\#1\HyPsd@UnexpandableSpace#2}%
1149     \expandafter\HyPsd@@ProtectSpacesFi#3\HyPsd@End#3%
1150   \fi
1151 }%
```

Remove mask.

\HyPsd@RemoveMask \HyPsd@RemoveMask removes the protecting |. It is used by \HyPsd@@ProtectSpacesFi and by the code in \pdfstringdef that removes the grouping characters.

```
1152 \def\HyPsd@RemoveMask|#1|\HyPsd@End#2{%
1153   \toks@\expandafter{#1}%
1154   \xdef#2{\the\toks@}%
1155 }%
1156 }%
1157 \let\HyPsd@fi\fi
1158 \def\HyPsd@ProtectSpaces#1{%
```

```

1159 \xdef#1{%
1160   \iftrue
1161     \expandafter\HyPsd@@ProtectSpacesFi
1162       \expandafter|\expandafter\@empty#1| %
1163     \HyPsd@fi
1164   }%
1165   \expandafter\HyPsd@RemoveMask#1\HyPsd@End#1%
1166 }%
1167 \def\HyPsd@@ProtectSpacesFi#1 #2\HyPsd@fi{%
1168   \fi
1169   \etex@unexpanded{#1}%
1170   \ifx\scrollmode#2\scrollmode
1171   \else
1172     \HyPsd@@ProtectSpacesFi\HyPsd@UnexpandableSpace#2%
1173   \HyPsd@fi
1174 }%
1175 \def\HyPsd@RemoveMask|#1|\HyPsd@End#2{%
1176   \xdef#2{\etex@unexpanded\expandafter{#1}}%
1177 }%
1178 }

```

6.6.3 Remove grouping braces

\HyPsd@RemoveBraces #1 contains the expanded string, the result will be locally written in command \HyPsd@String.

```

1179 \def\HyPsd@RemoveBraces#1{%
1180   \ifx\scrollmode#1\scrollmode
1181   \else
1182     \HyPsd@@RemoveBracesFi#1\HyPsd@End{#1}%
1183   \fi
1184 }

```

\HyPsd@@RemoveBraces \HyPsd@@RemoveBraces is called with the expanded string, the end marked by \HyPsd@End, the expanded string again, but enclosed in braces and the string command. The first expanded string is scanned by the parameter text #1#2. By a comparison with the original form in #3 we can decide whether #1 is a single token or a group. To avoid the case that #2 is a group, the string is extended by a | before.

While removing the grouping braces an italic correction marker is inserted for supporting package `xspace` and letting ligatures broken.

Because the string is already expanded, the \if commands should disappeared. So we can move some parts out of the argument of \Hy@ReturnAfterFi.

```

1185 \def\HyPsd@@RemoveBracesFi#1#2\HyPsd@End#3\fi{%
1186   \fi
1187   \def\Hy@temp@A{#1#2}%
1188   \def\Hy@temp@B{#3}%
1189   \ifx\Hy@temp@A\Hy@temp@B
1190     \expandafter\def\expandafter\HyPsd@String\expandafter{%
1191       \HyPsd@String#1%
1192     }%
1193   \ifx\scrollmode#2\scrollmode
1194   \else
1195     \Hy@ReturnAfterFiFiEnd{%
1196       \HyPsd@RemoveBraces{#2}%
1197     }%
1198   \fi
1199   \else
1200     \def\Hy@temp@A{#1}%

```

```

1201  \HyPsd@AppendItalcorr\HyPsd@String
1202  \ifx\Hy@temp@A\@empty
1203    \Hy@ReturnAfterElseFiFiEnd{%
1204      \HyPsd@RemoveBraces{#2}%
1205    }%
1206  \else
1207    \HyPsd@ProtectSpaces\Hy@temp@A
1208    \HyPsd@AppendItalcorr\Hy@temp@A

1210      \expandafter\HyPsd@RemoveBraces\expandafter
1211      {\Hy@temp@A#2}%
1212    }%
1213  \fi
1214 \fi
1215 \Hy@ReturnEnd
1216 }

```

\HyPsd@AppendItalcorr
\HyPsd@@AppendItalcorr The string can contain commands yet, so it is better to use \def instead of a shorter \edef. The two help macros limit the count of \expandafter.

```

1217 \def\HyPsd@AppendItalcorr#1{%
1218   \expandafter\HyPsd@@AppendItalcorr\expandafter{\}/#1%
1219 }
1220 \def\HyPsd@@AppendItalcorr#1#2{%
1221   \expandafter\def\expandafter#2\expandafter{#2#1}%
1222 }

```

6.6.4 Catcode check

Check catcodes.

\HyPsd@CheckCatcodes Because \ifcat expands its arguments, this is prevented by \noexpand. In case of command tokens and active characters \ifcat now sees a \relax. After protecting spaces and removing braces #1 should be a single token, no group of several tokens, nor an empty group. (So the \expandafter\relax between \ifcat and \noexpand is only for safety and it should be possible to remove it.)

\protect and \relax should be removed silently. But it is too dangerous and breaks some code giving them the meaning of \empty. So commands with the meaning of \protect are removed here. (\protect should have the meaning of \typeset@protect that is equal to \relax).

```

1223 \def\HyPsd@CheckCatcodes#1#2\HyPsd@Endf{%
1224   \global\let\HyPsd@Rest\relax

1378     removing '\@backslashchar#1'%
1379   }%
1380   \HyPsd@GlyphProcess#2\@empty
1381 }

```

Spaces.

- \HyPsd@spaceopti In the string the spaces are represented by \HyPsd@spaceopti tokens. Within an \edef it prints itself as a simple space and looks for its next argument. If another space follows, so it replaces the next \HyPsd@spaceopti by an protected space \040.

```
1382 \def\HyPsd@spaceopti#1{ % first space
1383   \ifx\HyPsd@spaceopti#1%
1384     \040%
1385   \else
1386     #1%
1387   \fi
1388 }%
```

6.6.6 Replacing tokens

- \HyPsd@Subst To save tokens \HyPsd@StringSubst is an wrapper for the command \HyPsd@Subst that does all the work: In string stored in command #3 it replaces the tokens #1 with #2.
 #1 Exact the tokens that should be replaced.
 #2 The replacement (don't need to be expanded).
 #3 Command with the string.

```
1389 \def\HyPsd@Subst#1#2#3{%
1390   \def\HyPsd@@ReplaceFi##1##2\END\fi{%
1391     \fi
1392     ##1%
1393     \ifx\scrollmode##2\scrollmode
1394       \else
1395         ##2%
1396         \HyPsd@@ReplaceFi##2\END
1397       \fi
1398   }%
1399   \xdef#3{%
1400     \iftrue
1401       \expandafter\HyPsd@@ReplaceFi#3#1\END
1402     \fi
1403   }%
1404 }
```

- \HyPsd@StringSubst To save tokens in \pdfstringdef \HyPsd@StringSubst is a wrapper, that expands argument #1 before calling \HyPsd@Subst.

```
1405 \def\HyPsd@StringSubst#1{%
1406   \expandafter\HyPsd@Subst\expandafter{\string#1}%
1407 }
```

6.6.7 Support for package xspace

- \HyPsd@doxspace \xspace does not work, because it uses a \futurelet that cannot be executed in TeX's mouth. So this implementation uses an argument to examine the next token. In a previous version I reused \@xspace, but this version is shorter and easier to understand.

```
1408 \def\HyPsd@doxspace#1{%
1409   \ifx#1\relax\else
1410     \ifx#1.\else
1411       \ifx#1:\else
1412         \ifx#1,\else
1413           \ifx#1;\else
1414             \ifx#1!\else
1415               \ifx#1?\else
```

```

1416      \ifx#1/\else
1417          \ifx#1-\else
1418              \ifx#1'\else

\HyPsd@@GetNextTwoTokens \TeX does only allow nine parameters, so we need another macro to get more arguments.

```

1485 \def\HyPsd@GetNextTwoTokens#1#2#3\END#4{%
1486   \xdef#4{#4#1#2}%
1487   \HyPsd@@ConvertToUnicode#3\END#4%
1488 }

```

6.6.9 Support for UTF-8 input encoding

After `\usepackage[utf8]{inputenc}` there are macros that expect the UTF-8 octets as arguments. Therefore we can calculate the PDF octal sequences directly. Because the PDF format is limited to UCS-2, conversion macros are needed for UTF-8 sequences with two and three octets only.

This calculation must be done in an expandable context, so we use $\text{e}\text{\TeX}_\text{here}$ for performance reasons. Unhappily the results of divisions are rounded. Thus a circumvention via `\dimexpr` is used, e.g.:

```

\numexpr 123/4\relax is replaced by
\number\dimexpr.25\dimexpr 123sp\relax\relax

1489 \begingroup\expandafter\expandafter\expandafter\endgroup
1490 \expandafter\ifx\csname numexpr\endcsname\relax
1491   \let\HyPsd@UTFviii\relax
1492 \else
1493   \def\HyPsd@UTFviii{%
1494     \let\UTFviii@two@octets\HyPsd@UTFviii@two
1495     \let\UTFviii@three@octets\HyPsd@UTFviii@three

```

```

1496     \let\unichar\HyPsd@unichar
1497 }%

```

The two octet form of UTF-8 110aaabb (A) and 10cccd (B) must be converted into octal numbers 00a and bcd. The result is $\backslash 8a\backslash bcd$ (with a, b, c, d as octal numbers). The conversion equations.

$$a := A/4 - 48 \quad (1)$$

$$b := A - 4 * (A/4) \quad (2)$$

$$c := B/8 - 8 * ((8 * (B/8))/8) \quad (3)$$

$$d := B - 8 * (B/8) \quad (4)$$

(5)

```

8 Help macros for links

Anchors get created on the baseline of where they occur. If an XYZ PDF view is set, this means that the link places the top of the screen *on the baseline* of the target. If this is an equation, for instance, it means that you cannot see anything. Some links, of course, are created at the start of environments, and so it works. To allow for this, anchors are raised, where possible, by some small amount. This defaults to `\baselineskip`, but users can set it to something else in two ways (thanks to Heiko Oberdiek for suggesting this):

1. Redefine `\HyperRaiseLinkDefault` to be eg the height of a `\strut`
2. Redefine `\HyperRaiseLinkHook` to do something complicated; it must give a value to `\HyperRaiseLinkLength`, which is what actually gets used

```

1666 \let\HyperRaiseLinkHook\@empty
1667 \def\HyperRaiseLinkDefault{\baselineskip}

```

`\HyperRaiseLinkHook` allows the user to reassign `\HyperRaiseLinkLength`.

```

1668 \def\Hy@raisedlink#1{%
1669   \ifvmode
1670     #1%
1671   \else

```

If we are going to PDF via HyperTeX \special commands, the dvips (-z option) processor does not know the *height* of a link, as it works solely on the position of the closing \special. If we use this option, the \special is raised up by the right amount, to fool the dvi processor.

```

The depth of the outlines is controlled by option `bookmarksdepth`. The option acts globally and distinguishes three cases:

- `bookmarksdepth`: Without value hyperref uses counter `tocdepth` (compatible behaviour and default).
- `bookmarksdepth=<number>`: the depth is set to `<number>`.
- `bookmarksdepth=<name>`: The `<name>` must not start with a number or minus sign. It is a document division name (part, chapter, section, ...). Internally the value of macro `\toclevel@<name>` is used.

The value of the `bordercolor` options are not processed by the `color` package. Therefore the value consists of space separated `rgb` numbers in the range 0 until 1.

Package `xcolor` provides `\XC@bordercolor` since version 1.1. If the two spaces in the color specification are missing, then the value is processed as color specification from package `xcolor` by using `\XC@bordercolor` (since `xcolor` 2004/05/09 v1.11, versions 2005/03/24 v2.02 until 2006/11/28 v2.10 do not work because of a bug that is fixed in 2007/01/21 v2.11).

To add flexibility, we will not use the ordinary processing of package options, but put them through the *keyval* package. This section was written by David Carlisle.

Package kvoptions is used for processing options that are given as key value pairs. The package provides \ProcessKeyvalOptions, formerly known as \ProcessOptionsWithKV.

```

2821 \RequirePackage{kvoptions}[2006/08/17]
    Add option tex4ht if package tex4ht is loaded.
2822 \@ifpackageloaded{tex4ht}{%
2823   \@ifpackagewith{hyperref}{tex4ht}{}{%

16 User hypertext macros

We need to normalise all user commands taking a URL argument; Within the argument the following special definitions apply: \#, \%, ~ produce #, %, ~ respectively. for consistency \~ produces ~ as well. At the *top level only* ie not within the argument of another command, you can use # and % unescaped, to produce themselves. even if, say, # is entered as # it will be converted to \# so it does not die if written to an aux file etc. \# will write as # locally while making \specials.

`\hyperref` is more complicated, as it includes the concept of a category of link, used to make the name. This is not really used in this package. `\hyperdef` sets up an anchor in the same way. They each have three parameters of category, linkname, and marked text, and `\hyperref` also has a first parameter of URL. If there is an optional first parameter to `\hyperdef`, it is the name of a L^AT_EX label which can be used in a short form of `\hyperref` later, to avoid remembering the name and category.

17 Underlying basic hypertext macros

Links have an optional type, a filename (possibly a URL), an internal name, and some marked text. (Caution: the internal name may contain babel shorthand characters.) If the second parameter is empty, its an internal link, otherwise we need to open another file or a URL. A link start has a type, and a URL.

```
3278 \def\hyper@@link{\let\Hy@reserved@a\relax
3279   \@ifnextchar[{\hyper@link@}{\hyper@link@[link]}%
3280 }
3281 \def\hyper@link@[#1]#2#3#4{%
3282   \begingroup
3283     \protected@edef\Hy@tempa{#2}%
3284     \Hy@safe@activestrue
3285     \edef\x{#3}%
3286     \ifx\Hy@tempa\empty
3287       \toks0{\hyper@link{#1}}%
3288     \else
3289       \toks0{\expandafter\hyper@readexternallink#2\\{#1}}%
3290     \fi
3291     \toks2{#4}%
3292     \edef\Hy@tempa{\the\toks2}%
3293     \edef\x{\endgroup
3294       \ifx\Hy@tempa\empty
3295         \noexpand\Hy@Warning{Suppressing empty link}%
3296       \else
3297         \the\toks0 {\x}{\the\toks2}%
3298       \fi
3299     }%
3300   \x
3301 }
```

The problem here is that the first (URL) parameter may be a local `file:` reference (in which case some browsers treat it differently) or a genuine URL, in which case we'll have to activate a real Web browser. Note that a simple name is also a URL, as that is interpreted as a relative file name. We have to worry about # signs in a local file as well.

```
3302 \def\hyper@readexternallink#1\\#2#3#4{%
```

Parameters are:

1. The URL or file name
2. The type
3. The internal name
4. The link string

We need to get the 1st parameter properly expanded, so we delimit the arguments rather than passing it inside a group.

```
3303   \expandafter\@hyper@readexternallink{#2}{#3}{#4}{#1}::\\{#1}%
3304 }
```

Now (potentially), we are passed: 1) The link type 2) The internal name, 3) the link string, 4) the URL type (http, mailto, file etc), 5) the URL details 6) anything after a real : in the URL 7) the whole URL again

```
3305 \def\@pdftempwordfile{file}%
3306 \def\@pdftempwordrun{run}%
3307 \def\@hyper@readexternallink#1#2#3#4:#5:#6\\#7{%
```

If there are no colons at all (#6 is blank), its a local file; if the URL type (#4) is blank, its probably a Mac filename, so treat it like a `file`: URL. The only flaw is if its a relative Mac path, with several colon-separated elements — then we lose. Such names must be prefixed with an explicit `dvi`:

```
3308  \ifx\\#6\\%
3309    \expandafter\@hyper@linkfile file:#7\\{#3}{#2}%
3310  \else
3311    \ifx\\#4\\%
3312      \expandafter\@hyper@linkfile file:#7\\{#3}{#2}%
3313  \else
```

If the URL type is ‘file’, pass it for local opening

```
3314    \def\@pdftempaf#4}%
3315    \ifx\@pdftempa\@pdftempwordfile
3316      \expandafter\@hyper@linkfile#7\\{#3}{#2}%
3317    \else
```

if it starts ‘run:’, its to launch an application.

```
3318    \ifx\@pdftempa\@pdftempwordrun
3319      \expandafter\@hyper@launch#7\\{#3}{#2}%
3320    \else
```

otherwise its a URL

```
3321      \hyper@linkurl{#3}{#7\ifx\\#2\\else\hyper@hash#2\fi}%
3322      \fi
3323      \fi
3324      \fi
3325  \fi
3326 }
```

By default, turn `run:` into `file`:

```
3327 \def\@hyper@launch run:#1\\#2#3{%
3328   \hyper@linkurl{#2}{%
3329     \Hy@linkfileprefix
3330     #1%
3331     \ifx\\#3\\%
3332     \else
3333       \hyper@hash
3334       #3%
3335     \fi
3336   }%
3337 }
```

D P Story `|story@uakron.edu|` pointed out that relative paths starting .. fell over. Switched to using `\filename@parse` to solve this.

```
3338 \def\@hyper@linkfile file:#1\\#2#3{%
3339   %file url,link string, name
3340   \filename@parse{#1}%
3341   \ifx\filename@ext\relax
3342     \edef\filename@ext{\XR@ext}%
3343   \fi
3344   \def\use@file{\filename@area\filename@base.\filename@ext}%
3345   \ifx\filename@ext\XR@ext
3346     \hyper@linkfile{#2}{\use@file}{#3}%
3347   \else
3348     \ifx\@baseurl\empty
3349       \hyper@linkurl{#2}{%
3350         \Hy@linkfileprefix\use@file\ifx\\#3\\else\hyper@hash#3\fi
3351       }%
```

```

3352     \else
3353         \hyper@linkurl{#2}{\use@file\ifx\\#3\\\else\hyper@hash#3\fi}%
3354     \fi
3355 \fi
3356 }

```

Anchors have a name, and marked text. We have to be careful with the marked text, as if we break off part of something to put a \special around it, all hell breaks loose. Therefore, we check the category code of the first token, and only proceed if its safe. Tanmoy sorted this out.

A curious case arises if the original parameter was in braces. That means that #2 comes here a multiple letters, and the noexpand just looks at the first one, putting the rest in the output. Yuck.

```

18 Compatibility with the *L^AT_EX2html* package

Map our macro names on to Nikos', so that documents prepared for that system will work without change.

Note, however, that the whole complicated structure for segmenting documents is not supported; it is assumed that the user will load *html.sty* first, and then *hyperref.sty*, so that the definitions in *html.sty* take effect, and are then overridden in a few circumstances by this package.

```
3390 \let\htmladdimg\hyperimage
```

```

3391 \def\htmladdnormallink#1#2{\href{#2}{#1}}
3392 \def\htmladdnormallinkfoot#1#2{\href{#2}{#1}\footnote{#2}}
3393 \def\htmlref#1#2{%
  anchor text, label
  \label@hyperref [#2]{#1}%
}
3395 }

```

This is really too much. The `LATEX2HTML` package defines its own `\hyperref` command, with a different syntax. Was this always here? Its weird, anyway. We interpret it in the ‘printed’ way, since we are about fidelity to the page.

```

3396 \def\@@latextohtmlx{%
3397   \let\hhyperref\hyperref
3398   \def\hyperref##1##2##3##4{%
    anchor text for HTML
    % text to print before label in print
    % label
    % post-label text in print
  ##2\ref{##4}##3%
}
3403 }%
3404 }

```

19 Forms creation

Allow for creation of PDF or HTML forms. The effects here are limited somewhat by the need to support both output formats, so it may not be as clever as something which only wants to make PDF forms.

I (Sebastian) could not have started this without the encouragement of T V Raman.

19.1 Field flags

The field flags are organized in a bit set.

```
3405 \RequirePackage{bitset}
```

Each flag has a option name, an `\if` switch, and a bit position. The default is always ‘false’, the flag is clear. This is also the default of the switch created by `\newif`.

The names of the flags in the PDF specification (1.7) are used as lowercase option names.

```

\HyField@NewFlag #1: type: F annot flags, Ff field flags
#2: PDF name
#3: PDF position
3406 \def\HyField@NewFlag#1#2{%
3407   \lowercase{\HyField@NewOption{#2}}%
3408   \lowercase{\HyField@NewBitsetFlag{#2}{#2}{#1}}%
}
3409 }

```

```

\HyField@NewFlagOnly
3410 \def\HyField@NewFlagOnly#1#2{%
3411   \lowercase{\HyField@NewBitsetFlag{#2}{#2}{#1}}%
}
3412 }

```

```

\HyField@NewOption #1: option name
3413 \def\HyField@NewOption#1{%
3414   \expandafter\newif\csname ifFld@#1\endcsname
3415   \define@key{Field}{#1}[true]{%
3416     \lowercase{\Field@boolkey{##1}{#1}}%
}
3417 }
3418 }

```

\HyField@NewBitsetFlag Package ‘bitset’ uses zero based positions, the PDF specification starts with one.
#1: option
#2: PDF name
#3: type: F annot flags, Ff field flags
#4: PDF position

3501 \HyField@NewFlag{Ff}{CommitOnSelChange}{27}%

```

Signature fields are not supported.

Until 6.76i hyperref uses field option ‘combo’ to set three flags ‘Combo’, ‘Edit’, and ‘Sort’. Option ‘popdown’ sets flag ‘Combo’ only.

```

3502 \newif\ifFld@popdown
3503 \define@key{Field}{popdown}[true]{%

```

```

3504 \lowercase{\Field@boolkey{#1}{popdown}%
3505 }

```

Annotation flags. The form objects are widget annotations. There are two flags for readonly settings, the one in the annotation flags is ignored, instead the other in the field flags is used.

Flag Print is not much useful, because hyperref do not use the appearance entry of the annotations for most fields.

22 Localized nullifying of package

Sometimes we just don't want the wretched package interfering with us. Define an environment we can put in manually, or include in a style file, which stops the hypertext functions doing anything. This is used, for instance, in the Elsevier classes, to stop `hyperref` playing havoc in the front matter.

```

```

23 Package nohyperref

This package is introduced by Sebastian Rahtz.

Package nohyperref is a dummy package that defines some low level and some top-level commands. It is done for jadetex, which calls hyperref low-level commands, but it would also be useful with people using normal hyperref, who really do not want the package loaded at all.

Some low-level commands:

```

4185 <*nohyperref>
4186 \let\hyper@@anchor@gobble
4187 \def\hyper@link#1#2#3{#3}%
4188 \let\hyper@anchorstart@gobble
4189 \let\hyper@anchorend\empty
4190 \let\hyper@linkstart@gobbletwo
4191 \let\hyper@linkend\empty
4192 \def\hyper@linkurl##1##2{##1}%
4193 \def\hyper@linkfile##1##2##3{##1}%
4194 \def\hyper@link@link@##1##2##3{}%
4195 \let\PDF@SetupDoc\empty
4196 \let\PDF@FinishDoc\empty

```

Some top-level commands:

```

4197 \let\Acrobatmenu@gobble
4198 \let\pdfstringdefDisableCommands@gobbletwo
4199 \let\texorpdfstring@firstoftwo
4200 \let\pdfbookmark@undefined
4201 \newcommand\pdfbookmark[3][]{}
4202 \let\phantomsection\empty
4203 \let\hypersetup@gobble
4204 \let\hyperbaseurl@gobble
4205 \let\href@gobble
4206 \let\hyperdef@gobbletwo
4207 \let\hyperlink@gobble
4208 \let\hypertarget@gobble
4209 \def\hyperref{%
4210   \@ifnextchar[\@gobbleopt{\expandafter\@gobbletwo\@gobble}%
4211 }
4212 \long\def\@gobbleopt[#1]{}
4213 \let\hyperpage\empty
4214 </nohyperref>

```

24 The Mangling Of Aux and Toc Files

Some extra tests so that the hyperref package may be removed or added to a document without having to remove .aux and .toc files (this section is by David Carlisle) All the code is delayed to `\begin{document}`

```
4215 <*package>
4216 \AfterBeginDocument{%
```

First the code to deal with removing the hyperref package from a document.

Write some stuff into the aux file so if the next run is done without hyperref, then `\contentsline` and `\newlabel` are defined to cope with the extra arguments.

```
4217 \if@filesw
4218   \ifHy@typexml
4219     \immediate\closeout\mainaux
4220     \immediate\openout\mainaux\jobname.aux\relax
4221     \immediate\write\auxout{<relaxxml>\relax}%
4222   \fi
4223   \immediate\write\auxout{%
4224     \string\ifx\string\hyper@anchor\string@\undefined^^J%
4225       \global\let\string\oldcontentsline\string\contentsline^^J%
4226       \gdef\string\contentsline{%
4227         \string#1\string#2\string#3\string#4{%
4228           \string\oldcontentsline{%
4229             {\string#1}{\string#2}{\string#3}}^^J%
4230           \global\let\string\oldnewlabel\string\newlabel^^J%
4231           \gdef\string\newlabel\string#1\string#2{%
4232             \string\newlabelxxx{\string#1}\string#2}^^J%
4233           \gdef\string\newlabelxxx{%
4234             \string#1\string#2\string#3\string#4\string#5\string#6{%
4235               \string\oldnewlabel{\string#1}{\string#2}{\string#3}}}}^^J%
```

But the new aux file will be read again at the end, with the normal definitions expected, so better put things back as they were.

```
4236   \string\AtEndDocument{%
4237     \let\string\contentsline\string\oldcontentsline^^J%
4238     \let\string\newlabel\string\oldnewlabel}^^J%
```

If the document is being run with hyperref put this definition into the aux file, so we can spot it on the next run.

```
4239   \string\else^^J%
4240     \global\let\string\hyper@last\relax^^J%
4241   \string\fi^^J%
4242 }%
4243 \fi
```

Now the code to deal with adding the hyperref package to a document with aux and toc written the standard way.

If hyperref was used last time, do nothing. If it was not used, or an old version of hyperref was used, don't use that TOC at all but generate a warning. Not ideal, but better than failing with pre-5.0 hyperref TOCs.

```
4244 \ifx\hyper@last\@undefined
4245   \def\@starttoc#1{%
4246     \begingroup
4247       \makeatletter
4248       \IfFileExists{\jobname.#1}{%
4249         \Hy@WarningNoLine{%
4250           old #1 file detected, not used; run LaTeX again}%
```

```

4251      }%
4252      }{ }%
4253      \if@filesw
4254          \expandafter\newwrite\csname tf@\#1\endcsname
4255          \immediate\openout\csname tf@\#1\endcsname \jobname.\#1\relax
4256      \fi
4257      \nobreakfalse
4258      \endgroup
4259      }%
4260      \def\newlabel#1#2{\@newl@bel r{#1}{#2}{ }{}{}{}}
4261  \fi
4262 }

```

25 Title strings

4301 \Hy@DisableOption{pdfusetitle}

```

Macro \Hy@UseMaketitleInfos is used in the driver files, before the information entries are used.

The newline macro \newline or \\ is much more complicate. In the title a good replacement can be a space, but can be already a space after \\ in the title string. So this space is removed by scanning for the next non-empty argument.

In the macro \author the newline can perhaps separate the different authors, so the newline expands here to a comma with space.

The possible arguments such as space or the optional argument after the newline macros are not detected.

```

28 Automated L^AT_EX hypertext cross-references

Anything which can be referenced advances some counter; we overload this to put in a hypertext starting point (with no visible anchor), and make a note of that for later use in \label. This will fail badly if \theH<name> does not expand to a sensible reference. This means that classes or package which introduce new elements need to define an equivalent \theH<name> for every \the<name>. We do make a trap to make \theH<name> be the same as \arabic{<name>}, if \theH<name> is not defined, but this is not necessarily a good idea. Alternatively, the ‘naturalnames’ option uses whatever L^AT_EX provides, which may be useable. But then its up to you to make sure these are legal PDF and HTML names. The ‘hypertexnames=false’ option just makes up arbitrary names.

All the shenanigans is to make sure section numbers etc are always arabic, separated by dots. Who knows how people will set up \currentlabel? If they put spaces in, or brackets (quite legal) then the hypertext processors will get upset.

But this is flaky, and open to abuse. Styles like subeqn will mess it up, for starters. Appendices are an issue, too. We just hope to cover most situations. We can at least cope with the standard sectioning structure, allowing for \part and \chapter.

Start with a fallback for equations

```

```

```
4637 \let\theHmpfootnote\theHHfootnote
```

Tanmoy asked for this default handling of undefined `\theH<name>` situations. It really isn't clear what would be ideal, whether to turn off hyperizing of unknown elements, to pick up the textual definition of the counter, or to default it to something like `\arabic{name}`. We take the latter course, slightly worriedly.

```
4638 \let\H@refstepcounter\refstepcounter
4639 \edef\name@of@eq{equation}%
4640 \edef\name@of@slide{slide}%
```

We do not want the handler for `\refstepcounter` to cut in during the processing of `\item` (we handle that separately), so we provide a bypass conditional.

```
4641 \newif\if@hyper@item
4642 \newif\if@skiphyperref

After `\appendix` “chapter” (or “section” for classes without chapter) should be replaced by “appendix” to get `\autoref` work. Macro `\Hy@chapapp` contains the current valid name like `\@chapapp`, which cannot be used, because this string depends on the current language.

The “french” package defines counter `\thechapter` by `\newcounterchapter`, if `\@ifundefined{chapter}`.

```

29 Package lastpage support

Package `lastpage` directly writes the `\newlabel` command to the aux file. Because package `hyperref` requires additional arguments, the internal command `\lastpage@putlabel` is redefined. The patch is deferred by `\AtBeginDocument`, because it is possible that package `lastpage` is loaded after package `hyperref`. The same algorithm (options `hypertexnames` and `plainpages`) is used to get the page anchor name as in `\Hy@EveryPageAnchor` (see sec. 38). The link will not work if option `pageanchor` is set to false.

```

\lastpage@putlabel

```

34 Equations

We want to make the whole equation a target anchor. Overload equation, temporarily reverting to original `\refstepcounter`. If, however, it is in AMS math, we do not do anything, as the tag mechanism is used there (see section 41). The exception is that we move the equation incrementation inside the math environment to avoid specials outside and a wrong vertical spacing of equation environments.

```

4863 \let\new@refstepcounter\refstepcounter
4864 \let\H@equation\equation
4865 \let\H@endequation\endequation

4866 \@ifpackageloaded{amsmath}{%

```

My goodness, why can't L^AT_EX be consistent? Why is `\eqnarray` set up differently from other objects?

People (you know who you are, Thomas Beuth) sometimes make an eqnarray where *all* the lines end with \notag, so there is no suitable anchor at all. In this case, pass by on the other side.

```

4899 \newif\if@eqnstar
4900 \@eqnstarfalse
4901 \let\H@eqnarray\eqnarray
4902 \let\H@endeqnarray\endeqnarray

4979 \fi

```

35 Footnotes

The footnote mark is a hypertext link, and the text is a target. We separately number the footnotes sequentially through the text, separately from whatever labels the text assigns. Too hard to keep track of markers otherwise. If the raw forms `\footnotemark` and `\footnotetext` are used, force them to use un-hyper original.

Tabularx causes footnote problems, disable the linking if that is loaded.

```

Redefine `\@footnotemark`, borrowing its code (at the cost of getting out of sync with `latex.ltx`), to take advantage of its white space and hyphenation fudges. If we just overload it, we can get variant documents (the word before the footnote is treated differently). Thanks to David Carlisle and Brian Ripley for confusing and helping me on this.

```

37 Bibliographic references

This is not very robust, since many styles redefine these things. The package used to redefine `\@citex` and the like; then we tried adding the `hyperref` call explicitly into the `.aux` file. Now we redefine `\bibcite`; this still breaks some citation packages so we have to work around them. But this remains extremely dangerous. Any or all of `achemso` and `drftcite` may break.

However, lets make an attempt to get `natbib` right, because thats a powerful, important package. Patrick Daly (`daly@linmpi.mpg.de`) has provided hooks for us, so all we need to do is activate them.

```

5253 \def\hyper@natlinkstart#1{%
5254   \Hy@backout{#1}%

```

Do not play games if we have `natbib` support. Macro `extra@binfo` added for `chapterbib` support. `Chapterbib` also wants `\@extra@binfo` in the hyper-link, but since the link tag is not expanded immediately, we use `\@extra@b@citeb`, so cites in a chapter will link to the bibliography in that chapter.

```

37.1 Package harvard

Override Peter Williams' Harvard package; we have to a) make each of the citation types into a link; b) make each citation write a backref entry, and c) kick off a backreference section for each bibliography entry.

The redefinitions have to be deferred to `\begin{document}`, because if `harvard.sty` is loaded and `html.sty` is present and detects `pdfTeX`, then `hyperref` is already loaded at the begin of `harvard.sty`, and the `\newcommand` macros causes error messages.

```

38 Page numbers

The last page should not contain a /Dur key, because there is no page after the last page. Therefore at the last page there should be a command \hypersetup{pdfpageduration={}}. This can be set with \AtEndDocument, but it can be too late, if the last page is already finished, or too early, if lots of float pages will follow. Therefore currently nothing is done by hyperref.

This where we supply a destination for each page.

```

5658 }
```

41 AMS^LA_TE_X compatibility

Oh, no, they don't use anything as simple as `\refstepcounter` in the AMS! We need to intercept some low-level operations of theirs. Damned if we are going to try and work out what they get up to. Just stick a label of 'AMS' on the front, and use the label *they* worked out. If that produces something invalid, I give up. They'll change all the code again anyway, I expect.

```

5659 \let\Hmake@df@tag@@\make@df@tag@@

```

41.1 \@addtoreset and \numberwithin patches

`\@addtoreset` puts a counter to the reset list of another counter. After a reset the counter starts again with perhaps already used values. Therefore the hyperref version of the counter print command `\theHcounter` is redefined in order to add the parent counter.

```

5681 \let\HyOrg@addtoreset\@addtoreset
5682 \def\@addtoreset#1#2{%
5683   \HyOrg@addtoreset{#1}{#2}%
5684   \expandafter\xdef\csname theH#1\endcsname{%

5686       \csname the\@ifundefined{theH#2}{\H#2}\endcsname
5687       .\noexpand\the\noexpand\value{#1}%
5688   }%
5689 }

```

`\numberwithin` A appropriate definition of hyperref's companion counter (`\theH...`) is added for correct link names.

```

5690 </package>

43 hyperindex entries

Internal command names are prefixed with \HyInd@.

Hyper-indexing works crudely, by forcing code onto the end of the index entry with the | feature; this puts a hyperlink around the printed page numbers. It will not proceed if the author has already used the | specifier for something like emboldening entries. That would make Makeindex fail (cannot have two | specifiers). The solution is for the author to use generic coding, and put in the requisite \hyperpage in his/her own macros along with the boldness.

This section is poor stuff; it's open to all sorts of abuse. Sensible large projects will design their own indexing macros any bypass this.

46.1 PS/PDF strings

Some drivers write PS or PDF strings. These strings are delimited by parentheses, therefore a lonely unmatched parenthesis must be avoided to avoid PS or PDF syntax errors. Also the backslash character itself has to be protected.

\Hy@pstringdef Therefore such strings should be passed through \Hy@pstringdef. The first argument holds a macro for the result, the second argument is the string that needs protecting. Since version 1.30.0 pdfTeX offers \pdfescapestring.

```

46.2 pdftex

6333 <*pdftex>

This driver is for Han The Thanh's TeX variant which produces PDF directly. This has new primitives to do PDF things, which usually translate almost directly to PDF code, so there is a lot of flexibility which we do not at present harness.

Set PDF version if requested by option pdfversion.

- pdfTeX 1.10a, 2003-01-16: \pdfoptionpdfminorversion
- pdfTeX 1.30, 2005-08-081: \pdfminorversion

```

6334 \let\Hy@pdfminorversion\relax
6335 \begingroup\expandafter\expandafter\expandafter\endgroup
6336 \expandafter\ifx\csname pdfminorversion\endcsname\relax
6337   \begingroup\expandafter\expandafter\expandafter\endgroup
6338   \expandafter\ifx\csname pdfoptionpdfminorversion\endcsname\relax
6339   \else
6340     \def\Hy@pdfminorversion{\pdfoptionpdfminorversion}%
6341   \fi
6342 \else
6343   \def\Hy@pdfminorversion{\pdfminorversion}%
6344 \fi
6345 \@ifundefined{Hy@pdfminorversion}{%
6346   \PackageInfo{hyperref}{%
6347     PDF version is not set, because pdfTeX is too old (<1.10a)}%
6348 }%
6349 }%
6350 \ifHy@setpdfversion
6351   \ifnum\Hy@pdfminorversion=\Hy@pdfversion\relax
6352   \else
6353     \Hy@pdfminorversion=\Hy@pdfversion\relax
6354   \fi
6355   \PackageInfo{hyperref}{%
6356     \expandafter\string\Hy@pdfminorversion
6357     :=\number\Hy@pdfversion\space
6358   }%
6359 \fi
6360 \edef\Hy@pdfversion{\number\Hy@pdfminorversion}%
6361 \Hy@DisableOption{pdfversion}%
6362 }

```

First, allow for some changes and additions to pdftex syntax:

```

6363 \def\setpdfinkmargin#1{\pdfinkmargin#1}
6364 \ifx\pdfstartlink\@undefined% less than version 14
6365   \let\pdfstartlink\pdfannotlink
6366   \let\pdfinkmargin\@tempdima
6367   \let\pdfxform\pdfform
6368   \let\pdflastxform\pdflastform
6369   \let\pdfrefxform\pdfrefform
6370 \else

```

```

6371   \pdflinkmargin1pt %
6372 \fi
First set up the default linking
6373 \providecommand*\@pdfview{XYZ}
First define the anchors:
6374 \def\new@pdflink#1{%
6375   \ifHy@verbose
6376     \typeout{pdftex: define anchor at line \the\inputlineno: #1}%
6377   \fi
6378   \Hy@SaveLastskip
6379   \Hy@pstringdef\Hy@pstringDest{#1}%
6380   \Hy@DestName\Hy@pstringDest\@pdfview
6381   \Hy@RestoreLastskip
6382 }
6383 \let\pdf@endanchor\empty

\Hy@DestName Wrap the call of \pdfdest name in \Hy@DestName. Then it can easier be caught by
package hypdestopt.
6384 \def\Hy@DestName#1#2{%
6385   \pdfdest name{#1}#2\relax
6386 }

Now the links; the interesting part here is the set of attributes which define how the
link looks. We probably want to add a border and color it, but there are other choices.
This directly translates to PDF code, so consult the manual for how to change this. We
will add an interface at some point.

46.3 `hypertex`

The Hyper \TeX specification (this is borrowed from an article by Arthur Smith) says that conformant viewers/translators must recognize the following set of `\special` commands:

```

href: html:<a href = "href_string">
name: html:<a name = "name_string">
end: html:</a>
image: html:<img src = "href_string">
base_name: html:<base href = "href_string">

```

The *href*, *name* and *end* commands are used to do the basic hypertext operations of establishing links between sections of documents. The *image* command is intended (as with current *html* viewers) to place an image of arbitrary graphical format on the page in the current location. The *base_name* command is be used to communicate to the *dvi* viewer the full (URL) location of the current document so that files specified by relative URL's may be retrieved correctly.

The *href* and *name* commands must be paired with an *end* command later in the \TeX file — the \TeX commands between the two ends of a pair form an *anchor* in the document. In the case of an *href* command, the *anchor* is to be highlighted in the *dvi* viewer, and when clicked on will cause the scene to shift to the destination specified by *href_string*. The *anchor* associated with a *name* command represents a possible location to which other hypertext links may refer, either as local references (of the form *href="#name_string* with the *name_string* identical to the one in the *name* command) or as part of a URL (of the form *URL#name_string*). Here *href_string* is a valid URL or local identifier, while *name_string* could be any string at all: the only caveat is that “” characters should be escaped with a backslash (\), and if it looks like a URL name it may cause problems.

```

46.4 dviwindo

[This was developed by David Carlisle]. Within a file dviwindo hyperlinking is used, for external URL's a call to \wwwbrowser is made. (You can define this command before or after loading the hyperref package if the default c:/netscape/netscape is not suitable) Dviwindo could in fact handle external links to dvi files on the same machine without calling a web browser, but that would mean parsing the URL to recognise such, and this is currently not done.

This was more or less blindly copied from the hypertex cfg. For dviwindo, L^AT_EX must specify the size of the active area for links. For some hooks this information is available but for some, the start and end of the link are specified separately in which case a fixed size area of 1000000sp wide by \baselineskip high is used.

```

VTeX version 6.68 supports `\mediawidth` and `\mediaheight`. The `\ifx` construct is better than a `\csname`, because it avoids the definition and the hash table entry of a previous undefined macro.

```
7556 \ifx\mediaheight\@undefined
7557 \else
7558   \ifx\mediaheight\relax
7559   \else
7560     \ifHy@setpagesize

The following code (transition effects) is made by Alex Kostin.

The code below makes sense for VTeX 7.02 or later.

Please never use `\@ifundefined{VTeXversion}{...}{...}` *globally*.

```

7755 \ifnum\Hy@VTeXversion<702 %
7756 \else
7757   \def\hyper@pagetransition{%
7758     \ifx\@pdfpagetransition\relax
7759     \else
7760       \ifx\@pdfpagetransition\@empty

```

Standard incantation.

1. Does an old entry have to be deleted? 2. If 1=yes, how to delete?

```

7761   \else
7762     \hvtex@parse@trans\@pdfpagetransition
7763   \fi
7764   \fi
7765 }%

```

I have to write an “honest” parser to convert raw PDF code into VTeX `\special{...}` (AVK)

Syntax of VTeX `\special{!trans <transition_effect>}`:

```

<transition_effect> ::= <transition_style>[,<transition_duration>]
<transition_style> ::= <Blinds_effect> | <Box_effect> |
                      <Dissolve_effect> | <Glitter_effect> |
                      <Split_effect> | <Wipe_effect>

```

```

<Blinds_effect> ::= B[<effect_dimension>]
<Box_effect> ::= X[<effect_motion>]
<Dissolve_effect> ::= D
<Glitter_effect> ::= G[<effect_direction>]
<Split_effect> ::= S[<effect_motion>][<effect_dimension>]
<Wipe_effect> ::= W[<effect_direction>]
<Replace_effect> ::= R
<effect_direction> ::= <number>
<effect_dimension> ::= H | V
<effect_motion> ::= I | O
<transition_duration> ::= <number>

```

Transition codes:

```

7766 \def\hvtex@trans@effect@Blinds{\def\hvtex@trans@code{B}}%
7767 \def\hvtex@trans@effect@Box{\def\hvtex@trans@code{X}}%
7768 \def\hvtex@trans@effect@Dissolve{\def\hvtex@trans@code{D}}%
7769 \def\hvtex@trans@effect@Glitter{\def\hvtex@trans@code{G}}%
7770 \def\hvtex@trans@effect@Split{\def\hvtex@trans@code{S}}%
7771 \def\hvtex@trans@effect@Wipe{\def\hvtex@trans@code{W}}%
7772 \def\hvtex@trans@effect@R{\def\hvtex@trans@code{R}}%

```

Optional parameters:

```

7773 \def\hvtex@par@dimension{/Dm}%
7774 \def\hvtex@par@direction{/Di}%
7775 \def\hvtex@par@duration{/D}%
7776 \def\hvtex@par@motion{/M}%

```

Tokenizer:

```
7777 \def\hvtex@gettoken{\expandafter\hvtex@gettoken@\hvtex@buffer@\nil}%
```

Notice that tokens in the input buffer must be space delimited.

```

7778 \def\hvtex@gettoken@#1 #2@\nil{%
7779   \edef\hvtex@token{#1}%
7780   \edef\hvtex@buffer{#2}%
7781 }%
7782 \def\hvtex@parse@trans#1{%

```

Initializing code:

```

7783 \let\hvtex@trans@code\empty
7784 \let\hvtex@param@dimension\empty
7785 \let\hvtex@param@direction\empty
7786 \let\hvtex@param@duration\empty
7787 \let\hvtex@param@motion\empty
7788 \edef\hvtex@buffer{#1\space}%

```

First token is the PDF transition name without escape.

```

7789 \hvtex@gettoken
7790 \ifx\hvtex@token\empty

```

Leading space(s)?

```
7791 \ifx\hvtex@buffer\empty
```

The buffer is empty, nothing to do.

```

7792 \else
7793   \hvtex@gettoken
7794 \fi
7795 \fi
7796 \csname hvtex@trans@effect@\hvtex@token\endcsname

```

Now is time to parse optional parameters.

```
7797     \hvtex@trans@params  
7798 }%
```

Reentrant macro to parse optional parameters.

```
7799 \def\hvtex@trans@params{  
7800   \ifx\hvtex@buffer\@empty  
7801   \else  
7802     \hvtex@gettoken

```

Caution: In opposite to the other drivers, the argument of `\special{!onopen #1}` is a reference name. The VTeX's postscript mode will work with a version higher than 7.0x.

The command `\VTeXOS` is defined since version 7.45. Magic values encode the operating system:

- 1: WinTel
- 2: Linux
- 3: OS/2
- 4: MacOS
- 5: MacOS/X

```

46.7 Fix for Adobe bug number 466320

If a destination occurs at the very begin of a page, the destination is moved to the previous page by Adobe Distiller 5. As workaround Adobe suggests:

```

/showpage {
    //showpage
    clippath stroke erasemode
} bind def

```

But unfortunately this fix generates an empty page at the end of the document. Therefore another fix is used by writing some clipped text.

```

7989 <dviwindo>\def\literalps@out#1{\special{ps:#1}%
7990 <package>\providecommand*\Hy@DistillerDestFix{}%
7991 <*pdfmark | dviwindo>
7992 \def\Hy@DistillerDestFix{%
7993   \begingroup
7994     \let\x\literalps@out

```

The fix has to be passed unchanged through GeX, if VTeX in PostScript mode with GeX is used.

```

46.8 Direct pdfmark support (dvipdf and pdfmark)

Drivers that load `pdfmark.def` have to provide the correct macro definitions of

<code>\@pdfproducer</code>	for document information
<code>\literalps@out</code>	PostScript output
<code>\headerps@out</code>	PostScript output that goes in the header area

and the correct definitions of the following PostScript procedures:

<code>H.S</code>	start of anchor, link or rect
<code>#1 H.A</code>	end of anchor, argument= <code>baselineskip</code> in pt
<code>#1 H.L</code>	end of link, argument= <code>baselineskip</code> in pt
<code>H.R</code>	end of rect
<code>H.B</code>	raw rect code

```

8319 {/pdfmark | dvipdf}
8320 {*pdfmarkbase | dvipdf}

```

We define a single macro, pdfmark, which uses the ‘keyval’ system to define the various allowable keys; these are *exactly* as listed in the pdfmark reference for Acrobat 3.0. The only addition is pdfmark which specifies the type of pdfmark to create (like ANN, LINK etc). The surrounding round and square brackets in the pdfmark commands are supplied, but you have to put in / characters as needed for the values.

```

8321 \newif\ifHy@pdfmarkerror
8322 \def\pdfmark{\@ifnextchar[{\@pdfmark@}{\@pdfmark@[]}}
8323 \def\pdfmark@[#1]#2{%

8360   \fi
8361   \fi
8362 \fi
8363 }

```

The complicated bit is working out the right enclosing rectangle of some piece of TeX text, needed by the /Rect key. This solution originates with Toby Thain (tobyt@netspace.net.au).

For the case breaklinks is enabled, I have added two hooks, the first one for package setouterhbox, it provides a hopefully better method without setting the text twice.

```
\usepackage [hyperref]{setouterhbox}
```

With the second hook, also you can set the text twice, e.g.:

```

\long\def\Hy@setouterhbox#1#2{\long\def\my@temp{#2}}
\def\Hy@breaklinksunhbox#1{\my@temp}

8364 \newsavebox{\pdf@box}
8365 \providecommand*{\Hy@setouterhbox}{\sbox}
8366 \providecommand*{\Hy@breaklinksunhbox}{\unhbox}
8367 \def\Hy@DEST{/DEST}
8368 \def\pdf@rect#1{%
8369   {dvipdf} \literalps@out{/ANN \pdf@type\space\the\pdf@toks\space <>}#1%
8370   \leavevmode
8371   \ifHy@breaklinks
8372     \Hy@setouterhbox\pdf@box{#1}%
8373   \else
8374     \sbox\pdf@box{#1}%
8375   \fi
8376   \dimen@\ht\pdf@box

```

```

8377 \ifdim\dp\pdf@box=\z@
8378   \literalps@out{H.S}%
8379 \else
8380   \lower\dp\pdf@box\hbox{\literalps@out{H.S}}%
8381 \fi

```

If the text has to be horizontal mode stuff then just unbox the saved box like this, which saves executing it twice, which can mess up counters etc (thanks DPC...).

```

8382 \ifHy@breaklinks
8383   \expandafter\Hy@breaklinksunhbox
8384 \else
8385   \expandafter\box
8386 \fi
8387 \pdf@box

```

but if it can have multiple paragraphs you'd need one of these, but in that case the measured box size would be wrong anyway.

```

\ifHy@breaklinks#1\else\box\pdf@box\fi
\ifHy@breaklinks{#1}\else\box\pdf@box\fi

8388 \ifdim\dimen@=\z@
8389   \literalps@out{H.R}%
8390 \else
8391   \raise\dimen@\hbox{\literalps@out{H.R}}%
8392 \fi

Unfortunately, some parts of the pdfmark PostScript code depend on vagaries of the dvi driver. We isolate here all the problems.

46.9 Rokicki's dvips

dvips thinks in 10ths of a big point, its coordinate space is resolution dependent, and its *y* axis starts at the top of the page. Other drivers can and will be different!

The work is done in SDict, because we add in some header definitions in a moment.

```
8699 /*dvips*/
8700 \input{pdfmark.def}%
8701 \ifx\@pdfproducer\relax
8702   \def\@pdfproducer{dvips + Distiller}%

8710 \def\Hy@BorderArrayPatch{BorderArrayPatch}

8711 \AtBeginShipoutFirst{%
8712   \headerps@out{%
```

Unless I am going mad, this *appears* to be the relationship between the default coordinate system (PDF), and dvips;

```
/DvipsToPDF { .01383701 div Resolution div } def
/PDFToDvips { .01383701 mul Resolution mul } def
```

the latter's coordinates are resolution dependent, but what that .01383701 is, who knows? well, almost everyone except me, I expect... And yes, Maarten Gelderman <mgelderman@econ.vu.nl> points out that its 1/72.27 (the number of points to an inch, big points to inch is 1/72). This also suggests that the code would be more understandable (and exact) if 0.013 div would be replaced by 72.27 mul, so here we go. If this isn't right, I'll revert it.

```
8713   /DvipsToPDF{72.27 mul Resolution div} def%
8714   /PDFToDvips{72.27 div Resolution mul} def%
8715   /BPToDvips{72 div Resolution mul}def%
```

The values inside the /Boder array are not taken literally, but interpreted by ghostscript using the resolution of the dvi driver. I don't know how other distiller programs behaves in this manner.

The calculation of upper left y is done without raising the point in \TeX , by simply adding on the current $\backslash\text{baselineskip}$ to the current y . This is usually too much, so we remove a notional 2 points.

We have to see what the current baselineskip is, and convert it to the dvips coordinate system.

Argument: baselineskip in pt. The x and y coordinates of the current point, minus the baselineskip

46.10 VTeX's vtexpdfmark driver

This part is derived from the dvips (many names reflect this).

The origin seems to be the same as TeX's origin, 1 in from the left and 1 in downwards from the top. The direction of the y axis is downwards, the opposite of the dvips case. Units seems to be pt or bp.

```

46.11 Textures

At the suggestion of Jacques Distler (distler@golem.ph.utexas.edu), try to derive a suitable driver for Textures. This was initially a copy of dvips, with some guesses about Textures behaviour. Ross Moore (ross@maths.mq.edu.au) has added modifications for better compatibility, and to support use of pdfmark.

Start by defining a macro that expands to the end-of-line character. This will be used to format the appearance of PostScript code, to enhance readability, and avoid excessively long lines which might otherwise become broken to bad places.

\Hy@ps@CR The macro \Hy@ps@CR contains the end-of-line character.

```

8841 <*textures>
8842 \begingroup
8843  \obeylines %
8844  \gdef\Hy@ps@CR{\noexpand
8845  }%
8846 \endgroup %

```

Textures has two types of \special command for inserting PostScript code directly into the dvi output. The ‘postscript’ way preserves TeX’s idea of where on the page the \special occurred, but it wraps the contents with a save–restore pair, and adjusts the user-space coordinate system for local drawing commands. The ‘rawpostscript’ way simply inserts code, without regard for the location on the page.

Thus, to put arbitrary PostScript coding at a fixed location requires using *both* \special constructions. It works by pushing the device-space coordinates onto the operand stack, where they can be used to transform back to the correct user-space coordinates for the whole page, within a ‘rawpostscript’ \special.

```

8847 \def\literalps@out#1{%
8848  \special{postscript 0 0 transform}%

```

```

8849 \special{rawpostscript itransform moveto\Hy@ps@CR #1}%
8850 }%
8851 %

```

The ‘prepostscript’ is a 3rd kind of `\special`, used for inserting definitions into the dictionaries, before page-building begins. These are to be available for use on all pages.

```

8852 \def\headerps@out#1{%
8853   \special{%
8854     prepostscript TeXdict begin\Hy@ps@CR
8855       #1\Hy@ps@CR
8856     end%
8857   }%
8858 }%
8859 %

```

To correctly support the `pdfmark` method, for embedding PDF definitions with `.ps` files in a non-intrusive way, an appropriate definition needs to be made *before* the file `pdfmark.def` is read. Other parameters are best set afterwards.

```

```

The values inside the /Boder array are not taken literally, but interpreted by ghostscript using the resolution of the dvi driver. I don't know how other distiller programs behaves in this manner.

```

48 Bookmarks in the PDF file

This was originally developed by Yannis Haralambous (it was the separate `repere.sty`); it needed the `repere` or `makebook.pl` post-processor to work properly. Now redundant, as it is done entirely in L^AT_EX macros.

To write out the current section title, and its rationalized number, we have to intercept the `\@sect` command, which is rather dangerous. But how else to see the information we need? We do the *same* for `\@ssect`, giving anchors to unnumbered sections. This allows things like bibliographies to get bookmarks when used with a manual `\addcontentsline`

```
10828 \def\phantomsection{%
10829   \Hy@GlobalStepCount\Hy@linkcounter

10831   \Hy@raisedlink{\hyper@anchorstart{\@currentHref}\hyper@anchorend}%
10832 }
10833 }/package}
```

48.1 Bookmarks

```
10834 }/*outlines}
```

This section was written by Heiko Oberdiek; the code replaces an earlier version by David Carlisle.

The first part of bookmark code is in section 6. Further documentation is available as paper and slides of the talk, that Heiko Oberdiek has given at the EuroTeX'99 meeting in Heidelberg. See `paper.pdf` and `slides.pdf` in the `doc` directory of `hyperref`.

Tobias Oetiker rightly points out that we need a way to force a bookmark entry. So we introduce \pdfbookmark, with two parameters, the title, and a symbolic name. By

default this is at level 1, but we can reset that with the optional first argument.

```

```

The macros for calculating structure of outlines are derived from those by Petr Olsak used in the texinfopdf macros.

The VTEX section was written originally by VTEX, but then amended by Denis Girou (denis.girou@idris.fr), then by Taco Hoekwater (taco.hoekwater@wkap.nl). The problem is that VTEX, with its close integration of the PDF backend, does look at the contents of bookmarks, escaping \ and the like.

```
10923 <*vtex>
10924 \newcount\@serial\@counter\@serial\@counter=1\relax
```

\hv@pdf@char Plain octal codes doesn't work with versions below 6.50. So for early versions hex numbers have to be used. It would be possible to program this instead of the large \ifcase, but I'm too lazy to sort that out now.

```
