

Produce External Links Instead of Internal Ones^{*}

Boris Veytsman[†]

2012/02/27, v1.0

Abstract

A package to change automatic internal links in a document into external ones in the form `http://issue.com/action/page=PAGENUMBER` as required by <http://issuu.com>.

1 Introduction

PDF visualizer ISSUU (<http://issuu.com>) is a popular service allowing to show PDF documents “one page a time”. Due to the way it is implemented, internal links in these documents are not allowed. Instead, they must be converted to external ones in the form <http://issuu.com/action/page?page=PAGENUMBER>.

This package patches `hyperref` to produce external links in the required form instead of internal links created by `\ref`, `\cite` and other commands.

Since the package redefines the internals of `hyperref`, you need to call it *after* `hyperref`.

The author is grateful to FAO UN which partially funded this work and to Matthieu Stigler, Adam Prakash & Filippo Gheri for suggesting and testing this package.

2 Usage

To use this package just add `\usepackage{issuulinks}` *after* calling `hyperref`. By default all links will be converted into the form required by ISSUU.

`\issuusetup`

The command `\issuusetup{\textit{setup commands}}` might be used to customize the behavior of the package. At present the only customizable command is `prefix`, that sets the part of the link before `PAGENUMBER` by default <http://issuu.com/action/page?page=>. You can change it, for example,

```
\issuusetup{prefix={http://www.issuu.com/action/page?page=}}
```

Otherwise the work of the package should be transparent for the user.

3 Implementation

3.1 Algorithm

The idea is following. Whenever `hyperref` creates an internal anchor $\{\langle name \rangle\}$, we write to the aux file the command `\newISSUUlink{\langle name \rangle}{\langle abspage \rangle}`, where $\{\langle abspage \rangle\}$ is the absolute page number (as different from the displayed page number). Then when `hyperref` creates an internal link to $\{\langle name \rangle\}$, we substitute this to a call to <http://issuu.com> with the corresponding page number.

3.2 Declarations

We start with declaration, who we are:

```
1 <style>\NeedsTeXFormat{LaTeX2e}
2 {*gobble}
3 \ProvidesFile{issuulinks.dtx}
4 />
5 <style>\ProvidesPackage{issuulinks}
6 [2012/02/27 v1.0 Links in ISSUU style]
7 {*gobble}
8 \documentclass{ltxdoc}
9 \usepackage{hypdoc}
10 \usepackage{url}
11 \CodelineIndex
12 \RecordChanges
13 \EnableCrossrefs
14 \begin{document}
15   \DocInput{issuulinks.dtx}
16 \end{document}
17 />
18 <*style>
```

3.3 Parameters

We use `keyval` to process options:

```
19 \RequirePackage{xkeyval}

\issuusetup The shorthand for setting options:
20 \def\issuusetup#1{\setkeys{ISL}{#1}}

\ISL@prefix The prefix macro:
21 \define@key{ISL}{prefix}{\def\ISL@prefix{#1}}
22 \issuusetup{prefix={http://issuu.com/action/page?page=}}
```

3.4 Working with Aux File

```
\newISSUULink The page numbers in \Hy@abspage start from zero, so we need to increment them:  
23 \def\newISSUULink#1#2{\tempcnta=#2\relax\advance\tempcnta by1\relax  
24 \expandafter\xdef\csname ISL@link#1\endcsname{\the\tempcnta}}  
Someone can use an aux file from the previous run, so we provide a safety valve:  
25 \AtBeginDocument{  
26 \if@filesw  
27 \immediate\write\mainaux{\string\providecommand\string\newISSUULink[2]{}%  
28 \fi}
```

3.5 Writing the Internal Link Information

```
\new@pdflink We patch \new@pdflink to write its argument into the aux file. Note that the counter \Hy@abspage stores the absolute page position in hyperref. We do not prevent writing the internal anchor in the catalog—probably a waste of time and bits, but somebody might rely on this for some other purpose1.  
29 \let\new@pdflink@ISLorig=\new@pdflink  
30 \def\new@pdflink#1{  
31 \bsphack  
32 \protected\write\mainaux{}%  
33 {\string\newISSUULink{#1}{\the\Hy@abspage}}%  
34 \esphack  
35 \new@pdflink@ISLorig{#1}}
```

3.6 Patching Internal Links

```
\Hy@StartlinkName The standard \Hy@StartlinkName is defined like this:
```

```
\def\Hy@StartlinkName#1#2{  
  \pdfstartlink attr{#1}goto name{#2}\relax  
}
```

Here we are patching it. Note that we can have bad links if we use ‘old’ aux file

```
36 \def\Hy@StartlinkName#1#2{  
37 \expandafter\ifx\csname ISL@link#2\endcsname\relax  
38 \PackageWarning{issuulinks}{The page number for an external link  
39 is not defined. Setting it to 1. You need to rerun LaTeX to  
40 get the page numbers right.}%  
41 \expandafter\def\csname ISL@link#2\endcsname{1}\fi  
42 \edef\Hy@pstringURI{\ISL@prefix\csname ISL@link#2\endcsname}%  
43 \pdfstartlink attr{#1}%  
44 user{  
45 /Subtype/Link%  
46 \ifHy@pdflatex /F 4\fi  
47 /A<<%
```

¹Actually I am too lazy to do otherwise...

```
48      /Type/Action%
49      /S/URI%
50      /URI(\Hy@pstringURI)%
51      \ifHy@href@ismap
52          /IsMap true%
53      \fi
54      \Hy@href@nextactionraw
55      >>%
56  }%
57  \relax
58 }

59 </style>
```
