

The L^AT_EX keyfloat Package

v2.04 — 2021/06/08

© 2016–2021 Brian Dunn
bd@BDTechConcepts.com

Provides a key/value interface for generating floats.

Abstract

The `keyfloat` package provides a key/value user interface for quickly creating figures with a single image each, figures with arbitrary contents, tables, subfloats, rows of floats, floats located [H]ere, floats in the [M]argin, and floats with text [W]rapped around them.

Key/value combinations may specify a caption and label, a width proportional to `\ linewidth`, a fixed width and/or height, rotation, scaling, a tight or loose frame, an `\arraystretch`, a continued float, additional supplemental text, and an artist/author's name with automatic index entry. When used with the `tocdata` package, the name also appears in the List of Figures.

FLOATS may be moved into or rearranged inside a multi-row environment or subfloats, and are typeset to fit within the given number of columns, continuing to additional rows as necessary. Nested sub-rows may be used to generate layouts such as two small figures placed vertically next to one larger figure.

As an example, a typical command to include a figure with a framed image of half `\ linewidth` could be:

```
\keyfig*[hbp]{f,lw=.5,c={A caption},l={fig:label}}{image}
```

`keyfloat` uses the `caption`, `subcaption`, `newfloat` or `float`, and `wrapfig` packages, and cannot be used with the `subfig`, `subfigure`, `subfloat`, `floatrow`, or `floatflt` packages.

1 Introduction

The `keyfloat` package simplifies the creation of L^AT_EX floats, while still allowing a large number of useful features.

1.1 A problem with floats

When including a figure with a graphics image into a document, the user typically enters something such as:

```
\begin{figure}
\centering
\includegraphics[width=3in]{filename}
\caption{A Figure}
\label{fig:somelabel}
\end{figure}
```

When doing that often enough, it makes sense to factor the common code:

```
\onefigure[3in]{filename}{A Figure}{fig:somelabel}
```

Expanding the capability of `\onefigure` via `xparse` can lead to the general case of:

```
\onefigure*[loc](width){filename}(add'l text)[shortcap]{caption}*[label]
```

Attempting to add additional features such as frames and continued floats hits the limit of nine parameters for a T_EX macro, requiring that new features use some kind of change-state macros instead. Attempting to support rows of floats or subfloats only makes things more complicated still.

A key/value system solves the problem of adding more features, does not require much additional typing, is a more self-documenting syntax, and allows a shared syntax with subfloats and groups of floats as well. Thus, the `keyfloat` package.

1.2 The `keyfloat` package

Using `keyfloat`, the previous example becomes:

```
\keyfig{w=3in,c=A figure,l=fig:somelabel}{filename}
```

The `\onefigure` general case becomes:

```
\keyfig*[loc]{w=width,t={add'l text},sc=shortcap,cstar=caption,
l=label}{filename}
```

1.3 Features

The macros and environments provided by `keyfloat` include:

`\keyfig`: A figure with an image.

`\keytab`: A table.

`\keyflt`: An arbitrary float type macro.

`\keyfigbox`: A figure with arbitrary contents.

`\keyparbox`: A “figure” without a caption, useful to place uncaptioned text inside a group,

`keyfigure`: A figure environment.

`keytable`: A table environment.

`keyfloat`: An arbitrary float type environment.

`keyfloats`: A group of rows and columns of floats.

`keysubfigs`: A figure containing a group of rows and columns of subfigures.

`keysubtabs`: A table containing a group of rows and columns of subtables.

`keysubfloats`: A float of arbitrary type containing a group of rows and columns of subfloats.

`keywrap`: Wraps a keyfloat around an environment of text. Usable inside a list.

`marginfigure`: A figure environment placed into the margin.¹

`margintable`: A table environment placed in the margin.

Additional features include:

- Rows and columns of floats may be generated by placing them inside a `keyfloats` environment.
- Subfloats may be generated by placing them inside a `keysubfigs` or `keysubtabs` environment.
- Dynamic layout: The number of columns is specified. Extra floats are placed onto additional rows as needed, with the final row adjusted to compensate for leftovers.

¹`marginfigure` and `margintable`: The environments provided by the `tufte-book` class are used if loaded, otherwise `keyfloat` provides its own versions.

- Floats may be placed [`H`]ere.
- Floats may be placed in the [`M`]argin.
- Floats may be placed with text [`W`]rapped around them.
- Floats may be starred to span two columns.
- Continued floats may be used to repeat the previous float number.
- A figure may contain an image, with additional sizing, rotation, and a frame.
- Tables may be stretched. (`\arraystretch`)
- Boxes of arbitrary contents may be assigned a width and framed.
- Floats may be moved into and out of the grouping environments as needed.
- An artist/author's name may be added to a figure and the index.
- If the `tocdata` package is loaded (use v0.12+), the name is also added to the LOF.
- Additional descriptive text may be added as well.
- Frames may be customized.

examples A large number of examples are provided, each showing L^AT_EX source and the resulting float.

index A customized index is included at the back of the documentation.

margin tags Blue margin tags are used to help quickly find information, and often indicate the destination of index entries.

 **warnings** Several warnings are noted in the text. Watch out for these special cases.

problems See the “troubleshooting” section of the index for help with specific problems which may occur.

2 Using the **keyfloat** package

2.1 Loading **keyfloat** and related packages

keyfloat is loaded with the usual command:

```
\usepackage{keyfloat}
```

Pkg tocdata If you wish to have artists' names appear in the list of figures, as provided by the **tocdata** package, load **tocdata**, optionally followed by either **tocloft** or **titletoc**, then **keyfloat**:

```
Pkg tocloft
Pkg titletoc
\usepackage{tocdata}
\usepackage{titletoc}% or titletoc, or neither
\usepackage{keyfloat}
```

Pkg float To use custom float types with the **float** package:

```
\usepackage{float}
\newfloat{diagram}{htb}{lod}
```

Pkg newfloat To use custom float types with the **newfloat** package:

```
\usepackage{newfloat}
\DeclareFloatingEnvironment[
  fileext={lod},
  listname={List of Diagrams},
  name={Diagram},
]{diagram}
```

Pkg caption For the **caption** package, to have table captions appear above the tables, and to use custom float types:

```
\usepackage[tableposition=top]{caption}
\captionsetup[diagram]{
  style=default, justification=centering,
  margin=0pt, parskip=0pt, skip=1ex,
  labelfont={small,bf}, textfont={small,bf}
}
```

Pkg cleveref To use custom float and subfloat types with **cleveref**:

```
\usepackage{cleveref}
\crefname{diagram}{diagram}{diagrams}
\crefname{subdiagram}{subdiagram}{subdiagrams}
```

2.2 Macros and environments

- \keyfig * [$\langle loc \rangle$] { $\langle keys/values \rangle$ } { $\langle image\ filename \rangle$ }
A macro to generate a figure with an image from a file.
- \keytab * [$\langle loc \rangle$] { $\langle keys/values \rangle$ } { $\langle tabular\ contents \rangle$ }
A macro to generate a table with tabular contents. Usually use the keytable environment instead.
- \keyflt * [$\langle loc \rangle$] { $\langle float\ type \rangle$ } { $\langle keys/values \rangle$ } { $\langle contents \rangle$ }
A macro to generate an arbitrary float type with its contents.
- \keyfigbox * [$\langle loc \rangle$] { $\langle keys/values \rangle$ } { $\langle box\ contents \rangle$ }
A macro to generate a figure with arbitrary paragraph contents. See example 2.
- \keyparbox * [$\langle loc \rangle$] { $\langle keys/values \rangle$ } { $\langle box\ contents \rangle$ }
A macro to generate a figure with arbitrary paragraph contents, but no number or caption. This is equal to a \keyfigbox with cstar={}. Mostly useful to add supplemental information inside a row of floats or subfloats. See example 14.
- Env keyfigure * [$\langle loc \rangle$] { $\langle keys/values \rangle$ }
An environment to generate a figure with arbitrary contents. Useful for multi-paragraph contents. See example 3.
- Env keytable * [$\langle loc \rangle$] { $\langle keys/values \rangle$ }
An environment to generate a table with arbitrary contents. Useful for larger tables. See example 5.
- Env keyfloat * [$\langle loc \rangle$] { $\langle float\ type \rangle$ } { $\langle keys/values \rangle$ }
An environment to generate an arbitrary float type with its contents. Useful for multi-paragraph contents.

The above macros and environments may be used by themselves, or inside the following keyfloats, keysubfigs, or keysubtabs environments.

- Env keyfloats * [$\langle loc \rangle$] { $\langle num\ columns \rangle$ }
A group of figures or tables typeset in rows. May be nested, [H], [W], or [M]. See example 15.
- Env keysubfigs * [$\langle loc \rangle$] { $\langle numcols \rangle$ } { $\langle keys \rangle$ }
A group of subfigures typeset in rows. May *not* be nested. May be [H], [W], or [M]. See example 16.

Env `keysubtabs` * [$\langle loc \rangle$] { $\langle numcols \rangle$ } { $\langle keys \rangle$ }

A group of subtables typeset in rows. May *not* be nested. May be [H], [W], or [M]. See example 17.

Env `keysubfloats` * [$\langle loc \rangle$] { $\langle float type \rangle$ } { $\langle numcols \rangle$ } { $\langle keys \rangle$ }

A group of subfloats typeset in rows. May *not* be nested. May be [H], [W], or [M].

Env `keywrap` { $\langle width of keyfloat \rangle$ } { $\langle keyfloat \rangle$ }

Displays a keyfloat next to an environment of text. Two minipages are used side-by-side, which allows its use inside a list item where [W] will not work, but extra empty vertical space will appear if the keyfloat and the text are of unequal vertical size. $\langle keyfloat \rangle$ may be any of `\keyfig`, `keyfigure`, `keyfloats`, `keysubfigs`, etc., each with its proper arguments. See example 27.

Env `marginfigure` [$\langle offset \rangle$]

A figure placed into the margin, with an optional vertical offset. `\keyfloat` uses the version provided by the `tufte-book` class if available, or provides its own version otherwise. See example 20.

Env `margintable` [$\langle offset \rangle$]

A table placed into the margin, with an optional vertical offset. `\keyfloat` uses the version provided by the `tufte-book` class if available, or provides its own version otherwise. See example 21.

Arg * The star option creates floats which span both columns in a two-column document.

Arg [H] The [H] location forces a figure to be “Here”, in the form of a minipage instead of a float. A caption, label, etc. may still be assigned.

Arg [M] The [M] location places the float into the margin. When the `tufte-book` class is used, its `marginfigure` and `margintable` environments are used, otherwise `keyfloat` provides and uses its own versions of the same environments. See examples 22 and 23.

Arg [W] The [W] location wraps text around the float. Use this just before the start of a paragraph with contents large enough to wrap around the float. Do not use this inside a list environment. Select placement with the `wp` key; see the `wrapfig` package documentation for more information. Use `w` or `lw` to set the width of the item / image contained inside the wrap area. By default the caption will also be contained in this width. To use a larger width for the overall container and caption, set `w` or `lw` for the size of the image, and also use `ww` or `wlw` for a larger size for the caption. Watch the log for warnings from `wrapfig`.

`wrapfig` warnings

Arg [loc] The star and [loc] options are ignored for floats inside a `keyfloats`, `keysubfigs`, or `keysubtabs` environment. Note that these container environments may have their own star and [loc] options.

2.3 Keys and values

Table 1 shows the key/value combinations which are allowed. In most cases these may be used in any order and any combination, except for the following:

subfloat keys The keys labeled "Sub" may be used for the `keysubfigs` and `keysubtabs` environments, which group a number of subfloats together under one master float. The master float has its own caption, label, and text, and each subfloat inside the group likewise has its own set of keys.

keyfloats keys `keyfloats` does not accept any keys at all.

The "artist" keys `ap`, `af`, `al`, and `as` are only used by figures.

The `stretch` key increases space between tabular elements.

The rest of the macros and environments accept all of the keys, as they each create an individual float or subfloat, and each may have its own assigned dimensions and frame.

**short/long
caption combinations** Table 2 shows the combinations of the caption-related keys `c`, `cstar`, and `sc`, and how they control the caption numbering and entries in the LOF/LOT.

wrapped float placement Table 3 shows the wrapped-float placement options for the `wp` key for floats placed [W].

Table 1: Keys and values — part I

Key	Sub ^a	Description	Example
c	•	An unstarred caption. If empty, creates a figure with a number but no caption.	c=A caption
cstar	•	A starred caption. Creates a float without a number. If empty, creates a figure with no number or caption.	cstar=No Num
sc	•	The short caption for the LOF/LOT, even if cstar.	sc=Short cap
cont	•	Continued float?	cont
l	•	The label. Enclose in braces if a comma is included. Ignored in unnumbered floats.	l=fig:A name
ap, aup	•	Artist/author's prefix, such as "Mr." ^b	ap=Mr.
af, auf	•	Artist/author's first name. ^b	af=First
al, aul	•	Artist/author's last name. ^b	al=Last
as, aus	•	Artist/author's suffix, such as ~III. ^b	al=~III
t	•	Additional text. May include paragraphs. Enclose in braces if a comma is included. May need \protect before macro calls. Fully-justified alignment.	t=Paragraphs
tc	•	Additional text, aligned to the center.	tc=Paragraphs
tl	•	Additional text, aligned to the left.	tl=Paragraphs
tr	•	Additional text, aligned to the right.	tr=Paragraphs

^a: All the keys in Part I may be used with the `keysubfigs`, `keysubtabs`, and `keysubfloats` environments.

^b: Artist / author keys: al is an artist's last name, aul is an author's last name, etc. Artists names are printed centered, authors are flush right. A fixed-width non-breakable space is placed between parts of names, except that the optional suffix is connected directly to the last name, allowing "as={, Title}", for example.

... continued

Table 1: Keys and values — part II

Key	Sub ^c	Description	Example
lw	—	Set the width to a fraction of \linewidth. Cancels w. If a non-image float, sets the width of the text box. For wrapped objects, may be used with wlw for a smaller item with a larger caption.	lw=.5
w	—	Set the actual width. Cancels lw. If a non-image float, sets the width of the text box. For wrapped objects, may be used with ww for a smaller item with a larger caption.	w=2in
h	—	Set the actual height, images only.	w=2in
s	—	Set the image scale, images only.	s=3
a	—	Set the rotation angle; counter-clockwise degrees.	r=90
f	—	Selects a loose frame with the current \fboxsep. Only rotated with \keyfig.	f
ft	—	Selects a tight frame with no \fboxsep. Useful for photographs, or diagrams which already have some margin built in.	ft
stretch	—	Sets \arraystretch inside the float.	stretch=1.5
mo	—	Sets the vertical offset for a margin float.	mo=-1.2ex
wn	—	Sets the number of lines for a wrapped float.	wn=2
wp	—	Sets the wrap placement for a wrapped float. The default is 0, which places the wrapped float at the outside edge of the text. See table 3.	wp=I
wo	—	Sets the wrap overhang for a wrapped float.	wo=8em
wlw	—	Sets the total width of the wrapped item to a fraction of \linewidth. May be more than the w or lw width.	wlw=.6
ww	—	Sets the total width of the wrapped item. May be more than the w or lw width.	ww=2in
va	—	Sets the vertical alignment of the outermost minipage container for the keyfloat. Defaults to 'c'.	va=t

^c: None of the keys in Part II are used in the `keysubfigs`, `keysubtabs`, and `keysubfloats` environments.

Table 2: Caption-related key combinations

Keys in Use			Type of	
c	cstar	sc	Caption ^a	LOF / LOT ^b
•	—	—	Numbered	Caption
•	—	•	Numbered	Short Caption
—	•	—	Unnumbered	None
—	•	•	Unnumbered	Short Caption
—	cstar={}	Ignored	None	None

^a: Caption: Shows whether the float will be numbered, unnumbered, or have no caption.

^b: LOF / LOT: Shows whether the regular or short caption will appear in the List of Figures or List of Tables, or if there will be no listing.

Table 3: Key wp: Wrapped float placement options

Key	Location
r R	to the right of the text body
l L	to the left of the text body
i I	to the inside margin
o O	to the outside margin

The un-capitalized key attempts to place the float “here”, and the capitalized key allows L^AT_EX to try to find the best location. The default is O.

2.4 Other settings

\KFLTtightframe {*contents*} Frames the contents without separation.

\KFLTlooseframe {*contents*} Frames the contents with separation.

These may be used to re-define how contents are framed. The default is a simple \fbox.

Len \KFLTtightframewidth Combined width of the frame and separation for each of tight and loose frames. These settings should be adjusted when changing the frame width and/or separation. The value should be equivalent to \fboxwidth plus \fboxsep.

Len \KFLTlooseframewidth The computed width of the image. Useful to enclose an mdframed environment to restrict its width. See example 29.

An image.

Figure 1: A \keyfig with an image

Some text. More text.

Another paragraph.

Figure 2: A \keyfigbox

2.5 Examples

2.5.1 Single floats

Example 1: Figure with an image from a file

Code:

```
\keyfig{c=A \cs{keyfig} with an image,l=fig:simple}{image}
```

Result:

Figure 1

natural size This float (fig. 1) is shown at its natural size because no width or height modifiers were specified. When used alone like this, a regular float is created.

Example 2: Figure with arbitrary contents

Code:

```
\keyfigbox{f,c={A \cs{keyfigbox}},l=fig:figbox}
  {Some text. More text. \par Another paragraph.}
```

Result:

Figure 2

default width The \keyfigbox creates a figure with a box of arbitrary contents, instead of an image from a file. Its default width is the full \ linewidth, unless w or lw keys are used.

Arbitrary contents may go here.

Including multiple paragraphs.

Figure 3: A `\keyfigure` environment

Table 4: A `\keytab` table

A	B
C	D

Example 3: Figure environment with arbitrary contents

Code:

```
\begin{keyfigure}{f,c={A \env{keyfigure} environment},
  l=fig:environment}
Arbitrary contents may go here.
```

Including multiple paragraphs.
`\end{keyfigure}`

Result:

Figure 3

The `keyfigure` environment is preferred over the `\keyfigbox` macro when multiple lines of contents are to be included.

Example 4: Table macro

Code:

```
\keytab{c=A \cs{keytab} table,l=tab:simpletable}{\testtable}
```

Result:

Table 4

Do not try to use tables which overflow the page.

For anything other than a simple table, use the `keytable` environment. See example 5.

large tables For large tables, use the `longtable` or `supertabular` packages.

Table 5: A keytable environment

Arbitrary contents may go here. ^a				
<hr/> <table><tr><td>A</td><td>B</td></tr><tr><td>C</td><td>D</td></tr></table> <hr/>	A	B	C	D
A	B			
C	D			
^a A footnote.				

Example 5: Table environment with arbitrary contents

Code:

```
\begin{keytable}{f,c={A \env{keytable} environment},  
l=tab:environment}  
Arbitrary contents may go here.\footnote{A footnote.}  
  
\testtable  
\end{keytable}
```

Result:

Table 5

The keytable environment is preferred over the \keytab macro since most tables are multi-line creations.

\keytab centers the table, but keytable does not. Add \centering if desired.

Additional text. Multiple paragraphs may be used. The entire text is enclosed in braces because a comma is included. Alignment may be set by using tags tc, tl, or tr instead of t

Figure 4: A figure with many options

Example 6: Figure with many options selected

Code:

```
\keyfig{  
    w=2in,ft,r=15,  
    c=A figure with many options,  
    sc=A figure with options,  
    t={Additional text. Multiple paragraphs may be used.  
        The entire text is enclosed in braces because a comma  
        is included. Alignment may be set by using  
        tags \optn{tc}, \optn{tl}, or \optn{tr}  
        instead of \optn{t}},  
    l=fig:options  
}{image}
```

Result:

Figure 4

Width is fixed at 2 in, a tight frame is specified (\fboxsep of 0 pt), a short caption appears in the List of Figures, and the additional text is using the default fully-justified alignment.

Since fig. 4 is a float, it may appear on the following page.

Figure 5: Half of \linewidth

Example 7: Using \linewidth

Code:

```
\keyfig{lw=.5,c=Half of \cs{linewidth},l=fig:linewidth}{image}
```

Result:

Figure 5

\linewidth Figure 5 is half of \linewidth in size. When the lw key is used inside a keyfloats or keysubfigs environment, the \linewidth will be proportional to the sub-box for each element. When used alone, such as here, the \linewidth is the full width of the text on this page.

lw and w are not used at the same time. If both lw and w are specified, the last one cancels any previous ones.

Example 8: Using frames

Code:

```
\begin{keyfloats}[hbp]{4}
\keyfig{f,c=Loosely-framed figure,l=fig:looseframe}{image}
\keyfig{ft,c=Tightly-framed figure,l=fig:tightframe}{image}
\keytab{f,c=Loosely-framed table,l=tab:looseframe}{\testtable}
\keytab{ft,c=Tightly-framed table,l=tab:tightframe}{\testtable}
\end{keyfloats}
```

Result:

Figures 6 and 7 and tables 6 and 7

Figure 6:
Loosely-framed
figure

Figure 7:
Tightly-framed
figure

Table 6:
Loosely-framed
table

A	B
C	D

Table 7:
Tightly-framed
table

A	B
C	D

The f key adds a loose frame with the current \fboxsep. This is desirable in most cases.

The tf key adds a tight frame with no separation. This is useful for framing a photograph, or a diagram which already has a margin.

Framing tables is seldom recommended. In the case of the tight frame, table 7, note that the external frame almost overwrites the table's natural horizontal rules.

custom frames Also see section 2.6.1 for customizing frames.

Table 8: Table, rotated

(Framed to show box width.)

Example 9: Using rotation with boxes*Code:*

```
\keytab{f,w=.8in,c={Table, rotated},
r=70,l=tab:rotated,
tc=(Framed to show box width.)}
{\testwidetable}
```

*Result:**Table 8***rotated whitespace****⚠ box width**

Unless a width is given, a box is the full `\ linewidth`. When rotated, this extra horizontal space is rotated into extra vertical space. To avoid this extra space, set a `w` or `lw` to be wide enough for the table or other contents, but not much wider. When this box is rotated, it will not take much more vertical space than necessary.

frame rotation

Unlike an image, the frame of a box does not rotate with its contents.

Example 10: Located [H]ere

Code:

```
\keytab[H]{c={A table [H]},l=tab:here}{\testtable}
\keyfig[H]{f,w=1in,c={A keyfig [H]},l=fig:here}{image}
```

Result:

Table 9, Figure 8

Table 9: A table [H]

A	B
C	D

An image.

Figure 8: A keyfig [H]

 **Out of sequence**

Table 9 and Figure 8 are to be placed “[H]ere”, and therefore may appear out-of-sequence with surrounding figures. Place a \clearpage before or after to re-sync, if necessary.

An image.
=====

Starred caption with a short caption.

Example 11: Unnumbered float

Code:

```
\keyfig[H]{f,cstar={A starred caption}}{image}
```

Result:

See fig. "A starred caption".

An image.
=====

A starred caption

A starred caption creates a float without a number, and without an entry in the List of Figures unless there is a non-empty short caption. (See the next example.)

 **No label** Labels cannot be used when there is no number for a float.

Example 12: Unnumbered float with a LOF entry

Code:

```
\keyfig{  
    f,cstar={Starred caption with a short caption.},  
    sc={Starred short caption}  
}{image}
```

Result:

See fig. "Starred caption with a short caption".

A starred caption with a non-empty short caption creates an unnumbered entry in the List of Figures.

Example 13: An unnumbered in-text image

Code:

```
\keyfig[H]{f,cstar={},  
          tc={Optional text which is not a caption.}  
          }{image2}
```

Result:

See fig. "Optional text which is not a caption."

Optional text which is not a caption.

By using [H] and cstar={}, the image is placed inline without a number or LOF entry.

Also see example 14.

An image.

Some contents.

A \keyparbox with no number or label.

Figure 9: Next to a \keyparbox

Example 14: A box without a caption.

Code:

```
\begin{keyfloats}{2}
\keyparbox{
  f, lwd=.5,
  tc={A \cs{keyparbox} with no number or label.}
}{Some contents.}
\keyfig{c=Next to a \cs{keyparbox}, l=fig:nexttoparbox}{image}
\end{keyfloats}
\keyparbox[H]{f, lwd=.5}{A \cs{keyparbox} [H], outside the row.}
```

Result:

Figure 9, and the box to its left.

A \keyparbox [H], outside the row.

A \keyparbox is a \keyfigbox with cstar={}, and is mostly useful as an information box inside a row or a set of subfloats.

2.5.2 Groups of floats

Example 15: Groups of figures — keyfloats environment

Code:

```
\begin{keyfloats}{2}
\keyfig{lw=1,f,c={First in a group},
         l=fig:firstinrow,tl={\cs{raggedright} text}
         }{image}
\keyparbox{}{\centering A \cs{keyparbox} describing something.
              \par With several paragraphs.}
\begin{keyfloats}{2}
\keyfig{lw=1,c={Third in a group},
         l=fig:thirdinarow}{image}
\keyfig{lw=1,c={Fourth in a group}}{image2}
\keyfig{lw=1,c={Fifth in a group}}{image}
\keyfig{lw=1,c={Sixth in a group},
         l=fig:sixthinarow}{image2}
\end{keyfloats}
\keytab{c={Seventh in a group},l=tab:seventhinrow}{\testwidetable}
\end{keyfloats}
```

Result:

Figure 10 to Table 10

Figure 10 to table 10 are in a keyfloats environment. Furthermore, Figures 11 to 14 are in an additional nested keyfloats environment, forming a small box of floats inside the larger group.

The keyfloats environment takes an argument for the number of columns. Additional floats are automatically placed on following rows. Changing the number of columns will cause the floats to automatically readjust as necessary. Leftovers will be centered on the last row.

 **\linewidth** Note that \linewidth is adjusted for each row and nested row, so the lw key will need to be changed if a float is moved to a different nesting level.

 **image too large** Fixed-width or fixed-height floats may be too large to fit if they are moved into a group. It is the user's responsibility to adjust w, h, or lw as necessary.

Keyfloats may be located [H], [M], or located [W] set with half the line width:

```
\begin{keyfloats}[H]{2} ...
```

Keyfloats may be starred to span both columns in a two-column format:

```
\begin{keyfloats}*{2} ...
```

\raggedright text

**Figure 15: Subfigures**

2.5.3 Subfloats

Example 16: Subfigures — `keysubfigs` environment

Code:

```
\begin{keysubfigs}{3}{c=Subfigures,l=fig:subfigs}
\keyfig{lw=1,f,c={First subfigure},
l=fig:firstsubfig,t=Some text}{image}
\keyfig{lw=1,f,r=90,c={Second subfigure},
l=fig:secondsubfig,
t=Lots of lots of lots of lots of text.}
{image2}
\begin{keyfloats}{1}
\keyfig{lw=1,f,c={Third subfigure},l=fig:thirdsubfig}{image}
\keytab[c={Fourth subfigure},l=fig:fourthsubfig]{\testtable}
\keyfig{lw=.5,f,c={Fifth subfigure},l=fig:fifthsubfig}{image}
\end{keyfloats}
\end{keysubfigs}
```

Result:

Figure 15

Figures 15a to 15e are in the fig. 15 `keysubfigs` environment. The `keysubtabs` environment is similar. Mixed types have the type of their container, as shown with fig. 15d.

Subfloats are associated floats (a, b, ...) collected together into one common float (the enclosing `keysubfigs` or `keysubtabs` environment). The enclosing float can have its own caption (call “Sub-Figures” in the example), which appears in the LOF/LOT, and also a label. Each subfloat can have its own caption and label as well, but the subcaption does not appear in the LOF/LOT.

- ⚠ **mixed subfloats** All subfloats are forced to have the same type as its containing float. A table inside a figure will be labeled as a figure, for example. This avoids miss-labeling as each subfloat must clearly be identified as a child of its containing float.
- ⚠ **nested subfloats** `keysubfigs` and `keysubtabs` may not be used inside the `keyfloats` environment, and cannot be nested inside each other. (No subfloat 12aa, 12ab, 12ba, etc.)
- nested keyfloats** The `keyfloats` environment may be used inside `keysubfigs` or `keysubtabs` to gather subfloats together, such as the three right-most figures in fig. 15.

Subfloats may be located [H], [M], or located [W] set with half the line width:

```
\begin{keysubfigs}[H]{3}{key/vals ...}
```

Subfloats may be starred to span both columns in a two-column format:

```
\begin{keysubfigs}*{2}{key/vals ...}
```

Example 17: Subtables [H] — `keysubtabs` environment

Code:

```
\begin{keysubtabs}[H]{2}{c=Subtables [H],l=tab:subtabs}
\keytab{c={First subtable},l=fig:firstsubtab}{\testtable}
\keytab{c={Second subtable},l=fig:secondsubtab}{\testwidetable}
\end{keysubtabs}
```

Result:

D	E	F

An image.

Figure 16: Figure to be continued

Figure 16: ...continued

2.5.4 Continued floats

The `cont` key may be used to generate a “continued” float. The continued float receives the same number as the previous float, and it is assumed that they are the same float, except that they are separated for some reason such as size on the page.

The label may be placed in a continued float, and will still receive the same float number as the prior non-continued float.

Example 18: Continued figure

Code:

```
\begin{keyfloats}{2}
\keyfig[,c=Figure to be continued]{image}
\keyfig[c={\dots continued},cont,l=fig:firstcontinued]{image2}
\end{keyfloats}
```

Result:

Figure 16

An image.

a: First of a set

An image.

b: Second of a set

Figure 17: A set of figures

Another image

c: Third of a set

Another image

d: Fourth of a set

Figure 17: ...continued

2.5.5 Continued subfloats

The `keysubfigs` and `keysuptabs` environments may also be given the `cont` key. The containing environment's float receives the same number as the previous float (presumably another subfloat container).

Example 19: Continued subfloats

Code:

```
\begin{keysubfigs}{2}{c={A set of figures},l=fig:continuedfigures}
\keyfig{c={First of a set},l=fig:contfirst}{image}
\keyfig{c={Second of a set},l=fig:contsecond}{image}
\end{keysubfigs}
\begin{keysubfigs}{2}{c={\dots continued},cont}
\keyfig{c={Third of a set},l=fig:contthird}{image2}
\keyfig{c={Fourth of a set},l=fig:contfourth}{image2}
\end{keysubfigs}
```

Result:

Figure 17

2.5.6 Margin floats

When a keyfloat is located [M], it will be placed in the margin.

- cls tufte-book When the tufte-book class is used, its `marginfigure` or `margintable` environments will be used, otherwise `keyfloat` provides environments of the same name and uses those instead.

Example 20: The `marginfigure` environment

Code:

```
\begin{marginfigure}
\centering
\includegraphics[width=.75\linewidth]{image}
```

Some text added by hand.

Figure 18: A `marginfigure`

Figure 26: Custom-framed image

A loosely-framed box.

Figure 27: Custom loosely-framed box

2.5.8 Custom frames

Example 29: Custom frames with mdframed

Code:

```
\renewcommand{\KFLTtightframe}[1]{%
\begin{minipage}{\KFLTimageboxwidth}
\begin{mdtightframe}%
#1
\end{mdtightframe}%
\end{minipage}%
}
\setlength{\KFLTtightframewidth}{1pt}

\renewcommand{\KFLTlooseframe}[1]{%
\begin{mdlooseframe}[leftmargin=1.5in,rightmargin=1.5in]%
#1
\end{mdlooseframe}%
}
\setlength{\KFLTlooseframewidth}{4pt}

\keyfig{ft,c=Custom-framed image,l=fig:customframe,r=90}{image}
\keyfigbox{f,c=Custom loosely-framed box,
l=fig:customlooseframe}{A loosely-framed box.}
```

Result:

Figures 26 and 27

Pkg **mdframed**
⚠ **mdframed width**

Example 29 shows custom frames created with the `mdframed` package along with `tikz`. Note that `mdframed` uses the full `\linewidth` even if the left/right margins are explicitly set, which causes extra vertical space when rotated. Because of this, the framed object is enclosed inside a `minipage` whose width is precomputed based on the object itself, then set in `\KFLTimageboxwidth`. Any shadow may fall outside this

Figure 28: Custom shadow

Figure 29: Custom loosely-framed shadow

box.

See section [2.6.1](#) for more details.

Example 30: Custom shadows with `fancybox`

Code:

```
\renewcommand{\KFLTtightframe}[1]{%
\setlength{\fboxrule}{.4pt}
\setlength{\fboxsep}{0pt}
\setlength{\shadowsize}{2pt}
\shadowbox{#1}%
}
\setlength{\KFLTtightframewidth}{0.4pt}

\renewcommand{\KFLTlooseframe}[1]{%
\setlength{\fboxrule}{.4pt}
\setlength{\fboxsep}{3pt}
\setlength{\shadowsize}{2pt}
\shadowbox{#1}%
}
\setlength{\KFLTlooseframewidth}{3.4pt}

\keyfig{ft,c=Custom shadow,l=fig:customshadow}{image}
\keyfigbox{f,c=Custom loosely-framed shadow,lw=.5,
l=fig:customlooseshadow}{A loosely-framed shadow box.}
```

Result:

[Figures 28 and 29](#)

Pkg fancybox Example 30 shows custom shadow frames created with the `fancybox` package. This combination respects `lw` and `w`.

See section [2.6.1](#) for more details.

MR. FIRST LAST III

About the illustration.

Figure 30: Artist's name — image

Some text, a quotation, a TikZ diagram — anything not an image file.

MR. LAST

Figure 31: Artist's name — arbitrary contents

2.5.9 Artist's name

Example 31: Artist's name — image

Code:

```
\keyfig{ft,ap=Mr.,af=First,al=Last,as={~III},
tc={\textit{About the illustration.}},
c=Artist's name --- image,l=fig:artist}{image}
```

Result:

Figure 30

Example 32: Artist's name — arbitrary contents

Code:

```
\tdartistright
\begin{keyfigure}{f,ap=Mr.,al=Last,
c=Artist's name --- arbitrary contents,l=fig:artistpar}
\centering Some text, a quotation, a TikZ\ diagram ---
anything not an image file.
\end{keyfigure}
\tdartistcenter
```

Result:

Figure 31

The artist's name and optional prefix/suffix are printed below the figure, and an index entry is made for the name in (Last, First) format, or (Last) if there is no first name. If the `tocdata` package is loaded, the artist's name is also added to the List of Figures, and the `tocdata \tdname...` macros may be used to align the name.

PREFIX FIRST LAST, SUFFIX

Some fully-justified text just for illustrative purposes, in case you have use for long explanations. This text may be the full \linewidth in size.

Multiple paragraphs of text are allowed.

Figure 32: Artist's collection

Example 33: Subfloats with an artist

Code:

```
\begin{keysubfigs}{2}%
  c=Artist's collection, l=fig:artistcollection,
  t={Some fully-justified text just for illustrative purposes,
  in case you have use for long explanations.
  This text may be the full \cs{linewidth} in size. \par
  Multiple paragraphs of text are allowed.},
  ap=Prefix,af=First,al=Last,as={, Suffix}
}
\keyfig{c=Artist's First Work}{image}
\keyfig{c=Artist's Second Work,
        tc={Commentary about the work.}}{image2}
\end{keysubfigs}
```

Result:

Figure 32

A group of figures may be placed into a subfloat container, which may have its own artist keys and additional text. Furthermore, each subfloat inside the collection may also have its own artist tags and additional text.

2.6 Customization

2.6.1 Custom frames

There are two user-redefinable framing macros:

`\KFLTtightframe` and `\KFLTlooseframe`

A float's contents are placed into a box, which is passed to either of these two macros depending on the key `f` or `tf`.

Each macro takes one argument and frames it.

Each macro has a associated L^AT_EX lengths:

`\KFLTtightframewidth` and `\KFLTlooseframewidth`

These lengths must be redefined to the expected total frame width, equal to the frame thickness plus separation.

The default definitions are:

```
\newcommand{\KFLTtightframe}[1]{%
  \setlength{\fboxsep}{0pt}%
  \setlength{\fboxrule}{.4pt}%
  \fbox{#1}%
}
\setlength{\KFLTtightframewidth}{.4pt}

\newcommand{\KFLTlooseframe}[1]{%
  \setlength{\fboxsep}{3pt}%
  \setlength{\fboxrule}{.4pt}%
  \fbox{#1}%
}
\setlength{\KFLTlooseframewidth}{3.4pt}
```

See example 29 for an example created with the `mdframed` package, and example 30 for an example created with the `fancybox` package.

2.6.2 Distance between floats and rows

rows too close/far To spread out the distance between floats and/or rows of floats on a busy page, the following settings may be changed. The settings used in this documentation are:

```
\setlength{\floatsep}{5ex plus 1ex minus 1ex}
\setlength{\dblfloatsep}{5ex plus 1ex minus 1ex}
```

2.6.3 Formatting the captions

To modify the typesetting of the captions, see the `caption` package. The settings used in this documentation are:

```
% default applied to margin floats:  
\captionsetup{labelfont={small,bf},textfont={small,bf}}  
  
\captionsetup[figure]{  
    style=default, justification=centering,  
    margin=0pt, parskip=0pt, skip=2ex,  
    labelfont={small,bf},textfont={small,bf}  
}  
  
\captionsetup[table]{  
    style=default, justification=centering,  
    margin=0pt, parskip=0pt, skip=1ex,  
    labelfont={small,bf},textfont={small,bf}  
}  
  
\captionsetup[subfigure]{  
    style=default, justification=centering,  
    margin=0pt, parskip=0pt, skip=2ex,  
    labelfont={small},textfont={small}  
}  
  
\captionsetup[subtable]{  
    style=default, justification=centering,  
    margin=0pt, parskip=0pt, skip=1ex,  
    labelfont={small},textfont={small}  
}
```

3 Code

3.1 Older packages

Ensure that `tocdata`, if loaded, is new enough:

```

1 \@ifpackageloaded{tocdata}{
2     \@ifpackagelater{tocdata}{2019/03/21}{}{
3         \PackageError{keyfloat}
4         {%
5             The tocdata package is out of date.\MessageBreak
6             Update to tocdata v2.02 2019/03/21 or later.\MessageBreak
7             to use use this version of keyfloat%
8         }
9         {%
10            Please update the tocdata package. It's worth it!%
11        }
12    }
13 }{}
```

3.2 Prohibited packages

Prohibits the use of a certain other packages.

```

\KFLT@@prohibitpackage {\langle packagename\rangle}

14 \newcommand*{\KFLT@@prohibitpackage}[2]{%
15 \@ifpackageloaded{\#1}
16 {
17     \PackageError{keyfloat}
18     {%
19         The keyfloat package conflicts with the #1\MessageBreak
20         package. Remove #1 to use keyfloat.\MessageBreak
21         Alternative(s):\MessageBreak
22         \space\space\#2%
23     }
24     {%
25         Keyfloat uses the caption, subcaption, newfloat, and wrapfig packages.%
26     }
27 }{%
28 }
```

```
\KFLT@prohibitpackage {\langle packagename\rangle}
```

Prohibits the use of another package, both now and also \AtBeginDocument.

```
29 \newcommand*{\KFLT@prohibitpackage}[2]{  
30     \KFLT@prohibitpackage{#1}{#2}  
31     \AtBeginDocument{\KFLT@prohibitpackage{#1}{#2}}  
32 }
```

The list of prohibited packages:

```
33 \KFLT@prohibitpackage{floatrow}{caption and subcaption}  
34 \KFLT@prohibitpackage{subfig}{subcaption}  
35 \KFLT@prohibitpackage{subfigure}{subcaption}  
36 \KFLT@prohibitpackage{subfloat}{subcaption}  
37 \KFLT@prohibitpackage{floatflt}{wrapfig}
```

3.3 Required packages

Pkg etoolbox v2.6 or later for \BeforeBeginEnvironment, \AfterEndEnvironment

```
38 \RequirePackage{etoolbox}[2011/01/03]%
```

Pkg xparse Argument processing:

```
39 \RequirePackage{xparse}
```

Pkg keyval Key processing:

```
40 \RequirePackage{xkeyval}
```

Pkg graphicx For \includegraphics and rotating:

```
41 \RequirePackage{graphicx}
```

Pkg caption Handles all caption-related functions:

```
42 \RequirePackage{caption}[2010/10/31]% v3.2 to support \phantomcaption
```

Pkg subcaption Derived from caption, used to handle subfloats:

```
43 \RequirePackage{subcaption}
```

Pkg calc Used to compute box width minus frame sep and width.

```
44 \RequirePackage{calc}
```

Pkg `rotating` Provides rotation via the `turn` environment:

```
45 \RequirePackage{rotating}
```

Pkg `placeins` Provides

to process existing floats before adding new ones.

```
46 \RequirePackage{placeins}
```

Pkg `wrapfig` Provides figure wrapping code.

```
47 \RequirePackage{wrapfig}
```

3.4 Patching `wrapfig`

A minor patch to allow `wrapfig` to expand its argument for the number of narrow lines. This allows it to be programmed by `keyfloat`.

`\WF@wr` will not be defined if using `\warp` with HTML output.

```
48 \RequirePackage{xpatch}
49
50 \ifdef{\WF@wr}
51 {
52     \xpatchcmd{\WF@wr}
53         {\gdef}
54         {\xdef}
55         {}
56         {
57             \PackageError{keyfloat}
58             {Unable to patch wrapfig \protect\WF@wr}
59             {Please inform the keyfloat author.}
60         }
61 }
62 {}
```

Pkg `gettitlestring` Used by `hyperref` and `nameref`.

Expand names used in titles:

```
63 \PassOptionsToPackage{expand}{gettitlestring}
```

Rows of floats are created by a simple `minipage` environment, instead of relying on a preexisting package. This proved to be advantageous when support was added for multiple rows in one environment.

3.5 In-line figures and tables

These macros are commonly used by others.

Env `tablehere` Place a table exactly [H].

```

64 \ProvideDocumentEnvironment{tablehere}{}%
65 {%
66   \vskip\intextsep\noindent%
67   \minipage{\linewidth}%
68   \def\@captype{table}%
69   \normalcolor\reset@font\normalsize%
70 }%
71 {\endminipage\vskip\intextsep}%

```

Env `figurehere` Place a figure exactly [H].

```

72 \ProvideDocumentEnvironment{figurehere}{}%
73 {%
74   \vskip\intextsep\noindent%
75   \minipage{\linewidth}%
76   \def\@captype{figure}%
77   \normalcolor\reset@font\normalsize%
78 }%
79 {\endminipage\vskip\intextsep}%

```

3.6 Row counting and control

Used to count position and wrap at end of each row.

Ctr `KFLT@numcols` Columns per row.

```
80 \newcounter{KFLT@numcols}
```

Ctr `KFLT@thiscol` Column currently processing. 0 if not yet in a keyfloats or subfloat.

```
81 \newcounter{KFLT@thiscol}
```

Len `\KFLT@rowboxwidth` How wide is each box in the row.

```
82 \newlength{\KFLT@rowboxwidth}
```

3.7 Float key handling

Bool KFLT@cont Continued float?

83 \newboolean{KFLT@cont}

Key [main] cont Continued float?

84 \define@key{KFLT@keys}{cont}[true]{\setboolean{KFLT@cont}{#1}}

\KFLT@c Caption storage

85 \newcommand{\KFLT@c}{}{}

Bool KFLT@cstar Starred caption?

86 \newboolean{KFLT@cstar}

Key [main] c Caption

87 \define@key{KFLT@keys}{c}{%
88 \renewcommand{\KFLT@c}{#1}\setboolean{KFLT@cstar}{false}}%
89 }

Key [main] cstar Caption starred?

90 \define@key{KFLT@keys}{cstar}{%
91 \renewcommand{\KFLT@c}{#1}\setboolean{KFLT@cstar}{true}}%
92 }

Key [main] sc Short caption

93 \define@key{KFLT@keys}{sc}{%
94 \renewcommand{\KFLT@sc}{#1}}%
95 \setboolean{KFLT@scgiven}{true}}%
96 }

\KFLT@sc Short caption storage

97 \newcommand{\KFLT@sc}{}{}

Bool KFLT@scgiven Was a short caption given?

98 \newboolean{KFLT@scgiven}

```
\KFLT@type  Float type: "figure", "table"
99 \newcommand*{\KFLT@type}{}  
  
Key [main]  1  Label
100 \define@key{KFLT@keys}{1}{\renewcommand{\KFLT@1}{#1}}  
  
\KFLT@1  Label storage
101 \newcommand*{\KFLT@1}{}  
  
For the artist/author keys:
Key [main]  ap  Artist prefix
102 \define@key{KFLT@keys}{ap}{\renewcommand{\KFLT@ap}{#1}}  
  
\KFLT@ap  Storage for artist prefix
103 \newcommand*{\KFLT@ap}{}  
  
Key [main]  af  Artist first name
104 \define@key{KFLT@keys}{af}{\renewcommand{\KFLT@af}{#1}}  
  
\KFLT@af  Storage for artist first name
105 \newcommand*{\KFLT@af}{}  
  
Key [main]  al  Artist last name
106 \define@key{KFLT@keys}{al}{\renewcommand{\KFLT@al}{#1}}  
  
\KFLT@al  Storage for artist last name
107 \newcommand*{\KFLT@al}{}  
  
Key [main]  as  Artist suffix
108 \define@key{KFLT@keys}{as}{\renewcommand{\KFLT@as}{#1}}
```

\KFLT@as Storage for artist suffix

109 \newcommand*\{\KFLT@as\}{}

Key [main] aup Author prefix

110 \define@key{KFLT@keys}{aup}{\renewcommand{\KFLT@aup}{#1}}

\KFLT@aup Storage for author prefix

111 \newcommand*\{\KFLT@aup\}{}

Key [main] auf Author first name

112 \define@key{KFLT@keys}{auf}{\renewcommand{\KFLT@auf}{#1}}

\KFLT@auf Storage for author first name

113 \newcommand*\{\KFLT@auf\}{}

Key [main] aul Author last name

114 \define@key{KFLT@keys}{aul}{\renewcommand{\KFLT@aul}{#1}}

\KFLT@al Storage for author last name

115 \newcommand*\{\KFLT@aul\}{}

Key [main] aus Author suffix

116 \define@key{KFLT@keys}{aus}{\renewcommand{\KFLT@aus}{#1}}

\KFLT@aus Storage for author suffix

117 \newcommand*\{\KFLT@aus\}{}

\KFLT@textalign Storage for text alignment.

Used for the additional text in the float.

118 \newcommand*\{\KFLT@textalign\}{}

\KFLT@t Additional text storage

Used for the additional text in the float.

```
119 \newcommand{\KFLT@t}{}%
```

Create replacement macros in case `tocdata` is not loaded:

```
120 \providecommand{\tdartisttextjustify}{}%
121 \providecommand{\tdartisttextcenter}{}%
122 \providecommand{\tdartisttextleft}{}%
123 \providecommand{\tdartisttextright}{}%
124 \providecommand{\tdauthortextjustify}{}%
125 \providecommand{\tdauthortextcenter}{}%
126 \providecommand{\tdauthortextleft}{}%
127 \providecommand{\tdauthortextright}{}%
128 \providecommand{\tdartistjustify}{}%
129 \providecommand{\tdartistcenter}{}%
130 \providecommand{\tdartistleft}{}%
131 \providecommand{\tdartistright}{}%
132 \providecommand{\tdauthorjustify}{}%
133 \providecommand{\tdauthorcenter}{}%
134 \providecommand{\tdauthorleft}{}%
135 \providecommand{\tdauthorright}{}%
```

Key [main] t Additional text, justified alignment.

```
136 \define@key{KFLT@keys}{t}{%
137   \renewcommand{\KFLT@t}{\#1}%
138   \renewcommand{\KFLT@textalign}{\centering}%
139 }
```

Key [main] tc Additional text, centered alignment.

```
140 \define@key{KFLT@keys}{tc}{%
141   \renewcommand{\KFLT@t}{\#1}%
142   \renewcommand{\KFLT@textalign}{\centering}%
143 }
```

Key [main] tr Additional text, aligned to the right.

```
144 \define@key{KFLT@keys}{tr}{%
145   \renewcommand{\KFLT@t}{\#1}%
146   \renewcommand{\KFLT@textalign}{\raggedleft}%
147 }
```

Key [main] tl Additional text, aligned to the left.

```
148 \define@key{KFLT@keys}{t1}{%
149     \renewcommand{\KFLT@t}{#1}%
150     \renewcommand{\KFLT@textalign}{\raggedright}%
151 }
```

Key [main] **lw** Fraction of \linewidth

```
152 \define@key{KFLT@keys}{lw}{%
153     \renewcommand{\KFLT@lw}{#1}%
154     \setlength{\KFLT@w}{0pt}%
155 }
```

\KFLT@lw Fraction of linewidth storage: ".5"

```
156 \newcommand*\KFLT@lw{}
```

Key [main] **w** Fixed width

```
157 \define@key{KFLT@keys}{w}{%
158     \setlength{\KFLT@w}{#1}%
159     \renewcommand{\KFLT@lw}{}}%
160 }
```

\KFLT@w Width storage: "3cm"

```
161 \newlength{\KFLT@w}
```

Key [main] **h** Fixed height

```
162 \define@key{KFLT@keys}{h}{\setlength{\KFLT@h}{#1}}
```

\KFLT@h Height storage: "2in"

```
163 \newlength{\KFLT@h}
```

Key [main] **s** Scale

```
164 \define@key{KFLT@keys}{s}{\renewcommand{\KFLT@s}{#1}}
```

\KFLT@s Scale storage: "3"

```
165 \newcommand*\KFLT@s{1}
```

Key [main] r Angle. 90 is counter-clockwise 90 degrees.

```
166 \define@key{KFLT@keys}{r}{\renewcommand{\KFLT@r}{#1}}
```

\KFLT@r Angle storage: "90"

```
167 \newcommand*{\KFLT@r}{0}
```

Key [main] f Frame the image with \KFLTlooseframe.

```
168 \define@key{KFLT@keys}{f}[true]{\setboolean{KFLT@f}{#1}}
```

Bool KFLT@f Frame the image?

```
169 \newboolean{KFLT@f}
```

Key [main] ft Tightly frame the image using \KFLTtightframe. This is useful for photographs, or diagrams which already have built-in margins.

```
170 \define@key{KFLT@keys}{ft}[true]{\setboolean{KFLT@ft}{#1}}
```

Bool KFLT@ft Tightly frame the image?

```
171 \newboolean{KFLT@ft}
```

Key [main] stretch Set \arraystretch inside the table environment.

```
172 \define@key{KFLT@keys}{stretch}{\renewcommand{\KFLT@stretch}{#1}}
```

\KFLT@stretch Storage for \arraystretch.

```
173 \newcommand*{\KFLT@stretch}{1}
```

Key [main] mo Set vertical offset for a margin float.

```
174 \define@key{KFLT@keys}{mo}{\setlength{\KFLT@mo}{#1}}
```

\KFLT@mo Storage for the vertical margin offset.

```
175 \newlength{\KFLT@mo}
```

Key [main] wn Set wrap number of narrow lines for a wrapped float.

```
176 \define@key{KFLT@keys}{wn}{\renewcommand{\KFLT@wn}{#1}}
```

\KFLT@wn Storage for the wrap placement.

```
177 \newcommand{\KFLT@wn}{}
```

Key [main] wp Set wrap placement for a wrapped float.

See table 3 on page 15.

```
178 \define@key{KFLT@keys}{wp}{\renewcommand{\KFLT@wp}{#1}}
```

\KFLT@wp Storage for the wrap placement.

```
179 \newcommand{\KFLT@wp}{0}
```

Key [main] wo Set wrap overhang for a wrapped float.

```
180 \define@key{KFLT@keys}{wo}{\renewcommand{\KFLT@wo}{#1}}
```

\KFLT@wo Storage for the wrap placement.

```
181 \newcommand{\KFLT@wo}{\wrapoverhang}
```

Key [main] wlw Wrapped figure, fraction of \linewidth

```
182 \define@key{KFLT@keys}{wlw}{%
183   \renewcommand{\KFLT@wlw}{#1}%
184   \setlength{\KFLT@ww}{0pt}%
185 }
```

\KFLT@wlw Wrapped figure, fraction of linewidth storage: “.5”

```
186 \newcommand*\KFLT@wlw{}
```

Key [main] ww Wrapped figure, fixed width

```
187 \define@key{KFLT@keys}{ww}{%
188   \setlength{\KFLT@ww}{#1}%
189   \renewcommand{\KFLT@wlw}{}}%
190 }
```

\KFLT@ww Wrapped figure, width storage: “3cm”

```
191 \newlength{\KFLT@ww}
```

Key [main] va Set vertical alignment of the outermost minipage container.

```
192 \define@key{KFLT@keys}{va}{\renewcommand{\KFLT@va}{#1}}
```

\KFLT@va Storage for the vertical alignment.

```
193 \newcommand{\KFLT@va}{c}
```

3.8 Nesting control

Ctr KFLT@keyfloatdepth Depth inside a keyfigs environment

```
194 \newcounter{KFLT@keyfloatdepth}
195 \setcounter{KFLT@keyfloatdepth}{0}
```

Bool KFLT@inkeysubfloats Inside a keysubfigs environment?

```
196 \newboolean{KFLT@inkeysubfloats}
197 \setboolean{KFLT@inkeysubfloats}{false}
```

3.9 Subfloat key handling

These keys are for the container holding a collection of subfigures.

Bool KFLT@subgrpcont Continued float?

```
198 \newboolean{KFLT@subgrpcont}{}  
199 \define@key{KFLT@subgrpkeys}{cont}[true]{%
```

Key [subfloat container] cont Continued float

```
200     \setboolean{KFLT@subgrpcont}{#1}%
201 }
```

\KFLT@subgrpc Sub-caption storage

```
202 \newcommand{\KFLT@subgrpc}{}  
203 \newboolean{KFLT@subgrpcstar}
```

Bool KFLT@subgrpcstart Sub-caption starred?

Key [subfloat container] c Caption

```
204 \define@key{KFLT@subgrpkeys}{c}{%
205   \renewcommand{\KFLT@subgrpc}{\#1}\setboolean{KFLT@subgrpcstar}{false}%
206 }
```

Key [subfloat container] cstar Starred caption?

```
207 \define@key{KFLT@subgrpkeys}{cstar}{%
208   \renewcommand{\KFLT@subgrpc}{\#1}\setboolean{KFLT@subgrpcstar}{true}%
209 }
```

Key [subfloat container] sc Short caption

```
210 \define@key{KFLT@subgrpkeys}{sc}{%
211   \renewcommand{\KFLT@subgrpsc}{\#1}%
212   \setboolean{KFLT@subgrpscgiven}{true}%
213 }
```

\KFLT@subgrpsc Sub-shortcaption storage

```
214 \newcommand{\KFLT@subgrpsc}{}
```

Bool KFLT@subgrpscgiven Sub-shortcaption was given?

```
215 \newboolean{KFLT@subgrpscgiven}
```

\KFLT@subgrptype Subfloats collection type storage: “figure”, “table”

```
216 \newcommand*{\KFLT@subgrptype}{}%
```

Key [subfloat container] l Label

```
217 \define@key{KFLT@subgrpkeys}{l}{\renewcommand{\KFLT@subgrpl}{\#1}%
218 \newcommand*{\KFLT@subgrpl}{}%
```

\KFLT@subgrptextalign Storage for text alignment.

Used for the additional text in the float.

```
219 \newcommand*{\KFLT@subgrptextalign}{}%
```

\KFLT@subgrpt Additional text storage

Used for the additional text in the float.

```
220 \newcommand{\KFLT@subgrpt}{}{}
```

Key [subfloat container] t Additional text — full justification

```
221 \define@key{KFLT@subgrpkeys}{t}{%
222     \renewcommand{\KFLT@subgrpt}{#1}%
223     \renewcommand{\KFLT@subgrptextalign}{}%
224 }
```

Key [subfloat container] t Additional text — center justification

```
225 \define@key{KFLT@subgrpkeys}{tc}{%
226     \renewcommand{\KFLT@subgrpt}{#1}%
227     \renewcommand{\KFLT@subgrptextalign}{\centering}%
228 }
```

Key [subfloat container] t Additional text — aligned left

```
229 \define@key{KFLT@subgrpkeys}{tl}{%
230     \renewcommand{\KFLT@subgrpt}{#1}%
231     \renewcommand{\KFLT@subgrptextalign}{\raggedright}%
232 }
```

Key [subfloat container] t Additional text — aligned right

```
233 \define@key{KFLT@subgrpkeys}{tr}{%
234     \renewcommand{\KFLT@subgrpt}{#1}%
235     \renewcommand{\KFLT@subgrptextalign}{\raggedleft}%
236 }
```

For the `tocdata` package:

Key [subfloat container] ap Artist prefix

```
237 \define@key{KFLT@subgrpkeys}{ap}{\renewcommand{\KFLT@subgrpap}{#1}}
```

\KFLT@subgrpap Storage for artist prefix

```
238 \newcommand*\KFLT@subgrpap{}{}
```

Key [subfloat container] af Artist first name

```
239 \define@key{KFLT@subgrpkeys}{af}{\renewcommand{\KFLT@subgrpaf}{#1}}
```

\KFLT@subgrpaf Storage for artist first name

240 \newcommand*\{\KFLT@subgrpaf\}{}{}

Key [subfloat container] a1 Artist last name

241 \define@key{KFLT@subgrpkeys}{a1}{\renewcommand{\KFLT@subgrpal}{#1}}

\KFLT@subgrpal Storage for artist last name

242 \newcommand*\{\KFLT@subgrpal\}{}{}

Key [subfloat container] as Artist suffix

243 \define@key{KFLT@subgrpkeys}{as}{\renewcommand{\KFLT@subgrpas}{#1}}

\KFLT@subgrpas Storage for artist suffix

244 \newcommand*\{\KFLT@subgrpas\}{}{}

Key [subfloat container] aup Author prefix

245 \define@key{KFLT@subgrpkeys}{aup}{\renewcommand{\KFLT@subgrpaup}{#1}}

\KFLT@subgrpaup Storage for author prefix

246 \newcommand*\{\KFLT@subgrpaup\}{}{}

Key [subfloat container] auf Author first name

247 \define@key{KFLT@subgrpkeys}{auf}{\renewcommand{\KFLT@subgrpauf}{#1}}

\KFLT@subgrpauf Storage for author first name

248 \newcommand*\{\KFLT@subgrpauf\}{}{}

Key [subfloat container] aul Author last name

249 \define@key{KFLT@subgrpkeys}{aul}{\renewcommand{\KFLT@subgrpaul}{#1}}

\KFLT@subgrpaul Storage for author last name

250 \newcommand*\{\KFLT@subgrpaul\}{}{}

Key [subfloat container] aus Author suffix

```
251 \define@key{KFLT@subgrpkeys}{aus}{\renewcommand{\KFLT@subgrpaus}{#1}}
```

\KFLT@subgrpaus Storage for author suffix

```
252 \newcommand*{\KFLT@subgrpaus}{}%
```

3.10 Computing image width

Len \KFLT@imagewidth Computed width of the image

```
253 \newlength{\KFLT@imagewidth}
```

Len \KFLT@boxwidth Computed width of the container box

```
254 \newlength{\KFLT@boxwidth}
```

Len \KFLT@wrapwidth Computed width of the wrapped figure

```
255 \newlength{\KFLT@wrapwidth}
```

\KFLT@findwidths Figure out how wide to make an image and its container

```
256 \newcommand*{\KFLT@findwidths}{%
```

Default to a box of full \linewidth minus the potential frame:

```
257 \ifbool{KFLT@ft}{% tight frame?
258   {\setlength{\KFLT@boxwidth}{\linewidth - 2\KFLTtightframewidth}}%
259   {% not tight frame
260     \ifbool{KFLT@f}{% loose frame?
261       {\setlength{\KFLT@boxwidth}{\linewidth - 2\KFLTlooseframewidth}}%
262       {\setlength{\KFLT@boxwidth}{\linewidth}}% no frame
263     }% not tight frame
264 }
```

Several width options exist. First see if width was given:

```
264 \ifdimgreater{\KFLT@w}{0pt}{%
```

Width was given:

```
265   {\setlength{\KFLT@imagewidth}{\KFLT@w}}%
266   {% width not given
```

Use full \linewidth or only a fraction:

```
267      \ifcsempty{KFLT@lw}%
268          {\setlength{\KFLT@imagewidth}{\KFLT@boxwidth}}%
269          {\setlength{\KFLT@imagewidth}{\KFLT@lw\KFLT@boxwidth}}%
270      }% width not given
```

The wrap width is the same as the image width, unless specified:

```
271 \ifdimgreater{\KFLT@ww}{0pt}%
```

Width was given:

```
272      {%
273          \setlength{\KFLT@wrapwidth}{\KFLT@ww}}%
274      { % width not given
```

If `wlw`, use a fraction of line width, else if none given use the same as the image width.

```
275      \ifcsempty{KFLT@wlw}%
276          {%
277              \setlength{\KFLT@wrapwidth}{\KFLT@imagewidth}}%
278          {%
279              \setlength{\KFLT@wrapwidth}{\KFLT@wlw\KFLT@boxwidth}}%
280      }% width not given
281 }
```

3.11 Framing and rotation

A user-redefinable macro and length to tightly frame the contents.

`\KFLTtightframe` may be redefined to a macro which frames its contents. `\KFLTtightframewidth` should be redefined to the total width of the new frame and its separation.

```
\KFLTtightframe {\langle contents\rangle}

282 \newcommand{\KFLTtightframe}[1]{%
283     \setlength{\fboxsep}{0pt}%
284     \setlength{\fboxrule}{.4pt}%
285     \fbox{\#1}%
286 }
287
```

Len `\KFLTtightframewidth` Must be set to the combined width of the tight frame and separation used by `\KFLTtightframe`.

```
288 \newlength{\KFLTtightframewidth}
289 \setlength{\KFLTtightframewidth}{.4pt}
```

\KFLTlooseframe {*contents*}

A user-redefinable macro and length to loosely frame the contents.

\KFLTlooseframe may be redefined to a macro which frames its contents. \KFLTlooseframewidth should be redefine to the total width of the new frame and its separation.

```
290 \newcommand{\KFLTlooseframe}[1]{%
291   \setlength{\fboxsep}{3pt}%
292   \setlength{\fboxrule}{.4pt}%
293   \fbox{#1}%
294 }
```

Len \KFLTlooseframewidth Must be set to the combined width of the loose frame and separation used by \KFLTlooseframe.

```
295 \newlength{\KFLTlooseframewidth}
296 \setlength{\KFLTlooseframewidth}{3.4pt}
```

\KFLT@frame {*contents*}

Frames the contents according to the f key. To be nested for further processing.

```
297 \newcommand{\KFLT@frame}[1]
298 {%
299   \ifbool{KFLT@ft}%
300     {\KLTtightframe{#1}}%
301     {%
302       \ifbool{KFLT@f}%
303         {\KFLTlooseframe{#1}}%
304         {%
305           \noexpand{#1}%
306         }%
307     }%
308 }
```

KFLT@findenvboxwidth Figures the width of the contents of \KFLT@envbox plus the frame:

```
307 \newcommand{\KFLT@findenvboxwidth}{%
308   \settowidth{\KLTimageboxwidth}{\usebox{\KFLT@envbox}}%
309   \ifbool{KFLT@ft}%
310     {\addtolength{\KLTimageboxwidth}{2\KFLTtightframewidth}}%
311     {%
312       \ifbool{KFLT@f}%
313         {\addtolength{\KLTimageboxwidth}{2\KFLTlooseframewidth}}%
314         {}%
315     }%
316 }
```

```
315      }% not looseframe
316 }
```

3.12 A graphics image from a file

```
\KFLT@onefigureimage {<filename>}
```

Create an image with size, frame, and turn.

```
317 \NewDocumentCommand{\KFLT@onefigureimage}{m}%
318 {%
```

Several possible combinations of linewidth, width, and height are available, and each is treated separately. Scaling and width/height are done first, then framing, then rotation.

```
319 \begin{lrbox}{\KFLT@envbox}%
```

Handle the `lw` key. If `lw` is used, width and height are ignored.

```
320 \ifdimempty{\KFLT@lw}%
321 { % not linewidth
```

Handle the `w` key, which may be used along with the `h` key:

```
322 \ifdimgreater{\KFLT@w}{0pt}%
323 { % width is given
324 \ifdimgreater{\KFLT@h}{0pt}%
```

Width and height are both given:

```
325 { % w and h
326 \includegraphics%
327 [scale=\KFLT@s,%
328 width=\KFLT@imagewidth,height=\KFLT@h]{#1}%
329 }% w and h
```

Only width:

```
330 { % only w
331 \includegraphics%
332 [scale=\KFLT@s,width=\KFLT@imagewidth]{#1}%
333 }% only w
334 }% width is given
```

Width was not given, so maybe handle h alone:

```
335      {%
336          width is not given
337          \ifdimgreater{\KFLT@h}{0pt}{%
```

h was given:

```
337      {\includegraphics[scale=\KFLT@s,height=\KFLT@h]{#1}}%
```

If none were given, use the image's natural size:

```
338      {\includegraphics[scale=\KFLT@s]{#1}}%
339      }% width is not given
340      }% not linewidth
341      {% linewidth given
342          \includegraphics[scale=\KFLT@s,width=\KFLT@imagewidth]{#1}%
343      }%
344      \end{lrbox}%
345      \unskip%
346      \KFLT@findenvboxwidth%
347      \begin{turn}{\KFLT@r}%
348      \KFLT@frame{\usebox{\KFLT@envbox}}%
349      \unskip%
350      \end{turn}%
351 }
```

3.13 Printing the caption

```
\KFLT@dosimplecaption {\langle star? \rangle} {\langle short cap or -NO VALUE- \rangle} {\langle caption \rangle}
```

Calls \caption depending on several combinations of star and short captions being given.

```
352 \NewDocumentCommand{\KFLT@dosimplecaption}{m m m}
353 {%
354     \unskip%
355     \IfBooleanTF{#1}{ star?
356         {\IfValueTF{#2}{\caption*[#2]{#3}}{\caption*{#3}}}
357         {\IfValueTF{#2}{\caption[#2]{#3}}{\caption{#3}}}
358 }
```

There are two versions of \KFLT@docaption, depending on whether tocdata is loaded.

```
359 \@ifpackageloaded{tocdata}
360 {%
361     tocdata loaded
362 }
```

```
\KFLT@@docaption 1: artist/author {\langle 2: empty or "u" \rangle} {\langle 3: star? \rangle} {\langle 4: short caption \rangle} {\langle 5: caption \rangle} {\langle 6: empty or "subgrp" \rangle}

361 \newcommand*{\KFLT@@docaption}[6]{%
  (tocdata does not expand its text argument before checking for empty.)

  362 \addvspace{\smallskipamount}%
  363 \ifcsemptry{\KFLT@#6t}{%
  364   \IfBooleanTF{#3}{%
  365     {%
  366       \csuse{caption#1}*[#4]{#5}%
  367       []%
  368       [\csuse{KFLT@#6a#2p}]%
  369       {\csuse{KFLT@#6a#2f}}%
  370       {\csuse{KFLT@#6a#21}}%
  371       [\csuse{KFLT@#6a#2s}]%
  372     }{%
  373       \csuse{caption#1}[#4]{#5}%
  374       []%
  375       [\csuse{KFLT@#6a#2p}]%
  376       {\csuse{KFLT@#6a#2f}}%
  377       {\csuse{KFLT@#6a#21}}%
  378       [\csuse{KFLT@#6a#2s}]%
  379     }%
  380   }{%
  381     \ifcsstring{\KFLT@#6textalign}{}{\csuse{td#1textjustify}}{}{%
  382     \ifcsstring{\KFLT@#6textalign}{\centering}{\csuse{td#1textcenter}}{}{%
  383     \ifcsstring{\KFLT@#6textalign}{\raggedleft}{\csuse{td#1textright}}{}{%
  384     \ifcsstring{\KFLT@#6textalign}{\raggedright}{\csuse{td#1textleft}}{}{%
  385     \IfBooleanTF{#3}{%
  386       {%
  387         \csuse{caption#1}*[#4]{#5}%
  388         [\csuse{KFLT@#6t}]%
  389         [\csuse{KFLT@#6a#2p}]%
  390         {\csuse{KFLT@#6a#2f}}%
  391         {\csuse{KFLT@#6a#21}}%
  392         [\csuse{KFLT@#6a#2s}]%
  393       }{%
  394         \csuse{caption#1}[#4]{#5}%
  395         [\csuse{KFLT@#6t}]%
  396         [\csuse{KFLT@#6a#2p}]%
  397         {\csuse{KFLT@#6a#2f}}%
  398         {\csuse{KFLT@#6a#21}}%
  399         [\csuse{KFLT@#6a#2s}]%
  400       }%
  401     }{%
  402   }}
```

```
\KFLT@docaption * [<2:short caption] {<3:caption} {<4: empty or "subgrp"}
```

Depending on whether the `tocdata` package is present, and an artist is specified, use either `\caption` or `\captionartist`.

The fourth argument is {} if a regular float, or `subgrp` if `keysubfigs` or `keysubtabs`.

See Table 2 for the possible combinations of the caption-related keys: `c`, `cstar`, and `sc`.

With `tocdata`:

```
403 \NewDocumentCommand{\KFLT@docaption}{s o m m}
404 {%
```

Is the last name empty? Assume no artist if so.

```
405     \ifcsemptry{\KFLT@#4al}%
406     {% figure w/o artist
407         \ifcsemptry{\KFLT@#4aul}%
408             {% figure w/o artist or author
```

A figure without an artist or author uses the simple caption.

```
409             \KFLT@dosimplecaption{#1}{#2}{#3}%
410             }% figure w/o artist or author
```

A figure with an author uses the `tocdata \captionauthor` macro, which also creates an index entry.

```
411             {% figure w/ author
412                 \KFLT@docaption{author}{u}{#1}{#2}{#3}{#4}%
413             }% figure w/ author
414             }% figure w/o artist
415             {% figure with an artist
```

A figure with an artist uses the `tocdata \captionartist` macro, which also creates an index entry.

```
416             \KFLT@@docaption{artist}{}{#1}{#2}{#3}{#4}%
417             }% figure with an artist
418 }% KFLT@tocdata
419 }% tocdata loaded
420 { % no tocdata
```

Without `tocdata`:

```
\KFLT@docaption * [<2:short caption] {<3:caption} {<4: empty or “subgrp”}
```

```
421 \NewDocumentCommand{\KFLT@docaption}{s o m m}
422 {%
```

If `tocdata` is not loaded, use a simple caption.

```
423     \KFLT@dosimplecaption{#1}{#2}{#3}%
```

Create an index entry depending on whether there is a last, first name:

```
424     \ifcsemptry{KFLT@#4al}%
425     {%
426         \ifcsemptry{KFLT@#4aul}%
427         {}%
428         {%
429             \ifcsemptry{KFLT@#4auf}%
430                 {\index{\csuse{KFLT@#4aul}}}%
431                 {\index{\csuse{KFLT@#4aul}, \csuse{KFLT@#4auf}}}%
432             }%
433             }%
434             {%
435                 \ifcsemptry{KFLT@#4af}%
436                     {\index{\csuse{KFLT@#4al}}}%
437                     {\index{\csuse{KFLT@#4al}, \csuse{KFLT@#4af}}}%
438             }%
439         }%
440     }%
```

```
\KFLT@caption {<empty or “subgrp”>}
```

Caption-creation logic.

The argument is {} if a regular float, or `subgrp` if `keysubfigs` or `keysubtabs`.

See Table 2 for the possible combinations of the caption-related keys: `c`, `cstar`, and `sc`.

```
441 \newcommand{\KFLT@caption}[1]{%
```

A starred caption is printed but not numbered.

```
442     \ifbool{KFLT@#1cstar}{starred caption?}{%
```

This is a starred caption:

```
443     {%
```

A key given as `cstar={}` yields a float with no caption at all.

```
444     \ifcsemptry{KFLT@#1c}%
445         {}%
```

Non-empty starred caption might have a LOF entry if it has a short caption `sc` key:

```
446     {%
447         % non-empty starred caption
        \ifcsemptry{KFLT@#1sc}%
```

No `sc` short caption, but there is a `cstar`, so no LOF entry:

```
448     {}%
```

Both `cstar` and `sc` were given, so add a LOF entry:

```
449     {%
450         % non-empty cstar and sc:
        \edef\KFLT@listtype{\csuse{KFLT@#1type}}%
451         \addcontentsline{\csuse{ext@\KFLT@listtype}}%
452             {\csuse{KFLT@#1type}}{\KFLT@sc}%
453     }%
        }% non-empty cstar and sc
```

`cstar` was given, so create an unnumbered caption:

```
454     \KFLT@docaption*\csuse{KFLT@#1c}{#1}%
455     }%
456     }% starred caption
```

Unstarred caption `c` was given, so number this float:

```
457     {%
458         % unstarred caption
        \ifcsemptry{KFLT@#1sc}%
459             {}% no short cap
460                 \KFLT@docaption{\csuse{KFLT@#1c}}{#1}%
461             }% no short cap
462             {}% short cap
463                 \KFLT@docaption[\csuse{KFLT@#1sc}]%
464                     {\csuse{KFLT@#1c}}{#1}%
465             }% short cap
```

Optional label:

```
466     \ifcsemptry{KFLT@#1l}%
467         {}%
468             {\label{\csuse{KFLT@#1l}}}%
469             }% unstarred caption
470 }
```

3.14 Defaults for a new float

\KFLT@defaults Defaults all settings before reading the keys.

```

471 \newcommand*\{ \KFLT@defaults}{%
472     \setboolean{KFLT@cont}{false}%
473     \renewcommand{\KFLT@c}{()}%

503     \renewcommand{\KFLT@va}{c}%
504 }
```

3.15 Row start/end processing

\KFLT@maybestartfloatrow Counts rows

After ending a preexisting row, move to the next row. The use of \defcounter makes this counter change local.

```
505 \newcommand*\{ \KFLT@maybestartfloatrow}{%
```

```

506      \KFLT@maybeendfloatrow%
507      \defcounter{KFLT@thiscol}{\value{KFLT@thiscol}+1}%
508 }

```

\KFLT@maybeendfloatrow Counts rows

Adds vertical space then resets to allow the start of a new row. The use of \defcounter makes this counter change local.

```

509 \newcommand*{\KFLT@maybeendfloatrow}{%
510   \ifnumless{\value{KFLT@thiscol}}{\value{KFLT@numcols}}{%
511     {}% thiscol < numcols
512     {}% >=
513     \par%
514     \addvspace{.75\floatsep}%
515     \defcounter{KFLT@thiscol}{0}%
516   }%
517 }%

```

3.16 Key environment helper macros

\KFLT@trackrows Tracks and spaces rows and columns.

```

518 \newcommand{\KFLT@trackrows}{%
519 {%

```

If are nested inside a keyfloats or a subfloat:

```

520   \ifboolexpr{%
521     test {\ifnumgreater{\value{KFLT@keyfloatdepth}}{0}} or%
522     \bool{KFLT@inkeysubfloats}%
523   }%
524   {}% nested

```

Tracks row start and end:

```

525   \KFLT@maybestartfloatrow%

```

Possibly fill space between columns:

```

526   \ifnumgreater{\value{KFLT@thiscol}}{1}{%
527     \hfill}%
528   {}% nested
529   {}% not nested
530 }
531

```

```
\KFLT@addtext {⟨empty or “subgrp”⟩}
```

Adds optional additional text.

The argument is {} if a regular float, or subgrp if keysubfigs or keysubtabs.

```
532 \newcommand{\KFLT@addtext}[1]
533 {%
```

Is there text to add?

```
534     \ifcsempty{\KFLT@#1t}%
535     {}% no text
536     {}% text to add
537     {}% local
```

Add some space, then create a full-width minipage to contain the text:

```
538     \addvspace{\smallskipamount}%
539     \begin{minipage}{\linewidth}%
```

Inside this minipage, temporarily prevent underfull \hbox warnings:

```
540     \hbadness=10000\relax%
```

Set the alignment and some text parameters:

```
541     \csuse{\KFLT@#1textalign}%
542     \footnotesize%
543     \setlength{\parskip}{1.5ex}%
544     \setlength{\parindent}{0em}%
```

Typeset the actual text:

```
545     \csuse{\KFLT@#1t}%
```

Close it all out with a little more space:

```
546     \end{minipage}%
547     \par\addvspace{2ex}%
548     {}% local
549     {}% text to add
550 }
```

```
\KFLT@optionalname {⟨name⟩}
```

Adds optional artist's name and the following space.

```

551 \newcommand{\KFLT@optionalname}[1]
552 {%
553     \ifblank{#1}%
554     {}%
555     {#1\sim}%
556 }

```

\KFLT@addartisttext {\langle empty or “subgrp”\rangle}

Adds optional additional text.

The argument is {} if a regular float, or subgrp if keysubfigs or keysubtabs.

One of two versions is used, depending on whether the tocdata package is available.

If tocdata is loaded and this float has an artist or author, then the float’s artist’s information and optional text will be printed elsewhere by \KFLT@caption. Otherwise, the text is printed here.

Two versions, depending on whether tocdata is loaded:

```

557 \@ifpackageloaded{tocdata}
558 {%

```

If tocdata is loaded:

```

559 \newcommand{\KFLT@addartisttext}[1]
560 {%

```

Only add text if it is a figure without an artist or author name. If an artist or author is given, the name and text will be added by tocdata.

```

561     \ifcsempty{\KFLT@#1al}{%
562         \ifcsempty{\KFLT@#1au}{%
563             \KFLT@addtext{\#1}%
564         }%
565     }%
566 }%
567     {}% fig w/ artist: text will be added by \captionartist in \KFLT@caption
568 }% KFLT@addartisttext
569 }% tocdata loaded

```

If tocdata is not loaded, the name and text are added here:

```

570 }% tocdata not loaded

```

Factored from \KFLT@addartisttext

```
571 \newcommand{\KFLT@addartisttext}[3]{%
```

Add space and create the name inside a full-width minipage:

```
572     \addvspace{\medskipamount}%
573     \begin{minipage}{\linewidth}%

```

Inside this minipage, temporarily prevent underfull \hbox warnings:

```
574     \hbadness=10000\relax%
```

Text alignment is #3, and depends on artist or author:

```
575     #3%
```

#1 is empty or 'subgrp'
#2 is empty for artist, 'u' for author:

```
576     \footnotesize\textrm{%
577         \KFLT@optionalname{\csuse{\KFLT@#1a#2p}}%
578         \KFLT@optionalname{\csuse{\KFLT@#1a#2f}}%
579         \csuse{\KFLT@#1a#2l}%
580         \csuse{\KFLT@#1a#2s}%
581     }%
582     \end{minipage}%
583     \par\addvspace{2ex}%
584 }
585
586 \newcommand{\KFLT@addartisttext}[1]%
587 {%
```

Only use the artist information if a last name is given:

```
588     \ifcsempty{\KFLT@#1al}%
589     {%
590         \ifcsempty{\KFLT@#1aul}%
591             {}%
592             \authorlastnamenotgiven%
593             \KFLT@addartisttext{\#1}{u}{\raggedleft}%
594             \authorlastnamenotgiven%
595             \authorlastnamenotgiven%
596             \authorlastnamegiven%
597             \KFLT@addartisttext{\#1}{}{\centering}%
598     }%
```

Any additional text follows the artist's name:

```
599     \KFLT@addtext{\#1}%

```

```
600 }% KFLT@addartisttext  
601 }% to pdata not loaded
```

Len \KFLTimageboxwidth The computed width of the object.

This may be used as the width parameter of a minipage to encase the object.

```
602 \newlength{\KFLTimageboxwidth}
```

Env KFLT@boxinner Typeset the contents in a width which depends on the keys.

```
603 \newsavebox{\KFLT@envbox}  
604  
605 \NewDocumentEnvironment{KFLT@boxinner}{}  
606 {%
```

(Possibly) frame the contents of an lrbox:

```
607 \begin{lrbox}{\KFLT@envbox}%
```

Rotate the contents:

```
608 \turn{\KFLT@r}%
```

Box the contents in the width computed by \KFLT@findwidths:

```
609 \minipage{\KFLT@imagewidth}%
```

Spacing inside the box. Also default to regular justified text alignment.

```
610 \setlength{\parskip}{2ex}%  
611 \renewcommand{\arraystretch}{\KFLT@stretch}%  
612 }% keyboxinner
```

End of the environment:

```
613 {%
```

```
614 \endminipage%
```

End the rotated box:

```
615 \endturn%
```

Possibly frame:

```
616 \end{lrbox}%
```

```

617      \KFLT@frame{\usebox{\KFLT@envbox}}%
618      \par%
619 }% endkeyboxinner

\KFLT@boxkeys {⟨keys⟩} {⟨float type⟩}

```

Default the options, adjust for a table, then parse the keys:

```

620 \NewDocumentCommand{\KFLT@boxkeys}{+m m}
621 {%
622     \KFLT@defaults%
623     \renewcommand{\KFLT@type}{#2}%
624     \setkeys{KFLT@keys}{#1}%
625 }

```

Bool `KFLT@captionistop` Saves the value of `\caption@position`, which may become unreliable if using Koma-script and

```

\captionsetup[table]{position=above}

626 \newbool{KFLT@captionistop}

```

`\KFLT@LWR@hook@boxouter` Used by `\warp`.

```

627 \newcommand*{\KFLT@LWR@hook@boxouter}{}%

```

Env `KFLT@boxouter` {⟨star?⟩} {⟨loc⟩}

Boxes the contents of figures and floats.

Not used by subfigures.

```

628 \NewDocumentEnvironment{KFLT@boxouter}{m m}
629 {%
  boxouter

```

The `keyfigure` and `keytable` environments handle the contents in one of three possible ways, depending on whether it is called alone, inside a `keyfloats` environment, or inside a `keysubfigs` or `keysubtabs` environment.

Start the new subfigure or subtable, of the given width:

```

630     \ifbool{KFLT@inkeysubfloats}{%
631       \csuse{sub\KFLT@type}{\KFLT@rowboxwidth}}% subfloat

```

If `keyfloats`, place the contents inside a `minipage`:

```

632      {%
633        not subfloat:
634        \ifnumgreater{\value{KFLT@keyfloatdepth}}{0}%
635        {%
636          keyfloats
637          \ifbool{KFLT@keywrap}{%
638            \minipage[t]{\KFLT@rowboxwidth}%
639            \minipage[\KFLT@va]{\KFLT@rowboxwidth}%
640            \captionsetup{type=\KFLT@type}%
641          }%
642        }%
643      }%
644      {%
645        \par\addvspace{\baselineskip}%
646        \noindent%
647        \minipage[t]{\linewidth}%
648        \captionsetup{type=\KFLT@type}%
649      }%
650      {%
651        not keyfloats

```

A hook for `\warp` to set `\ linewidth`, etc.

```
641          \KFLT@LWR@hook@boxouter%
```

Not a subfloat or keyfloats, so create a single float.

See if inside a keywrap. If so, force [H] and vertical align top.

```

642          \ifbool{KFLT@keywrap}{%
643            {%
644              \par\addvspace{\baselineskip}%
645              \noindent%
646              \minipage[t]{\linewidth}%
647              \captionsetup{type=\KFLT@type}%
648            }%
649          }%
650          {%
651            not a keywrap

```

See if the float should [W]rap:

```
650          \ifstrequal{#2}{W}{%
```

Place [W], so create a wrapfloat using the `wrapfig` package:

```
651          {%
652            [W]

```

Temporarily figure out `\KFLT@imagewidth`, and make the wrapped figure environment as wide as the desired image size plus frame:

```

652          \KFLT@findwidths%
653          \wrapfloat{\KFLT@type}[\KFLT@wn]{\KFLT@wp}[\KFLT@wo]%
654          {\KFLT@wrapwidth+2\KFLT@looseframewidth}%
655          \minipage{\KFLT@wrapwidth+2\KFLT@looseframewidth}%

```

Inside this minipage, temporarily prevent underfull `\hbox` warnings:

```

656          \hbadness=1000\relax%
657          \normalcolor\reset@font\normalsize%

```

Change the interior image to the discovered fixed width.

```

658          \renewcommand{\KFLT@lw}{}
659          \renewcommand{\KFLT@w}{\KFLT@imagewidth}
660          \renewcommand{\KFLT@wlw}{}
661          \renewcommand{\KFLT@ww}{0pt}
662          }% [W]
663          {% not [W]

```

See if the float should be positioned in the [M]argin:

```
664          \ifstreq{#2}{M}%

```

Place [M], so create a marginfloat:

```

665          {% [M]
666              \KFLT@marginfloat[\KFLT@mo]{\KFLT@type}%
667          }% [M]
668          {% not [M]

```

See if the float should be positioned [H]ere:

```
669          \ifstreq{#2}{H}%

```

Place [H], so create an inline minipage:

```

670          {% [H]
671              \vskip\intextsep%
672              \noindent\minipage[\KFLT@va]{\linewidth}%
673                  \normalcolor\reset@font\normalsize%
674                  \captionsetup{type=\KFLT@type}%
675          }% [H]

```

Not [H], so create a float: For a starred float, make a two-column table in a two-col format.

```

676          {% not [H]
677              \IfBooleanTF{#1}%
678                  {\csuse{\KFLT@type*}[#2]}%
679                  {\csuse{\KFLT@type}[#2]}%
680          }% not [H]
681          }% not [M]
682          }% not [W]
683          }% not keywrap
684          }% not keyfloats
685          }% not subfloat

```

Handle a continued float. Ignored if in a subfloat.

```
686 \ifbool{KFLT@cont}{\ContinuedFloat}{}%
```

Figure out image and parbox widths for the contents:

```
687 \KFLT@findwidths%
```

Place the caption above the contents depending on `caption position` option:

```
688 \caption@iftop{\booltrue{KFLT@captionistop}}{\boolfalse{KFLT@captionistop}}%
689 \ifbool{KFLT@captionistop}{\KFLT@caption}{}%
```

Typeset the contents:

```
690 \center\unskip%
691 }% boxouter
```

End of the KFLT@boxouter environment:

```
692 {%
693 \endcenter\unskip%
694 \addvspace{\smallskipamount}%
```

Optionally print artist's name and additional text:

```
695 \KFLT@addartisttext{}%
```

Place the caption below the contents depending on `caption position` option:

```
696 \ifbool{KFLT@captionistop}{}{\KFLT@caption}{}%
```

If are inside `keysubtabs`, end the subtable:

```
697 \ifbool{KFLT@inkeysubfloats}%
698 {%
699 \csuse{endsub\KFLT@type}%
700 }% subfloat
701 {%
702 \ifnumgreater{\value{KFLT@keyfloatdepth}}{0}{%
703 \keyfloats%
704 \endminipage}%
705 }% keyfloats
706 {%
707 }
```

Not subfloat or `keyfloats`, so is an individual float.

Close the minipage or float:

See if in a keywrap:

```
707          \ifbooleq{\KFLT@keywrap}{%
708              \endminipage%
709              \par\addvspace{\baselineskip}%
710          }{%
711      }% not keywrap
```

See if the float should [W]rap:

```
712          \ifstreq{\#2}{W}{%
```

Place [W], so close the wrap float:

```
713          {%
714              \endminipage%
715              \endwrapfloat%
716          }% [W]
717          {%
718      }% not[W]
```

See if the float should be positioned in the [M]argin:

```
718          \ifstreq{\#2}{M}{%
```

[M], so close the marginfloat:

```
719          {%
720              \endKFLT@marginfloat%
721          }% [M]
```

[H] or float:

```
722          {%
723              \ifstreq{\#2}{H}{%
724                  {%
725                      \endminipage% [H]
726                      \vskip\intextsep%
727                  }%
728                  {%
729                      \IfBooleanTF{\#1}{%
730                          \csuse{\end\KFLT@type*}%
731                          \csuse{\end\KFLT@type}%
732                      }%
733                      {%
734                          \not{[H]}%
735                      }%
736                  }%
737              }%
738          }% not[H]
```

```

736      }% not keyfloats
737      }% not subfloat
738 }% endkeyboxouter

```

\KFLT@ignorespaces {*commandname*} Only do command if not nested inside something.

```

739 \newcommand*{\KFLT@ignorespaces}[1]{%
740     \ifboolexpr{%
741         test {\ifnumgreater{\value{KFLT@keyfloatdepth}}{0}} or%
742         \bool{KFLT@inkeysubfloats}%
743     }{}{\csuse{#1}}%
744 }

```

\KFLT@ignorespaces Only \ignorespaces if not nested inside something.

```

745 \newcommand*{\KFLT@ignorespaces}{%
746     \KFLT@ignorespaces{ignorespaces}%
747 }

```

\KFLT@envignorespaces Only \ignorespaces if not nested inside something.

```

748 \newcommand*{\KFLT@envignorespaces}{%
749     \KFLT@ignorespaces{ignorespacesafterend}%
750 }

```

3.17 The \KFLT@keyfl macro

\KFLT@keyflt {*1:star*} {*2:loc*} {*3:type*} {*4:keys/values*} {*5:contents*}

A lower-level macro to generate a float with its contents. This is used by \keyfig and \keyflt.

```

751 \NewDocumentCommand{\KFLT@keyflt}{m m m +m +m}
752 {%
753     \ifcsdef{ftype@\#3}{}{%
754         \PackageError{keyfloat}%
755         {%
756             \protect\keyflt: Invalid float type.\MessageBreak%
757             \protect\keyflt*[loc]{type}{keys/values}{contents}\MessageBreak%
758             Also, \protect\keyflt\space is not an environment
759         }%
760     }%

```

```

761           Check argument order and float type.
762       }%
763   }%
764   \KFLT@ignorespaces%
765   \KFLT@trackrows%
766   \KFLT@boxkeys{#4}{#3}%
767   \begingroup%
768   \KFLT@boxouter{#1}{#2}%
769   #5%
770   \endKFLT@boxouter%
771   \endgroup%
772   \KFLT@ignorespaces%
773 }
```

3.18 The `\keyflt` macro

`\keyflt * [<loc>] {<type>} {<keys/values>} {<contents>}`

A user-level macro to generate a float with its contents centered inside an inner box. This may be used by itself, or inside a keyfloats or keysubtabs environment.

```

774 \NewDocumentCommand{\keyflt}{s O{tbp} m +m +m}
775 {%
776   \KFLT@keyflt{#1}{#2}{#3}{#4}%
777   \KFLT@boxinner%
778   \centering%
779   #5%
780   \endKFLT@boxinner%
781 }%
782 }
```

`\endkeyflt` Generates an error in case the user tried to use `\keyflt` as an environment.

```

783 \def\endkeyflt{%
784   \PackageError{keyfloat}
785   {%
786     \protect\end{keyflt}: \MessageBreak
787     \protect\keyflt\space is a macro, not an environment.\MessageBreak
788     Perhaps you want the keyfloat environment instead%
789   }
790   {%
791     Use \protect\begin{keyfloat} ... \protect\end{keyfloat}.
792   }
793 }
```

3.19 The keyfloat environment

```
\KFLT@keyfloatstart {⟨star?⟩} {⟨loc⟩} {⟨float type⟩} {⟨keys/values⟩}

794 \newcommand{\KFLT@keyfloatstart}[4]{%
795     \KFLT@envignorespaces%
796     \KFLT@boxkeys{#4}{#3}%
797     \KFLT@boxouter{#1}{#2}%
798     \KFLT@boxinner%
799 }

\KFLT@keyfloatend

800 \newcommand{\KFLT@keyfloatend}{%
801     \endKFLT@boxinner%
802     \endKFLT@boxouter%
803     \KFLT@envignorespaces%
804 }

Env keyfloat * [⟨loc⟩] {⟨float type⟩} {⟨keys/values⟩}

805 \NewDocumentEnvironment{keyfloat}{s 0{tbp} m +m}
806 {%
807     \KFLT@keyfloatstart{#1}{#2}{#3}{#4}%
808 }%
809 {%
810     \KFLT@keyfloatend%
811 }
```

Before keyfloat Extra code to track rows outside of the keyfloat environment, before it starts. This is done to allow nesting without losing track of the prior level.

```
812 \BeforeBeginEnvironment{keyfloat}{%
813     \KFLT@trackrows%
814 }
```

3.20 The keyfigure environment

```
Env keyfigure * [⟨loc⟩] {⟨keys/values⟩}

815 \NewDocumentEnvironment{keyfigure}{s 0{tbp} +m}
816 {%
817     \KFLT@keyfloatstart{#1}{#2}{figure}{#3}%
818 }%
```

```

819 {%
820     \KFLT@keyfloatend%
821 }

```

Before keyfigure Extra code to track rows outside of the keyfigure environment, before it starts. This is done to allow nesting without losing track of the prior level.

```

822 \BeforeBeginEnvironment{keyfigure}{%
823     \KFLT@trackrows%
824 }

```

3.21 The \keyfig macro

```
\keyfig * [<2:loc>] {<3:keys/values>} {<4:image filename>}
```

A user-level macro to generate a figure with an image. This may be used by itself, or inside a keyfloats or keysubfigs environment.

```

825 \NewDocumentCommand{\keyfig}{s 0{tbp} +m m}
826 {%
827     \KFLT@keyflt{#1}{#2}{figure}{#3}{%
828         \KFLT@onefigureimage{#4}%
829     }%
830 }

```

3.22 The \keyfigbox macro

```
\keyfigbox * [<loc>] {<keys/values>} {<box contents>}
```

A user-level macro to generate a figure with arbitrary paragraph contents. This may be used by itself, or inside a keyfloats or keysubtabs environment.

```

831 \NewDocumentCommand{\keyfigbox}{s 0{tbp} +m +m}
832 {%
833     \KFLT@ignorespaces%
834     \KFLT@trackrows%
835     \KFLT@boxkeys{#3}{figure}%
836     \begingroup%
837     \KFLT@boxouter{#1}{#2}%

844 }

```

3.23 The \keyparbox macro

```
\keyparbox * [<loc>] {<keys/values>} {<box contents>}
```

A user-level macro to generate a figure with arbitrary paragraph contents, but no number or caption. This is equal to a \keyfigbox with cstar={}. This may be used by itself, or inside a keyfloats or keysubtabs environment.

```
845 \NewDocumentCommand{\keyparbox}{s 0{tbp} +m +m}
846 {%
847     \KFLT@ignorespaces%
848     \KFLT@trackrows%
849     \KFLT@boxkeys{#3}{figure}%
}
```

Force cstar={}:

```
850     \renewcommand{\KFLT@c}{}%
851     \setboolean{KFLT@cstar}{true}%
```

Continue like \figbox:

```
852     \begingroup%
853     \KFLT@boxouter{#1}{#2}%
854     \KFLT@boxinner%
855     #4%
856     \endKFLT@boxinner%
857     \endKFLT@boxouter%
858     \endgroup%
859     \KFLT@ignorespaces%
860 }
```

3.24 The \keytab macro

```
\keytab * [<loc>] {<keys/values>} {<tabular contents>}
```

A user-level macro to generate a table with tabular contents. This may be used by itself, or inside a keyfloats or keysubtabs environment.

```
861 \NewDocumentCommand{\keytab}{s 0{tbp} +m +m}
862 {%
863     \IfBooleanTF{#1}{%
864         \keyflt*[#2]{table}{#3}{#4}%
865     }{%
866         \keyflt[#2]{table}{#3}{#4}%
867     }%
868 }
```

3.25 The keytable environment

```

Env  keytable  * [<loc>] {<keys/values>}

869 \NewDocumentEnvironment{keytable}{s O{tbp} +m}
870 {%
871     \KFLT@keyfloatstart{\#1}{\#2}{table}{\#3}%
872 }%
873 {%
874     \KFLT@keyfloatend%
875 }

```

Before keytable Extra code to track rows outside of the keytable environment, before it starts. This is done to allow nesting without losing track of the prior level.

```

876 \BeforeBeginEnvironment{keytable}{%
877     \KFLT@trackrows%
878 }

```

3.26 A row of floats

\KFLT@nonest Error message if tried to nest subfloats.

```

879 \newcommand*{\KFLT@nonest}{%
880     \ifboolexpr{%
881         test {\ifnumgreater{\value{KFLT@keyfloatdepth}}{0}} or
882         bool {KFLT@inkeysubfloats}%
883     }%
884     {%
885         \PackageError{keyfloat}{%
886             Cannot nest keysubfigs or keysubtabs.\MessageBreak%
887             (Not in outer par mode.)%
888         }%
889     }%
890     {%
891         The subcaption package do not support nested environments,\MessageBreak%
892             so the keyfloat package cannot place a\MessageBreak%
893             keysubfigs or keysubtabs environment inside another,\MessageBreak%
894             or inside a keyfloats.%%
895     }%
896 }%
897 {}%
898 }

```

\KFLT@LWR@hook@keyfloats Used by \warp.

```
899 \newcommand*{\KFLT@LWR@hook@keyfloats}{}%
```

KFLT@LWR@hook@keyfloatsminipage Modified by \warp.

```
900 \newenvironment*{\KFLT@LWR@hook@keyfloatsminipage}[1]
901   {\noindent\begin{minipage}{#1}}
902   {\endminipage}%
```

Env keyfloats * [*loc*] {*num columns*}

User-level macro to create rows of figures/tables. Wrapping occurs after the number of specified columns. keyfloats environments may be nested to create a vertical set of figures next to a single larger figure, for example.

Place \keyfig, \keyfigbox, and \keytab commands inside the keyfloats environment.

Note that *lw* linewidth keys may need to be adjusted inside a keyfloats, keysubfigs, or keysubtabs, since \linewidth changes depending on the number of columns. Likewise, manually-selected *w* width and *h* tags may need to be adjusted to prevent overflow.

```
903 \NewDocumentEnvironment{keyfloats}{s 0{tbp} m}
904 {%
905   \KFLT@envignorespaces%
```

A hook for \warp to set \linewidth, etc.

```
906   \KFLT@LWR@hook@keyfloats%
```

Track the depth:

```
907   \addtocounter{\KFLT@keyfloatdepth}{1}%
```

If [H], nested, subfloats, or keywrap, use a minipage instead of a float:

```
908   \ifboolexpr{%
909     test {\ifstreq{\#2}{H}} or
910     test {\ifnumgreater{\value{\KFLT@keyfloatdepth}}{1}} or
911     bool {\KFLT@inkeysubfloats} or
912     bool {\KFLT@keywrap}%
913   }%
```

Create an inline minipage:

```
914   {\% [H] or nested
```

If nested, use different spacing as was computed in the outer nesting level:

```

915      \ifboolexpr{%
916          test {\ifnumgreater{\value{KFLT@keyfloatdepth}}{1}} or
917          bool {KFLT@inkeysubfloats}
918      }%
919      {%
920          \KFLT@LWR@hook@keyfloatsminipage{\KFLT@rowboxwidth}%
921      }%
922      {%
923          \vskip\intextsep%
924          \KFLT@LWR@hook@keyfloatsminipage{\ linewidth}%
925      }%

```

Reset font and color:

```
926      \normalcolor\reset@font\normalsize%
```

If inside subfloats, generate subfigures by default:

```

927      \ifbool{KFLT@inkeysubfloats}{%
928      }%
929      {\captionsetup*[type=figure]}%
930  }% [H] or nested

```

Isn't [H] or nested

```

931      {%
932          \ifstreq{\#2}{W}%
933          {%

```

[W]:

```

934          \wrapfloat{figure}{0}{.5\ linewidth}%
935          \minipage{\ linewidth}%

```

Inside this minipage, temporarily prevent underfull \hbox warnings:

```

936      \hbadness=10000\relax%
937      \normalcolor\reset@font\normalsize%
938  }%
939  {%
940      \ifstreq{\#2}{M}%
941      {%

```

[M]:

```
942           \KFLT@marginfloat{figure}%
943 }
```

A normal figure:

```
944           {% figure
945             \IfBooleanTF{#1}{starred figure, two-col figure in a two-col format
946               {\begin{figure*}[#2]}%
947               {\begin{figure}[#2]}%
948             }% figure
949             }% not [H]
950 }
```

Compute the width of each entry:

```
951   \ifboolexpr{%
952     test {\ifnumgreater{\value{KFLT@keyfloatdepth}}{1}} or
953     bool {KFLT@inkeysubfloats}
954   }%
```

Nested or subfloats:

```
955   {\setlength{\KFLT@rowboxwidth}{.9\KFLT@rowboxwidth/\real{#3}}}%
```

Keyfloats:

```
956   {\setlength{\KFLT@rowboxwidth}{.9\linewidth/\real{#3}}}%
```

Center the contents:

```
957   \centering%
```

Count columns using \defcounter for a local effect:

```
958   \defcounter{KFLT@numcols}{#3}%
959   \defcounter{KFLT@thiscol}{0}%
960 }% starting keyfloats environment
```

When ending a keyfloats environment:

```
961 }% ending keyfloats environment
```

[H] or rows/subfigs? Close a minipage:

```
962   \ifboolexpr{%
963     test {\ifstreq{\#2}{H}} or
964     test {\ifnumgreater{\value{KFLT@keyfloatdepth}}{1}} or
965     bool {KFLT@inkeysubfloats} or
```

```

966     bool {KFLT@keywrap}
967     }%
968     {% was [H], etc.
969     \endKFLT@LWR@hook@keyfloatsminiplate%
970 %           \end{minipage}%

```

Spacing if nested or not:

```

971     \ifboolexpr{
972         test {\ifnumgreater{\value{KFLT@keyfloatdepth}}{0}} or
973         bool {KFLT@keywrap}
974     }%
975     {}% not nested
976     \vskip\intextsep%
977     }%
978     }% was [H], etc.

```

Not [H]:

```

979     {% not [H], etc.
980     \ifstreq{\#2}{W}%
981     {% [W]:%

```

[W]:

```

982     \endminipage%
983     \endwrapfloat%
984     }%
985     {% not [M]
986     \ifstreq{\#2}{M}%
987     {% [M]:%

```

[M]:

```

988     \endKFLT@marginfloat%
989     }%
990     {% figure

```

A figure:

```

991             \IfBooleanTF{#1}{ starred figure? }{%
992                 \end{figure*}\end{figure}%
993             }%
994             }%
995             }% not [H], etc.

```

Unnest the environment:

```

996     \addtocounter{KFLT@keyfloatdepth}{-1}%
997     \KFLT@envignorespaces%
998 }

```

Before keyfloats Extra code to track rows outside of the keyfloats environment, before it starts. This is done to allow nesting without losing track of the prior level.

```

999 \BeforeBeginEnvironment{keyfloats}{%
1000     \KFLT@trackrows%
1001 }

```

3.27 Subfloats

\KFLT@subgrpdefaults Sets defaults before reading the keys.

```

1002 \newcommand*{\KFLT@subgrpdefaults}{%
1003     \setboolean{KFLT@subgrpcont}{false}%
1004     \renewcommand{\KFLT@subgrpc}{()}%
1005     \setboolean{KFLT@subgrpcstar}{false}%
1006     \renewcommand{\KFLT@subgrpvc}{()}%
1007     \setboolean{KFLT@subgrpscgiven}{false}%
1008     \renewcommand{\KFLT@subgrptype}{figure}%

1011     \renewcommand{\KFLT@subgrpf}{()}%
1012     \renewcommand{\KFLT@subgrpaf}{()}%
1013     \renewcommand{\KFLT@subgrpas}{()}%
1014     \renewcommand{\KFLT@subgrpaup}{()}%
1015     \renewcommand{\KFLT@subgrpauf}{()}%
1016     \renewcommand{\KFLT@subgrpaul}{()}%
1017     \renewcommand{\KFLT@subgrpaus}{()}%
1018     \renewcommand{\KFLT@subgrpt}{()}%
1019     \renewcommand{\KFLT@subgrptextalign}{()}%
1020 }

```

Bool KFLT@subcaptionistop Saves the value of \caption@position, which may become unreliable if using Koma-script and

```
\captionsetup[table]{position=above}
```

```
1021 \newbool{KFLT@subcaptionistop}
```

```
\KFLT@subfloats {<starred?>} {<loc>} {<cols>} {<keys/values>}
```

Start a subfloat environment

```
1022 \NewDocumentCommand{\KFLT@subfloats}{m m m +m}
1023 {%
1024     \KFLT@envignorespaces%
```

Parse the key-value combinations:

```
1025     \setkeys{KFLT@subgrpkeys}{#4}%

```

Nest the environment:

```
1026     \setboolean{KFLT@inkeysubfloats}{true}%

```

Figure out the width of each subfloat. If starred, use the full-page `\textwidth`, else use `\linewidth`. .9 is used to leave a little room between columns.

```
1027     \IfBooleanTF{#1}%
1028         {\setlength{\KFLT@rowboxwidth}{.9\textwidth/\real{#3}}}%
1029         {\setlength{\KFLT@rowboxwidth}{.9\linewidth/\real{#3}}}%
```

If [H], or in a `keywrap`, create an inline minipage:

```
1030     \ifboolexpr{%
1031         test {\ifstreq{\#2}{H}} or
1032         bool {KFLT@keywrap}
1033     }%
1034     {%
1035         \vskip\intextsep\noindent\begin{minipage}{\linewidth}%
1036             \normalcolor\reset@font\normalsize%
1037     }%
```

Not [H]:

```
1038     {%
1039         \ifstreq{\#2}{W}%
1040         {%
1041             \wrapfloat{\KFLT@subgrptype}{0}{.5\linewidth}%
1042             \setlength{\KFLT@rowboxwidth}{.5\KFLT@rowboxwidth}%
1043             \minipage{\linewidth}%

```

[W]:

```
1041             \wrapfloat{\KFLT@subgrptype}{0}{.5\linewidth}%
1042             \setlength{\KFLT@rowboxwidth}{.5\KFLT@rowboxwidth}%
1043             \minipage{\linewidth}%

```

Inside this minipage, temporarily prevent underfull `\hbox` warnings:

```
1044     \hbadness=10000\relax%
1045     \normalcolor\reset@font\normalsize%
```

```

1046      }%
1047      {%
1048          not [H]:%
1049              \ifstreq{#2}{M}%
1049              {%
1049                  [M]:%
1050                      \KFLT@marginfloat{\KFLT@subgrptype}%
1051                          \setlength{\KFLT@rowboxwidth}{.9\marginparwidth/\real{#3}}%
1052                  }%
1053                  {%
1053                      % subfloat

```

A subfloat:

```

1054          \IfBooleanTF{#1}%
1055              {\begin{\KFLT@subgrptype*}[#2]}%
1056                  {\begin{\KFLT@subgrptype}[#2]}%
1057              }%
1058          }%
1059      }%

```

Set the caption type:

```
1060      \captionsetup{type=\KFLT@subgrptype}%
```

Process continued floats:

```

1061      \ifbool{KFLT@subgrpcont}%
1062          {\ContinuedFloat}%
1063      {}%

```

Center the contents:

```
1064      \center\unskip%
```

Place the caption above the contents depending on **caption** position option:

```

1065      \caption@iftop{\booltrue{KFLT@subcaptionistop}}{\boolfalse{KFLT@subcaptionistop}}%
1066      \ifbool{KFLT@subcaptionistop}{\KFLT@caption{subgrp}}{}%

```

Not yet started a row of subfloats. The use of **\defcounter** makes these changes local.

```

1067      \defcounter{KFLT@numcols}{#3}%
1068      \defcounter{KFLT@thiscol}{0}%

```

Create a group for the subfloats. Necessary in case they change **\tdartisttextcenter**, etc.

```

1069      \begingroup%
1070 }

\KFLT@endsubfloats {⟨starred?⟩} {⟨loc⟩}

Ends a subfloat environment.

1071 \newcommand*{\KFLT@endsubfloats}[2]{%

1151   \KFLT@envignorespaces%
1152 }%

```

Provided in case `tufte-book` is not loaded:

```

Env marginfigure [ $\langle offset \rangle$ ]
1153 \ProvideDocumentEnvironment{marginfigure}{O{-1.2ex}}
1154  {\begin{KFLT@marginfloat}[\#1]{figure}}
1155  {\end{KFLT@marginfloat}}
Env margintable [ $\langle offset \rangle$ ]
1156 \ProvideDocumentEnvironment{margintable}{O{-1.2ex}}
1157  {\begin{KFLT@marginfloat}[\#1]{table}}
1158  {\end{KFLT@marginfloat}}

```

3.29 Wrapped floats

Bool KFL@keywrap Tells the next keyfloat to wrap around some text.

```

1159 \newboolean{KFL@keywrap}
1160 \boolfalse{KFL@keywrap}

```

Len \KFLT@keywrapwidth The width of the object to be wrapped beside the text.

```

1161 \newlength{\KFLT@keywrapwidth}

```

Len \KFLT@keywrapparskip The \parskip outside of the keywrap.

```

1162 \newlength{\KFLT@keywrapparskip}

```

Len \KFLT@keywrapparindent The \parindent outside of the keywrap.

```
1163 \newlength{\KFLT@keywrapparindent}
```

Env keywrap {*width*} {*keyfloat*}

The main text is placed in a minipage to the left, and the wrapped content is later placed in another minipage to the right.

```
1164 \DeclareDocumentEnvironment{keywrap}{m +m}%
1165 {%
1166   \par\noindent%
1167   \setlength{\KFLT@keywrapwidth}{\linewidth}%
1168   \addtolength{\KFLT@keywrapwidth}{-\#1}%
1169   \addtolength{\KFLT@keywrapwidth}{-2em}%
1170   \minipage[t]{\KFLT@keywrapwidth}%
1171 %
1172   \setlength{\parskip}{\KFLT@keywrapparskip}%
1173   \setlength{\parindent}{\KFLT@keywrapparindent}%
1174   \booltrue{KFLT@keywrap}%
1175 }%
1176 {%
1177   \par%
1178   \endminipage%
1179   \hfill%
1180   \begin{minipage}[t]{\#1}%
1181   \booltrue{KFLT@keywrap}%
1182   \normalcolor\reset@font\normalsize%
```

Inside this minipage, temporarily prevent underfull \hbox warnings:

```
1183   \hbadness=10000\relax%
1184   #2%
1185   \par%
1186   \unskip\vspace{\smallskipamount}%
1187   \end{minipage}%
1188   \par%
1189 }%
1190
1191 \BeforeBeginEnvironment{keywrap}{%
1192   \setlength{\KFLT@keywrapparskip}{\parskip}%
1193   \setlength{\KFLT@keywrapparindent}{\parindent}%
1194 }
```

Change History and Index

Change History

v0.10	
General: 2016/12/01 Initial ver.	1
v0.11	
\KFLT@addtext: Improved paragraph handling.	73
General: 2016/12/02	1
v0.12	
\keyfigbox: Group around contents.	85
\keyflt: Group around contents.	83
\keyparbox: Group around contents.	86
General: 2016/12/09	1
Adapts to older version of tocdata.	54
Added mo key.	56
Added wp key.	57
Docs: Improved index.	1
Docs: Loading keyfloat.	1
Docs: Margin float examples.	34
Docs: Wrapped float examples.	36
marginfigure: Added.	98
margintable: Added.	98
\KFLT@boxouter: [M] and [W] floats.	77
v0.13	
\KFLT@subfloats: Fix: Subfloat type selection.	92
General: 2017/01/18	1
\KFLTimageboxwidth: Added.	76
Docs: Other Settings.	1
Fix: Expands names in references.	49
v0.14	
\KFLT@docaption: Fix: No index entry if no artist given.	68
General: 2017/02/09	1
v0.15	
\KFLT@subfloats: Adjustments for keywrap.	92
General: 2017/05/12	1
Added vertical alignment key va.	58
keyfloats: Adjustments for keywrap.	88
keywrap: Added.	99
	KFLT@boxouter: Adjustments for keywrap.
	Handle vertical alignment key va.
v1.00	
General: 2019/01/11	1
Docs PDF bookmark improvements.	1
Removed xifthen dependency.	48
Removed spurious spaces.	1
Source formatting improvements.	1
v2.00	
\KFLT@@docaption: Factored.	67
\KFLT@ignorespaces: Added.	82
\KFLT@caption: Generalized for float type.	70
\KFLT@docaption: Added support for authors.	69
\KFLT@envignorespaces: Added.	82
\KFLT@ignorespaces: Added.	82
\KFLT@keyfloatend: Factored.	84
\KFLT@keyfloatstart: Factored.	84
\KFLT@keyflt: Added.	82
\KFLT@onefigureimage: Filename in arg instead of \KFLT@i.	65
\KFLT@prohibitpackage: Improved package conflict detection.	48
\endkeyflt: Added.	83
\keyfig: Factored.	85
\keyflt: Added.	83
\keytab: Factored.	86
General: 2019/03/21	1
Added custom float types.	1
Added float authors.	1
Adjustments for tocdata v2.00.	54
keyfloat: Added.	84
\KFLT@boxouter: Added custom float types.	79, 81

v2.01	\KFLT@endsubfloats: Added keysubfloats [M]. 95 Added keysubfloats [W]. 95 Fix: Positions with KOMASCRIFT. 95 Improved vertical space. 95	v2.02	\KFLT@addartisttext: Avoid underfull \hbox warning. 75 \hbox warning. 73
	\KFLT@subfloats: Added keysubfloats [M]. 94 Added keysubfloats [W]. 93 Fix: Font and color. 93 Fix: Positions with KOMASCRIFT. 94 Improved vertical space. 93		\KFLT@findwidths: Added ww and wlw. 63
	General: 2019/09/23 1		\KFLT@keyflt: Work with float. 82
	tablehere: Fix: Font and color. 50 Improved vertical space. 50		\KFLT@subfloats: Avoid underfull \hbox warning. 93
	keyfloats: Added keyfloats [M]. 89, 91 Added keyfloats [W]. 89, 91 Fix: Font and color. 89 Improved vertical space. 89, 91		General: 2021/05/27 1 Added ww and wlw. 57, 62 Work with float. 48
	keywrap: Fix: \noindent. 99 Fix: Font and color. 99	keyfloats: Avoid underfull \hbox warning. 89	keyfloats: Avoid underfull \hbox warning. 99
	KFLT@boxouter: Fix: Font and color. 79 Fix: Positions with KOMASCRIFT. 80 Improved vertical space. 79, 81	v2.03	KFLT@boxouter: Added ww and wlw. 78, 79 Avoid underfull \hbox warning. 78
	KFLT@marginfloat: Fix: Font and color. 97		General: 2021/05/28 1 Fixed \hbadness w/ \relax. 1
	figurehere: Fix: Font and color. 50 Improved vertical space. 50	v2.04	General: 2021/06/08 1 Added wn key. 56 Added wo key. 57 Patch wrapfig. 49
			KFLT@boxouter: Added wn and wo. 78

Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; numbers in roman refer to the code lines where the entry is used.
