# The l3benchmark package Experimental benchmarking

The LaTeX3 Project\*
Released 2018-11-19

### 1 Additions to 13sys: elapsed time

\sys\_gzero\_timer:

\sys\_gzero\_timer:

Resets the timer to zero.

\sys\_timer: \*

\sys\_timer:

Expands to the current value of the engine's timer clock, a non-negative integer. In engines without clock support this expands to 0.

### 2 Benchmark

#### \g\_benchmark\_duration\_target\_fp

This variable (default value: 1) controls roughly for how long \benchmark:n will repeat code to more accurately benchmark it. The actual duration of one call to \benchmark:n typically lasts between half and twice \g\_benchmark\_duration\_target\_fp seconds, unless of course running the code only once already lasts longer than this.

#### \benchmark\_once:n

 $\mbox{benchmark\_once:n } \{\langle code \rangle\}$ 

Prints to the terminal the time taken by  $T_EX$  to run the  $\langle code \rangle$ , and an estimated number of elementary operations. The  $\langle code \rangle$  is run only once so the time may be quite inaccurate for fast code.

#### \benchmark:n

\benchmark:n  $\{\langle code \rangle\}$ 

Prints to the terminal the time taken by  $T_EX$  to run the  $\langle code \rangle$ , and an estimated number of elementary operations. The  $\langle code \rangle$  may be run many times and not within a group, thus code with side-effects may cause problems.

<sup>\*</sup>E-mail: latex-team@latex-project.org

\benchmark\_tic:
\benchmark\_toc:

 $\verb|\benchmark_tic: \langle slow \ code \rangle \ \verb|\benchmark_toc:|$ 

When it is not possible to run \benchmark:n (e.g., the code is part of the execution of a package which cannot be looped) the tic/toc commands can be used instead to time between two points in the code. When executed, \benchmark\_tic: will print a line to the terminal, and \benchmark\_toc: will print a matching line with a time to indicate the duration between them in seconds. These commands can be nested.

## Index

The italic numbers denote the pages where the corresponding entry is described, numbers underlined point to the definition, all others indicate the places where it is used.
