

The `latexcolors` package*

Tobias Plüss

2019/01/04

Abstract

Built on top of the `xcolor` package, the `latexcolors` package defines the set of colors shown on latexcolor.com, for use in documents typeset with L^AT_EX & friends.

Contents

1	Package dependencies	1
2	List of defined colors	1
3	Acknowledgements	7
4	Implementation	7

Change History

v0.1

General: Submission to CTAN . . . 1

1 Package dependencies

The `latexcolors` package depends on the `xcolor` package. It automatically loads `xcolor` without any options.

2 List of defined colors

The list below shows all the colors defined by `latexcolors` with their names. To use one of the colors, simply use `\color{<name>}` where `<name>` is one of the color names listed below.

*This document corresponds to `latexcolors` v0.1, dated 2019/01/04.
