\immediate Im Folgenden definieren wir die TeX primitives \immediate, \write, \openout und \closeout
\write um. Alle nicht "immediate" ausgeführten Anweisungen werden dem Makro \@@@pending@outs
\openout (Kommaliste) hinzugefügt. So können speziell die \write-Anweisungen unabhängig von TeX's
\closeout \shipout zu einem günstigen Zeitpunkt ausgeführt werden. For VTEX we must keep in mind
that \immediate\special exist.

@@@exec@outs With the call of \@@@exec@outs we simulate TeX's execution of non-immediate output com-
mands. The number of pending commands which can be executed must be decremented by
\value{@@total@outs} - \botmarks\@@@out@mark. The remaining commands must still wait
until the next output page is ready. It works only for output commands in the main text which
moved to the next page but not for floating output commands.

2.4 Changing the page dimensions

`\setmargins` User command to specify the margins. (o, u, l, r)
`\setmargins{<top>}{<bottom>}{<left>}{<right>}`

The new user interface! By default, the leaflet class does not use headings, footings and marginal notes. If the user desires, these can be restored by setting the respective lengths *before* calling `\setmargins`. Setting the margins should *always* be done using `\setmargins`; if the user assigns to any of the length registers `\topmargin`, `\evensidemargin`, `\oddsidemargin` using `\setlength`, chaos will happen.

selects the page number. The star version adds the picture commands to the background of
one of the combined large pages instead of one of the small pages.

2.6 Page construction and output

2.6.1 Intercepting the small pages

`\vb@xt@` Similar to `\hb@xt@` (should be part of the L^AT_EX kernel).

```
410 \providecommand*\vb@xt@{\vbox to}
```

We use our own page saving macro instead of real L^AT_EX output.

```
411 \AtBeginDocument{\EveryShipout{\LL@savePage}}
```

`LL@page` A counter for the small pages (absolute counting).

```
412 \newcounter{LL@page}\setcounter{LL@page}{1}
```

```
413 \newcommand\LL@tempa{}
```

`\LL@savePage` With “combine” option the six small pages will be saved in box registers (`\LL@boxI...``\LL@boxVI`). The `box255` with the page content must be a bit moved to get a “normal-sized” box.
