

Parallel typesetting for critical editions: the **ledpar** package*

Peter Wilson
Herries Press[†]
Maïeul Rouquette[‡]

Abstract

The **ledmac** package, which is based on the PLAIN TeX set of **EDMAC** macros, has been used for some time for typesetting critical editions. The **ledpar** package is an extension to **ledmac** which enables texts and their critical apparatus to be typeset in parallel, either in two columns or on pairs of facing pages.

Please, for all bug's report, open a ticket on <https://github.com/maieul/ledmac/issues/>

1 Introduction

The **EDMAC** macros [LW90] for typesetting critical editions of texts have been available for use with TeX for some years. Since **EDMAC** became available there had been a small but constant demand for a version of **EDMAC** that could be used with LaTeX. The **ledmac** package was introduced in 2003 in an attempt to satisfy that request.

Some critical editions contain texts in more than one form, such as a set of verses in one language and their translations in another. In such cases there is a desire to be able to typeset the two texts, together with any critical apparatus, in parallel. The **ledpar** package is an extension to **ledmac** that enables two texts and their apparatus to be set in parallel, either in two columns or on pairs of facing pages.

The package has to try and coerce TeX into paths it was not designed for. Use of the package, therefore, may produce some surprising results.

This manual contains a general description of how to use **ledpar** starting in section 2; the complete source code for the package, with extensive documentation (in sections 8 through 25); and an Index to the source code. As **ledpar** is an adjunct to **ledmac** I assume that you have read the **ledmac** manual. Also **ledpar** requires **ledmac** to be used, preferably at least version 0.10 (2011/08/22). You do not need to read the source code for this package in order to use it but doing so may help to answer any questions you might have. On a first reading, I suggest that you should skip anything after the general documentation in sections 2 until 8, unless you are particularly interested in the innards of **ledpar**.

2 The **ledpar** package

A file may mix *numbered* and *unnumbered* text. Numbered text is printed with marginal line numbers and can include footnotes and endnotes that are referenced to those line numbers: this is how you'll want to print the text that you're editing. Unnumbered text is not printed with line numbers, and you can't use *ledmac*'s note commands with it: this is appropriate for introductions and other material added by the editor around the edited text.

The *ledpar* package lets you typeset two *numbered* texts in parallel. This can be done either as setting the ‘Leftside’ and ‘Rightside’ texts in two columns or on facing pages. In the paired pages case footnotes are placed at the bottom of the page on which they are called out — that is, footnotes belonging to the left are set at the foot of a left (even numbered) page, and those for right texts are at the bottom of the relevant right (odd numbered) page. However, in the columnar case, all footnotes are set at the bottom left of the page on which they are called out — they are not set below the relevant column. The line numbering schemes need not be the same for the two texts.

2.1 General

ledmac essentially puts each chunk of numbered text (the text within a `\pstart ... \pend`) into a box and then following the `\pend` extracts the text line by line from the box to number and print it. More precisely, the text is first put into the box as though it was being typeset as normal onto a page and any notes are stored without being typeset. Then each typeset line is extracted from the box and any notes for that line are recalled. The line, with any notes, is then output for printing, possibly with a line number attached. Effectively, all the text is typeset and then afterwards all the notes are typeset.

ledpar similarly puts the left and right chunks into boxes but can't immediately output the text after a `\pend` — it has to wait until after both the left and right texts have been collected before it can start processing. This means that several boxes are required and possibly TeX has to store a lot of text in its memory; both the number of potential boxes and memory are limited. If TeX's memory is overfilled the recourse is to reduce the amount of text stored before printing.

`\maxchunks`

It is possible to have multiple chunks in the left and right texts before printing them. The macro `\maxchunks{\langle num\rangle}` specifies the maximum number of chunks within the left or right texts. This is initially set as:

`\maxchunks{10}`

meaning that there can be up to 10 chunks in the left text and up to 10 chunks in the right text, requiring a total of 20 boxes. If you need more chunks then you can increase `\maxchunks`.

TeX has a limited number of boxes; if you get an error message along the lines of ‘no room for a new box’, then decrease the number. A chunk also requires a counter so you may get a message along the lines ‘no room for a new count’, which may be resolved by reducing `\maxchunks`.

On the other hand, if you get a *ledmac* error message along the lines: ‘Too

many `\pstart` without printing. Some text will be lost.' then you will have to either increase `\maxchunks` or use the parallel printing commands (`\Columns` or `\Pages`) more frequently.

When typesetting verse using `\syntax`, each line is treated as a chunk, so be warned that if you are setting parallel verses you might have to increase `\maxchunks` much more than it appears at first sight.

In general, `ledmac` is a TeX resource hog, and `ledpar` only makes things worse in this respect.

3 Parallel columns

`pairs` Numbered text that is to be set in columns must be within a `pairs` environment. Within the environment the text for the lefthand and righthand columns is placed within the `Leftside` and `Rightside` environments, respectively; these are described in more detail below in section 5.

`\Columns` The command `\Columns` typesets the texts in the previous pair of `Leftside` and `Rightside` environments. The general scheme for parallel columns looks like this:

```
\begin{pairs}
\begin{Leftside} ... \end{Leftside}
\begin{Rightside} ... \end{Rightside}
\Columns
\begin{Leftside} ... \end{Leftside}
...
\Columns
\end{pairs}
```

There is no required pagebreak before or after the columns.

The lengths `\Lcolwidth` and `\Rcolwidth` are the widths of the left and right columns, respectively. By default, these are:

```
\setlength{\Lcolwidth}{0.45\textwidth}
\setlength{\Rcolwidth}{0.45\textwidth}
```

They may be adjusted if one text tends to be 'bulkier' than the other.

The macro `\columnseparator` is called between each left/right pair of lines. By default it inserts a vertical rule of width `\columnrulewidth`. As this is initially defined to be 0pt the rule is invisible. For a visible rule between the columns you could try:

```
\setlength{\columnrulewidth}{0.4pt}
```

You can also modify `\columnseparator` if you want more control.

4 Facing pages

`pages` Numbered text that is to be set on facing pages must be within a `pages` environment.

ment. Within the environment the text for the lefthand and righthand pages is placed within the **Leftside** and **Rightside** environments, respectively.

\Pages

The command \Pages typesets the texts in the previous pair of **Leftside** and **Rightside** environments. The general scheme for parallel pages looks like this:

```
\begin{pages}
\begin{Leftside} ... \end{Leftside}
\begin{Rightside} ... \end{Rightside}
\Pages
\begin{Leftside} ... \end{Leftside}
...
\Pages
\end{pages}
```

The **Leftside** text is set on lefthand (even numbered) pages and the **Rightside** text is set on righthand (odd numbered) pages. Each \Pages command starts a new even numbered page. After parallel typesetting is finished, a new page is started.

\Lcolwidth
\Rcolwidth

Within the **pages** environment the lengths \Lcolwidth and \Rcolwidth are the widths of the left and right pages, respectively. By default, these are set to the normal textwidth for the document, but can be changed within the environment if necessary.

\goalfraction

When doing parallel pages ledpar has to guess where TeX is going to put pagebreaks and hopefully get there first in order to put the pair of texts on their proper pages. When it thinks that the fraction \goalfraction of a page has been filled, it finishes that page and starts on the other side's text. The definition is:

```
\newcommand*{\goalfraction}{0.9}
```

If you think you can get more on a page, increase this. On the other hand, if some left text overflows onto an odd numbered page or some right text onto an even page, try reducing it, for instance by:

```
\renewcommand*{\goalfraction}{0.8}
```

5 Left and right texts

Parallel texts are divided into **Leftside** and **Rightside**. The form of the contents of these two are independent of whether they will be set in columns or pages.

Leftside
Rightside

The left text is put within the **Leftside** environment and the right text likewise in the **Rightside** environment. The number of **Leftside** and **Rightside** environments must be the same.

\firstlinenum
\linenumincrement
\firstsublinenum
\sublinenumincrement

Within these environments you can designate the line numbering scheme(s) to be used. The ledmac package originally used counters for specifying the numbering scheme; now both ledmac¹ and the ledpar package use macros instead. Following \firstlinenum{\<num>} the first line number will be <num>, and following \linenumincrement{\<num>} only every <num>th line will have a printed

¹when used with ledpatch v0.2 or greater.

number. Using these macros inside the `Leftside` and `Rightside` environments gives you independent control over the left and right numbering schemes. The `\firstsublinenum` and `\sublinenumincrement` macros correspondingly set the numbering scheme for sublines.

`\pstart`
`\pend`

In a serial (non-parallel) mode, each numbered paragraph, or chunk, is contained between the `\pstart` and `\pend` macros, and the paragraph is output when the `\pend` macro occurs. The situation is somewhat different with parallel typesetting as the left text (contained within `\pstart` and `\pend` groups within the `Leftside` environment) has to be set in parallel with the right text (contained within its own `\pstart` and `\pend` groups within the corresponding `Rightside` environment) the `\pend` macros cannot immediately initiate any typesetting — this has to be controlled by the `\Columns` or `\Pages` macros. Several chunks may be specified within a `Leftside` or `Rightside` environment. A multi-chunk text then looks like:

```
\begin{...side}
% \beginnumbering
\pstart first chunk \pend
\pstart second chunk \pend
...
\pstart last chunk \pend
% \endnumbering
\end{...side}
```

Numbering, via `\beginnumbering` and `\endnumbering`, may extend across several `Leftside` or `Rightside` environments. Remember, though, that the Left/Right sides are effectively independent of each other.

Generally speaking, controls like `\firstlinenum` or `\linenummargin` apply to sequential and left texts. To effect right texts only they have to be within a `Rightside` environment.

If you are using the `babel` package with different languages (via, say, `\selectlanguage`) for the left and right texts it is particularly important to select the appropriate language within the `Leftside` and `Rightside` environments. The initial language selected for the right text is the `babel` package's default. Also, it is the *last* `\selectlanguage` in a side that controls the language used in any notes for that side when they get printed. If you are using multilingual notes then it is probably safest to explicitly specify the language(s) for each note rather than relying on the language selection for the side. The right side language is also applied to the right side line numbers.

Corresponding left and right sides must have the same number of paragraph chunks — if there are four on the left there must be four on the right, even if some are empty. The start of each pair of left and right chunks are aligned horizontally on the page. The ends may come at different positions — if one chunk is shorter than the other then blank lines are output on the shorter side until the end of the longer chunk is reached.

6 Numbering text lines

`\beginnumbering` Each section of numbered text must be preceded by `\beginnumbering` and followed by `\endnumbering`, like:

```
\beginnumbering
<text>
\endnumbering
```

These have to be separately specified within `Leftside` and `Rightside` environments.

The `\beginnumbering` macro resets the line number to zero, reads an auxiliary file called `<jobname>.nn` (where `<jobname>` is the name of the main input file for this job, and `nn` is 1 for the first numbered section, 2 for the second section, and so on), and then creates a new version of this auxiliary file to collect information during this run. Separate auxiliary files are maintained for right hand texts and these are named `<jobname>.nnR`, using the ‘R’ to distinguish them from the left hand and serial (non-parallel) texts.

`\memorydump` The command `\memorydump` effectively performs an `\endnumbering` immediately followed by a `\beginnumbering` while not restarting the numbering sequence. This has the effect of clearing TeX’s memory of previous texts and any associated notes, allowing longer apparent streams of parallel texts. The command should be applied to both left and right texts, and after making sure that all previous notes have been output. For example, along the lines of:

```
\begin{Leftside}
\beginnumbering
...
\end{Leftside}
\begin{Rightside}
\beginnumbering
...
\end{Rightside}
\Pages
\begin{Leftside}
\memorydump
...
\end{Leftside}
\begin{Rightside}
\memorydump
...
\end{Rightside}
```

`\Rlineflag` The value of `\Rlineflag` is appended to the line numbers of the right texts. Its default definition is:

```
\newcommand*{\Rlineflag}{R}
```

This may be useful for parallel columns but for parallel pages it might be more appropriate to redefine it as:

```
\renewcommand*{\Rlineflag}{}.
```

`\printlinesR` The `\printlines` macro is ordinarily used to print the line number refer-

```
\ledsavedprintlines
```

ences for critical footnotes. For footnotes from right side texts a special version is supplied, called `\printlinesR`, which incorporates `\Rlineflag`. (The macro `\ledsavedprintlines` is a copy of the original `\printlines`, just in case ...). As provided, the package makes no use of `\printlinesR` but you may find it useful. For example, if you only use the B footnote series in righthand texts then you may wish to flag any line numbers in those footnotes with the value of `\Rlineflag`. You could do this by putting the following code in your preamble:

```
\let\oldBfootfmt\Bfootfmt
\renewcommand{\Bfootfmt}[3]{%
  \let\printlines\printlinesR
  \oldBfootfmt{#1}{#2}{#3}}
```

7 Verse

If you are typesetting verse with `ledmac` you can use the `\stanza` construct, and you can also use this in right or left parallel texts. In this case each verse line is a chunk which has two implications. (1) you can unexpectedly exceed the `\maxchunks` limit or the overall limit on the number of boxes, and (2) left and right verse lines are matched, which may not be desirable if one side requires more print lines for verse lines than the other does.

`\astanza` `ledpar` provides an `\astanza` environment which you can use instead of `\stanza` (simply replace `\stanza` by `\begin{astanza}` and add `\end{astanza}` after the ending `\&`). Within the `\astanza` environment each verse line is treated as a paragraph, so there must be no blank lines in the environment otherwise there will be some extraneous vertical spacing.

If you get an error message along the lines of ‘Missing number, treated as zero `\sza@00`’ it is because you have forgotten to use `\setstanzaindent`s to set the stanza indents.

`\skipnumbering` The command `\skipnumbering` when inserted in a line of parallel text causes the numbering of that particular line to be skipped. This can be useful if you are putting some kind of marker (even if it is only a blank line) between stanzas. Remember, parallel texts must be numbered and this provides a way to slip in an ‘unnumbered’ line.

The `\astanza` environment forms a chunk but you may want to have more than one stanza within the chunk. Here are a couple of ways of doing that with a blank line between each internal stanza, and with each stanza numbered. First some preliminary definitions:

```
\newcommand*{\stanzanum}[2][\stanzaindentbase]{%
  \hskip -#1\llap{\textbf{#2}}\hskip #1\ignorespaces}
\newcommand{\interstanza}{\par\mbox{}\skipnumbering}
```

And now for two stanzas in one. In this first example the line numbering repeats for each stanza.

```
\setstanzaindent{1,0,1,0,1,0,1,0,1,0,1}
\begin{pairs}
\begin{Leftside}
\firstlinenum{2}
\linenumincrement{1}
\beginnenumerating
\begin{astanza}
\stanza{1} First in first stanza &
Second in first stanza &
Second in first stanza &
Third in first stanza &
Fourth in first stanza &
\interstanza
\setline{2}\stanza{2} First in second stanza &
Second in second stanza &
Second in second stanza &
Third in second stanza &
Fourth in second stanza \&
\end{astanza}
...

```

And here is a slightly different way of doing the same thing, but with the line numbering being continuous.

```
\setstanzaindent{1,0,1,0,1,0,0,1,0,1,0,1}
\begin{pairs}
\begin{Leftside}
\firstlinenum{2}
\linenumincrement{1}
\beginnenumerating
\begin{astanza}
\stanza{1} First in first stanza &
Second in first stanza &
Second in first stanza &
Third in first stanza &
Fourth in first stanza &
\strut &
\stanza{2}\advanceline{-1} First in second stanza &
Second in second stanza &
Second in second stanza &
Third in second stanza &
Fourth in second stanza \&
\end{astanza}
...

```

8 Implementation overview

TeX is designed to process a single stream of text, which may include footnotes, tables, and so on. It just keeps converting its input into a stream typeset pages. It was not designed for typesetting two texts in parallel, where it has to alternate from one to the other. Further, TeX essentially processes its input one paragraph at a time — it is very difficult to get at the ‘internals’ of a paragraph such as the individual lines in case you want to number them or put some mark at the start or end of the lines.

`ledmac` solves the problem of line numbering by putting the paragraph in typeset form into a box, and then extracting the lines one by one from the box for TeX to put them onto the page with the appropriate page breaks. Most of the `ledmac` code is concerned with handling this box and its contents.

`ledpar`’s solution to the problem of parallel texts is to put the two texts into separate boxes, and then appropriately extract the pairs of lines from the boxes. This involves duplicating much of the original box code for an extra right text box. The other, smaller, part of the code is concerned with coordinating the line extractions from the boxes.

The package code is presented in roughly in the same order as in `ledmac`.

9 Preliminaries

Announce the name and version of the package, which is targetted for LaTeX2e. The package also requires the `ledmac` package, preferably at least version 0.10 (2011/08/22).

```
1 {*code}
2 \NeedsTeXFormat{LaTeX2e}
3 \ProvidesPackage{ledpar}[2011/08/31 v0.7 ledmac extension for parallel texts]
4
```

With the option ‘shiftedverses’ a long verse one the left side (or in the right side) don’t make a blank on the corresponding verse, but the blank is put on the bottom of the page. Consequently, the verses on the parallel pages are shifted, but the shifted stop at every end of pages.

```
5 \newif\ifshiftedverses
6 \shiftedversesfalse
7 \DeclareOption{shiftedverses}{\shiftedversestrue}
8 \ProcessOptions
```

As noted above, much of the code is a duplication of the original `ledmac` code to handle the extra box(es) for the right hand side text, and sometimes for the left hand side as well. In order to distinguish I use ‘R’ or ‘L’ in the names of macros for the right and left code. The specifics of ‘L’ and ‘R’ are normally hidden from the user by letting the `Leftside` and `Rightside` environments set things up appropriately.

```

\ifl@dpairing \ifl@dpairing is set TRUE if we are processing parallel texts and \ifl@dpaging
\ifl@dpaging is also set TRUE if we are doing parallel pages. \ifledRcol is set TRUE if we
\ifledRcol are doing the right hand text. \ifl@dpairing is defined in ledmac.

 9  \l@dpairingfalse
10 \newif\ifl@dpaging
11  \l@dpagingfalse
12 \newif\ifledRcol
13  \ledRcolfalse

\Lcolwidth The widths of the left and right parallel columns (or pages).
\Rcolwidth 14 \newdimen\Lcolwidth
15  \Lcolwidth=0.45\textwidth
16 \newdimen\Rcolwidth
17  \Rcolwidth=0.45\textwidth
18

```

9.1 Messages

All the error and warning messages are collected here as macros.

```

\led@err@TooManyPstarts
19 \newcommand*{\led@err@TooManyPstarts}{%
20  \ledmac@error{Too many \string\pstart\space without printing.
21          Some text will be lost}{\@ehc}}
22
\led@err@BadLeftRightPstarts
22 \newcommand*{\led@err@BadLeftRightPstarts}[2]{%
23  \ledmac@error{The numbers of left (#1) and right (#2)
24          \string\pstart s do not match}{\@ehc}}
25
\led@err@LeftOnRightPage
\led@err@RightOnLeftPage 25 \newcommand*{\led@err@LeftOnRightPage}{%
26  \ledmac@error{The left page has ended on a right page}{\@ehc}}
27 \newcommand*{\led@err@RightOnLeftPage}{%
28  \ledmac@error{The right page has ended on a left page}{\@ehc}}

```

10 Sectioning commands

```

\section@numR This is the right side equivalent of \section@num.
Each section will read and write an associated ‘line-list file’, containing information used to do the numbering. Normally the file will be called <jobname>.nn, where nn is the section number. However, for right side texts the file is called <jobname>.nnR. The \extensionchars applies to the right side files just as it does to the normal files.

29 \newcount\section@numR
30  \section@numR=\z@

```

```

\ifnumberingR The \ifnumberingR flag is set to true if we're within a right text numbered
section.

31 \newif\ifnumberingR

\ifpst@rtedL \ifpst@rtedL is set FALSE at the start of left side numbering, and similarly for
\ifpst@rtedR \ifpst@rtedR. \ifpst@rtedL is defined in ledmac.

32 \pst@rtedLfalse
33 \newif\ifpst@rtedR
34 \pst@rtedRfalse
35

\beginnumbering For parallel processing the original \beginnumbering is extended to zero \l@dnumpstartsL
— the number of chunks to be processed. It also sets \ifpst@rtedL to FALSE.

36 \providecommand*\beginnumbering}{%
37   \ifnumbering
38     \led@err@NumberingStarted
39   \endnumbering
40   \fi
41   \global\l@dnumpstartsL \z@%
42   \global\pst@rtedLfalse
43   \global\numberingtrue
44   \global\advance\section@num \@ne
45   \initnumbering@reg
46   \message{Section \the\section@num}%
47   \line@list@stuff{\jobname.\extensionchars\the\section@num}%
48   \l@dend@stuff}

\beginnumberingR This is the right text equivalent of \beginnumbering, and begins a section of
numbered text.

49 \newcommand*\beginnumberingR}{%
50   \ifnumberingR
51     \led@err@NumberingStarted
52   \endnumberingR
53   \fi
54   \global\l@dnumpstartsR \z@%
55   \global\pst@rtedRfalse
56   \global\numberingRtrue
57   \global\advance\section@numR \@ne
58   \global\absline@numR \z@%
59   \global\line@numR \z@%
60   \global\@clockR \z@%
61   \global\sub@clockR \z@%
62   \global\sublines@false
63   \global\let\next@page@numR\relax
64   \global\let\sub@change\relax
65   \message{Section \the\section@numR R }%
66   \line@list@stuffR{\jobname.\extensionchars\the\section@numR R}%
67   \l@dend@stuff}
68

```

`\endnumbering` This is the left text version of the regular `\endnumbering` and must follow the last text for a left text numbered section. It sets `\ifpst@rtedL` to FALSE. It is fully defined in `ledmac`.

`\endnumberingR` This is the right text equivalent of `\endnumbering` and must follow the last text for a right text numbered section.

```

69 \def\endnumberingR{%
70   \ifnumberingR
71     \global\numberingRfalse

11 Line counting

11.1 Choosing the system of lineation

Sometimes you want line numbers that start at 1 at the top of each page; other times you want line numbers that start at 1 at the start of each section and increase regardless of page breaks. `ledpar` lets you choose different schemes for the left and right texts.

`\ifbypage@R` The `\ifbypage@R` flag specifies the current lineation system for right texts: `false` for line-of-section, `true` for line-of-page. `ledpar` will use the line-of-section system unless instructed otherwise.

```

122 \newif\ifbypage@R
123   \bypage@Rfalse

```

`\lineationR` `\lineationR{<word>}` is the macro used to select the lineation system for right texts. Its argument is a string: either `page` or `section`.

```

124 \newcommand*{\lineationR}[1]{{%
125   \ifnumberingR
126     \led@err@LineationInNumbered
127   \else
128     \def\@tempa{\#1}\def\@tempb{page}%
129     \ifx\@tempa\@tempb
130       \global\bypage@Rtrue
131     \else
132       \def\@tempb{section}%
133       \ifx\@tempa\@tempb
134         \global\bypage@Rfalse
135       \else
136         \led@warn@BadLineation
137       \fi

```

```

138      \fi
139  \fi}}
140

```

\linenummargin \line@marginR You call `\linenummargin{<word>}` to specify which margin you want your right text's line numbers in; it takes one argument, a string. You can put the line numbers in the same margin on every page using `left` or `right`; or you can use `inner` or `outer` to get them in the inner or outer margins. You can change this within a numbered section, but the change may not take effect just when you'd like; if it's done between paragraphs nothing surprising should happen.

For right texts the selection is recorded in the count `\line@marginR`, otherwise in the count `\line@margin`: 0 for left, 1 for right, 2 for outer, and 3 for inner.

```

141 \newcount\line@marginR
142 \renewcommand*{\linenummargin}[1]{%
143   \l@dge@margin{\#1}%
144   \ifnum\@l@tempcntb>\m@ne
145     \ifledRcol
146       \global\line@marginR=\@l@tempcntb
147     \else
148       \global\line@margin=\@l@tempcntb
149     \fi
150   \fi}%

```

By default put right text numbers at the right.

```

151 \line@marginR=\@ne
152

```

\c@firstlinenumR \c@linenumincrementR The following counters tell ledmac which right text lines should be printed with line numbers. `firstlinenum` is the number of the first line in each section that gets a number; `linenumincrement` is the difference between successive numbered lines. The initial values of these counters produce labels on lines 5, 10, 15, etc. `linenumincrement` must be at least 1.

```

153 \newcounter{firstlinenumR}
154   \setcounter{firstlinenumR}{5}
155 \newcounter{linenumincrementR}
156   \setcounter{linenumincrementR}{5}

```

\c@firstsublinenumR \c@sublinenumincrementR The following parameters are just like `firstlinenumR` and `linenumincrementR`, but for sub-line numbers. `sublinenumincrementR` must be at least 1.

```

157 \newcounter{firstsublinenumR}
158   \setcounter{firstsublinenumR}{5}
159 \newcounter{sublinenumincrementR}
160   \setcounter{sublinenumincrementR}{5}
161

```

\firstlinenum \linenumincrement \firstsublinenum \sublinenumincrement These are the user's macros for changing (sub) line numbers. They are defined in ledmac v0.7, but just in case I have started by `\provide`ing them.

```

162 \providecommand*{\firstlinenum}{}%

```

```

163 \providecommand*\linenumincrement(){}
164 \providecommand*\firstsublinenum(){}
165 \providecommand*\sublinenumincrement(){}
166 \renewcommand*\firstlinenum[1]{%
167   \ifledRcol \setcounter{firstlinenumR}{#1}%
168   \else      \setcounter{firstlinenum}{#1}%
169   \fi}
170 \renewcommand*\linenumincrement[1]{%
171   \ifledRcol \setcounter{linenumincrementR}{#1}%
172   \else      \setcounter{linenumincrement}{#1}%

179   \ifledRcol \setcounter{sublinenumincrementR}{#1}%
180   \else      \setcounter{sublinenumincrement}{#1}%
181   \fi}
182

```

\Rlineflag This is appended to the line numbers of right text.

```

183 \newcommand*\Rlineflag{R}
184

```

\linenumrepR **\linenumrepR**{*ctr*} typesets the right line number *ctr*, and similarly **\sublinenumrepR** for subline numbers.

```

185 \newcommand*\linenumrepR[1]{\@arabic{#1}}
186 \newcommand*\sublinenumrepR[1]{\@arabic{#1}}
187

```

\leftlinenumR **\leftlinenumR** and **\rightlinenumR** are the macros that are called to print the right text's marginal line numbers. Much of the code for these is common and is maintained in **\l@dlinenumR**.

```

188 \newcommand*\leftlinenumR{%
189   \l@dlinenumR
190   \kern\linenumsep}
191 \newcommand*\rightlinenumR{%
192   \kern\linenumsep
193   \l@dlinenumR}
194 \newcommand*\l@dlinenumR{%
195   \numlabfont\linenumrepR{\line@numR}\Rlineflag%
196   \ifsublines@
197     \ifnum\subline@num>\z@
198       \unskip\fullstop\sublinenumrepR{\subline@numR}%
199     \fi
200   \fi}
201

```

11.2 Line-number counters and lists

We need another set of counters and lists for the right text, corresponding to those in `ledmac` for regular or left text.

`\line@numR` The count `\line@numR` stores the line number that's used in the right text's marginal line numbering and in notes. The count `\subline@numR` stores a sub-line number that qualifies `\line@numR`. The count `\absline@numR` stores the absolute number of lines since the start of the right text section: that is, the number we've actually printed, no matter what numbers we attached to them.

```
202 \newcount\line@numR
203 \newcount\subline@numR
204 \newcount\absline@numR
205
```

`\line@listR` Now we can define the list macros that will be created from the line-list file. They are directly analogous to the left text ones. The full list of action codes and their meanings is given in the `ledmac` manual.

`\actions@listR` Here are the commands to create these lists:

```
206 \list@create{\line@listR}
207 \list@create{\insertlines@listR}
208 \list@create{\actionlines@listR}
209 \list@create{\actions@listR}
210
```

`\linesinpar@listL` In order to synchronise left and right chunks in parallel processing we need to know how many lines are in each left and right text chunk, and the maximum of these for each pair of chunks.

```
211 \list@create{\linesinpar@listL}
212 \list@create{\linesinpar@listR}
213 \list@create{\maxlinesinpar@list}
214
```

`\page@numR` The right text page number.

```
215 \newcount\page@numR
216
```

11.3 Reading the line-list file

`\read@linelist` `\read@linelist{<file>}` is the control sequence that's called by `\beginnumbering` (via `\line@list@stuff`) to open and process a line-list file; its argument is the name of the file.

```
217 \renewcommand*{\read@linelist}[1]{%
```

We do different things depending whether or not we are processing right text

```
218 \ifledRcol
219   \list@clear{\line@listR}%
220   \list@clear{\insertlines@listR}%
```

```

221   \list@clear{\actionlines@listR}%
222   \list@clear{\actions@listR}%
223   \list@clear{\linesinpar@listR}%
224   \list@clear{\linesonpage@listR}
225 \else
226   \list@clearing@reg
227   \list@clear{\linesinpar@listL}%
228   \list@clear{\linesonpage@listL}%
229 \fi

```

Make sure that the `\maxlinesinpar@list` is empty (otherwise things will be thrown out of kilter if there is any old stuff still hanging in there).

```
230 \list@clear{\maxlinesinpar@list}
```

Now get the file and interpret it.

```

231 \get@linelistfile{#1}%
232 \endgroup

```

When the reading is done, we're all through with the line-list file. All the information we needed from it will now be encoded in our list macros. Finally, we initialize the `\next@actionline` and `\next@action` macros, which specify where and what the next action to be taken is.

```

233 \ifledRcol
234   \global\page@numR=\m@ne
235   \ifx\actionlines@listR\empty
236     \gdef\next@actionlineR{1000000}%
237   \else
238     \gl@p\actionlines@listR\to\next@actionlineR
239     \gl@p\actions@listR\to\next@actionR
240   \fi
241 \else
242   \global\page@num=\m@ne
243   \ifx\actionlines@list\empty
244     \gdef\next@actionline{1000000}%
245   \else
246     \gl@p\actionlines@list\to\next@actionline
247     \gl@p\actions@list\to\next@action
248   \fi
249 \fi}
250

```

This version of `\read@linelist` creates list macros containing data for the entire section, so they could get rather large. The `\memorydump` macro is available if you run into macro memory limitations.

11.4 Commands within the line-list file

This section defines the commands that can appear within a line-list file, except for `\@lab` which is in a later section among the cross-referencing commands it is associated with.

The macros with `action` in their names contain all the code that modifies the action-code list.

`\@l@regR` `\@l` does everything related to the start of a new line of numbered text. Exactly what it does depends on whether right text is being processed.

```

251 \newcommand{\@l@regR}{%
252   \ifx\l@dchset@num\relax \else
253     \advance\absline@numR \cne

```

\n@num This macro implements the \skipnumbering command. It uses a new action code, namely 1007.

```

498 \providecommand*\n@num{}%
499 \renewcommand*\n@num{%
500   \ifledRcol
501     \xright@appenditem{\the\absline@numR}\to\actionlines@listR
502     \xright@appenditem{-1007}\to\actions@listR
503   \else
504     \n@num@reg
505   \fi}
506

```

\@ref \@ref marks the start of a passage, for creation of a footnote reference. It takes \insert@countR two arguments:

- #1, the number of entries to add to \insertlines@list for this reference. This value for right text, here and within \edtext, which computes it and

writes it to the line-list file, will be stored in the count `\insert@countR`.

```
507      \newcount\insert@countR
```

- #2, a sequence of other line-list-file commands, executed to determine the ending line-number. (This may also include other `\@ref` commands, corresponding to uses of `\edtext` within the first argument of another instance of `\edtext`.)

The first thing `\@ref` itself does is to add the specified number of items to the `\insertlines@list` list.

```
508 \renewcommand*{\@ref}[2]{%
509   \ifledRcol
510     \global\insert@countR=#1\relax
511     \loop\ifnum\insert@countR>\z@
512       \xright@appenditem{\the\absline@numR}\to\insertlines@listR
513     \global\advance\insert@countR \m@ne
514   \repeat
```

Next, process the second argument to determine the page and line numbers for the end of this lemma. We temporarily equate `\@ref` to a different macro that just executes its argument, so that nested `\@ref` commands are just skipped this time. Some other macros need to be temporarily redefined to suppress their action.

```
515  \begingroup
516  \let\@ref=\dummy@ref
517  \let\page@action=\relax
518  \let\sub@action=\relax
519  \let\set@line@action=\relax
520  \let\@lab=\relax
521  #2
522  \global\endpage@num=\page@numR
523  \global\endline@num=\line@numR
524  \global\endsubline@num=\subline@numR
525  \endgroup
```

Now store all the information about the location of the lemma's start and end in `\line@list`.

```
526  \xright@appenditem%
527  {\the\page@numR|\the\line@numR|%
528  \ifsublines@ \the\subline@numR \else 0\fi|%
529  \the\endpage@num|\the\endline@num|%
530  \ifsublines@ \the\endsubline@num \else 0\fi}\to\line@listR
```

Finally, execute the second argument of `\@ref` again, to perform for real all the commands within it.

```
531  #2
532  \else
```

And when not in right text

```
533  \@ref@reg{#1}{#2}%
534  \fi}
```

\@pend \@pend{\langle num\rangle} adds its argument to the \linesinpar@listL list, and analogously for \@pendR. We start off with a \providecommand just in case an older version of ledmac is being used which does not define these macros.

```
535 \providecommand*\{@pend}[1]{}
536 \renewcommand*\{@pend}[1]{%
537   \xright@appenditem{\#1}\to\linesinpar@listL}
538 \providecommand*\{@pendR}[1]{}
539 \renewcommand*\{@pendR}[1]{%
540   \xright@appenditem{\#1}\to\linesinpar@listR}
541
```

\@lopL \@lopL{\langle num\rangle} adds its argument to the \linesonpage@listL list, and analogously for \@lopR. We start off with a \providecommand just in case an older version of ledmac is being used which does not define these macros.

```
542 \providecommand*\{@lopL}[1]{}
543 \renewcommand*\{@lopL}[1]{%
544   \xright@appenditem{\#1}\to\linesonpage@listL}
545 \providecommand*\{@lopR}[1]{}
546 \renewcommand*\{@lopR}[1]{%
547   \xright@appenditem{\#1}\to\linesonpage@listR}
548
```

11.5 Writing to the line-list file

We've now defined all the counters, lists, and commands involved in reading the line-list file at the start of a section. Now we'll cover the commands that ledmac uses within the text of a section to write commands out to the line-list.

\linenum@outR The file for right texts will be opened on output stream \linenum@outR.

```
549 \newwrite\linenum@outR
```

\iffirst@linenum@out@R Once any file is opened on this stream, we keep it open forever, or else switch to another file that we keep open.

```
\first@linenum@out@Rfalse 550 \newif\iffirst@linenum@out@R
                           \first@linenum@out@Rtrue
```

\line@list@stuffR This is the right text version of the \line@list@stuff{\langle file\rangle} macro. It is called by \beginnumberingR and performs all the line-list operations needed at the start of a section. Its argument is the name of the line-list file.

```
552 \newcommand*\{@line@list@stuffR}[1]{%
553   \read@linelist{\#1}%
554   \iffirst@linenum@out@R
555     \immediate\closeout\linenum@outR
556     \global\first@linenum@out@Rfalse
557     \immediate\openout\linenum@outR=\#1
558   \else
559     \closeout\linenum@outR
560     \openout\linenum@outR=\#1
```

```

561   \fi}
562

\new@lineR The \new@lineR macro sends the \@l command to the right text line-list file, to
563 \newcommand*\new@lineR{%
564   \write\linenum@outR{\string\@l[\the\c@page] [\thepage]}}
565
\flag@start We enclose a lemma marked by \edtext in \flag@start and \flag@end: these
\flag@end send the \@ref command to the line-list file.
566 \renewcommand*\flag@start{%
567   \ifledRcol
568     \edef\next{\write\linenum@outR{%
569       \string\@ref[\the\insert@countR][]}%
570   \next
571 \else
572   \edef\next{\write\linenum@out{%
573     \string\@ref[\the\insert@count][]}%
574   \next
575 \fi}
576 \renewcommand*\flag@end{%
577   \ifledRcol
578     \write\linenum@outR[]%
579   \else
580     \write\linenum@out[]%
581   \fi}
582
\startsub \startsub and \endsub turn sub-lineation on and off, by writing appropriate
\endsub instructions to the line-list file.
583 \renewcommand*\startsub{\dimen0\lastskip
584 \ifdim\dimen0>0pt \unskip \fi
585 \ifledRcol \write\linenum@outR{\string\sub@on}%
586 \else \write\linenum@out{\string\sub@on}%
587 \fi
588 \ifdim\dimen0>0pt \hskip\dimen0 \fi}
589 \def\endsub{\dimen0\lastskip
590 \ifdim\dimen0>0pt \unskip \fi
591 \ifledRcol \write\linenum@outR{\string\sub@off}%
592 \else \write\linenum@out{\string\sub@off}%
593 \fi
594
\advanceline You can use \advanceline{(num)} in running text to advance the current visible
line-number by a specified value, positive or negative.
595 \renewcommand*\advanceline[1]{%
596 \ifledRcol \write\linenum@outR{\string\@adv[#1]}%
597 \else \write\linenum@out{\string\@adv[#1]}%
598 \fi}

```

\setline You can use `\setline{<num>}` in running text (i.e., within `\pstart...\\pend`) to set the current visible line-number to a specified positive value.

```
598 \renewcommand*{\setline}[1]{%
599   \ifnum#1<\z@
600     \led@warn@BadSetline
601   \else
602     \ifledRcol \write\linenum@outR{\string\@set[#1]}%
603     \else      \write\linenum@out{\string\@set[#1]}%
604     \fi
605   \fi}
```

\setlinenum You can use `\setlinenum{<num>}` before a `\pstart` to set the visible line-number to a specified positive value. It writes a `\l@d@set` command to the line-list file.

```
606 \renewcommand*{\setlinenum}[1]{%
607   \ifnum#1<\z@
608     \led@warn@BadSetlinenum
609   \else
610     \ifledRcol \write\linenum@outR{\string\l@d@set[#1]}%
611     \else      \write\linenum@out{\string\l@d@set[#1]} \fi
612   \fi
613 }
```

\startlock You can use `\startlock` or `\endlock` in running text to start or end line number

\endlock locking at the current line. They decide whether line numbers or sub-line numbers are affected, depending on the current state of the sub-lineation flags.

```
614 \renewcommand*{\startlock}{%
615   \ifledRcol \write\linenum@outR{\string\lock@on}%
616   \else      \write\linenum@out{\string\lock@on}%
617   \fi}
618 \def\endlock{%
619   \ifledRcol \write\linenum@outR{\string\lock@off}%
620   \else      \write\linenum@out{\string\lock@off}%
621   \fi}
622 }
```

\skipnumbering In numbered text, `\skipnumbering` in a line will suspend the numbering for that particular line. That is, line numbers are unchanged and no line number will be printed.

```
623 \renewcommand*{\skipnumbering}{%
624   \ifledRcol \write\linenum@outR{\string\n@num}%
625     \advanceline{-1}%
626   \else
627     \skipnumbering@reg
628   \fi}
629 }
```

12 Marking text for notes

The `\edtext` (or `\critext`) macro is used to create all footnotes and endnotes, as well as to print the portion of the main text to which a given note or notes is keyed. The idea is to have that lemma appear only once in the `.tex` file: all instances of it in the main text and in the notes are copied from that one appearance.

`\critext` requires two arguments. At any point within numbered text, you use it by saying:

```
\critext{#1}{#2}
```

Similarly `\edtext` requires the same two arguments but you use it by saying:

```
\edtext{#1}{#2}
```

`\critext` Now we begin `\critext` itself.

We slightly modify the original to make accomodation for when right text is being processed.

```
630 \long\def\critext#1#2{\leavevmode
631   \begingroup
632     \no@expands
633     \xdef\@tag{#1}%

681       \xdef\l@d@nums{\@tempb|\edfont@info}%
682       \global\let\@tempb=\undefined
683     \fi
684   \fi
685 }

```

13 Parallel environments

The initial set up for parallel processing is deceptively simple.

```

pairs The pairs environment is for parallel columns and the pages environment for
pages parallel pages.
chapterinpages 686 \newenvironment{pairs}{%
687   \l@dpairingtrue
688   \l@dpagingfalse
689 }{%
690   \l@dpairingfalse
691 }

```

The **pages** environment additionally sets the ‘column’ widths to the **\textwidth** (as known at the time the package is called). As in this environnement there is two text in parallels in 2 pages, chapter have not to start in a left page. So the **\chapter** command is redefined to make no test about clearing page.

```

692 \newenvironment{pages}{%
693   \let\oldchapter\chapter
694   \let\chapter\chapterinpages
695   \l@dpairingtrue
696   \l@dpagingtrue
697   \setlength{\Lcolwidth}{\textwidth}%
698   \setlength{\Rcolwidth}{\textwidth}%
699 }{%
700   \l@dpairingfalse
701   \l@dpagingfalse
702   \let\chapter\oldchapter
703 }
704 \newcommand{\chapterinpages}{\thispagestyle{plain}%
705   \global\@topnum\z@
706   \cafterindentfalse
707   \secdef\@chapter\@schapter}
708

```

Leftside Within the `pairs` and `pages` environments the left and right hand texts are within `Leftside` and `Rightside` environments, respectively. The `Leftside` environment is simple, indicating that right text is not within its purview and using some particular macros.

```

709 \newenvironment{Leftside}{%
710   \ledRcolfalse
711   \let\pstart\pstartL
712   \let\pend\pendL
713   \let\memorydump\memorydumpL
714   \Leftsidehook
715 }{\Leftsidehookend}

```

`\Leftsidehook` Hooks into the start and end of the `Leftside` and `Rightside` environments. These `\Leftsidehookend` are initially empty.

```

\Rightsidehook 716 \newcommand*{\Leftsidehook}{}%
\Rightsidehookend 717 \newcommand*{\Leftsidehookend}{}%
718 \newcommand*{\Rightsidehook}{}%
719 \newcommand*{\Rightsidehookend}{}%
720

```

Rightside The `Rightside` environment is only slightly more complicated than the `Leftside`. Apart from indicating that right text is being provided it ensures that the right right text code will be used.

```

721 \newenvironment{Rightside}{%
722   \ledRcoltrue
723   \let\beginnumbering\beginnumberingR
724   \let\endnumbering\endnumberingR
725   \let\pausenumbering\pausenumberingR
726   \let\resumenumbering\resumenumberingR
727   \let\memorydump\memorydumpR
728   \let\pstart\pstartR

```

```

729   \let\pend\pendR
730   \let\lineation\lineationR
731   \Rightsidehook
732 }{%
733   \ledRcolfalse
734   \Rightsidehookend
735 }
736

```

14 Paragraph decomposition and reassembly

In order to be able to count the lines of text and affix line numbers, we add an extra stage of processing for each paragraph. We send the paragraph into a box register, rather than straight onto the vertical list, and when the paragraph ends we slice the paragraph into its component lines; to each line we add any notes or line numbers, add a command to write to the line-list, and then at last send the line to the vertical list. This section contains all the code for this processing.

14.1 Boxes, counters, \pstart and \pend

\num@linesR Here are numbers and flags that are used internally in the course of the paragraph decomposition.

\par@lineR When we first form the paragraph, it goes into a box register, \l@dLcolrawbox or \l@dRcolrawbox for right text, instead of onto the current vertical list. The \ifnumberedpar@ flag will be **true** while a paragraph is being processed in that way. \num@lines(R) will store the number of lines in the paragraph when it's complete. When we chop it up into lines, each line in turn goes into the \one@line or \one@lineR register, and \par@line(R) will be the number of that line within the paragraph.

```

737 \newcount\num@linesR
738 \newbox\one@lineR
739 \newcount\par@lineR

```

\pstartL \pstart starts the paragraph by clearing the \inserts@list list and other relevant variables, and then arranges for the subsequent text to go into the appropriate box. \pstart needs to appear at the start of every paragraph that's to be numbered.

Beware: everything that occurs between \pstart and \pend is happening within a group; definitions must be global if you want them to survive past the end of the paragraph.

We have to have specific left and right \pstart when parallel processing; among other things because of potential changes in the linewidth.

```

740 \newcommand*\pstartL{%
741 \if@nobreak
742 \let\oldnobreak\nobreaktrue
743 \else

```

```

803 \fi

```

We set all the usual interline penalties to zero and then immediately call \endgraf to end the paragraph; this ensures that there'll be no large interline penalties to prevent us from slicing the paragraph into pieces. These penalties revert to the values that you set when the group for the \vbox ends.

```

804 \l@dzopenalties
805 \endgraf\global\num@lines=\prevgraf\egroup
806 \global\par@line=0

```

End the group that was begun in the \pstart.

```

14.2 Processing one line

For parallel texts we have to be able to process left and right lines independently. For sequential text we happily use the original `\do@line`. Otherwise ...

`\l@dleftbox` A line of left text will be put in the box `\l@dleftbox`, and analogously for a line of right text.

```
824 \newbox\l@dleftbox
825 \newbox\l@drightbox
826
```

`\countLline` We need to know the number of lines processed.

```
\countRline 827 \newcount\countLline
            \countLline \z@
829 \newcount\countRline
            \countRline \z@
831
```

`\@donereallinesL` We need to know the number of ‘real’ lines output (i.e., those that have been input by the user), and the total lines output (which includes any blank lines output for synchronisation).

```
\@donetotallinesR 832 \newcount\@donereallinesL
833 \newcount\@donetotallinesL
834 \newcount\@donereallinesR
835 \newcount\@donetotallinesR
836
```

`\do@lineL` The `\do@lineL` macro is called to do all the processing for a single line of left text.

```
837 \newcommand*\do@lineL{%
838   \advance\countLline \ne
839   \ifvbox\namebox{\l@dLcolrawbox\the\l@dpscL}%
840   {\vbadness=10000

1113 \add@inserts@nextR}
1114

```

14.6 Penalties

\add@penaltiesL \add@penaltiesL is the last macro used by \do@lineL. It adds up the club, widow, and interline penalties, and puts a single penalty of the appropriate size back into the paragraph; these penalties get removed by the \vsplit operation. \displaywidowpenalty and \brokenpenalty are not restored, since we have no easy way to find out where we should insert them.

In the code below, which is a virtual copy of the original `\add@penalties`, `\num@lines` is the number of lines in the whole paragraph, and `\par@line` is the line we're working on at the moment. The count `\@l@dtempcnta` is used to calculate and accumulate the penalty; it is initially set to the value of `\ballast@count`, which has been worked out in `\do@ballast`. Finally, the penalty is checked to see that it doesn't go below -10000 .

```
\newcommand*{\add@penaltiesR}{\@l@dtempcnta=\ballast@count
\ifnum\num@linesR>\@ne
  \global\advance\par@lineR \@ne
  \ifnum\par@lineR=\@ne
    \advance\@l@dtempcnta by \clubpenalty
  \fi
  \ifnum\@l@dtempcntb=\par@lineR \advance\@l@dtempcntb \@ne
  \ifnum\@l@dtempcntb=\num@linesR
    \advance\@l@dtempcnta by \widowpenalty
  \fi
  \ifnum\par@lineR<\num@linesR
    \advance\@l@dtempcnta by \interlinepenalty
  \fi
\fi
\ifnum\@l@dtempcnta=\z@
  \relax
\else
  \ifnum\@l@dtempcnta>-10000
    \penalty\@l@dtempcnta
  \else
    \penalty -10000
  \fi
\fi
\fi}
```

This is for a single chunk. However, as we are probably dealing with several chunks at a time, the above is nor really relevant. I think that it is likely with parallel text that there is no real need to add back any penalties; even if there was, they would have to match across the left and right lines. So, I end up with the following.

```
1115 \newcommand*{\add@penaltiesL}{}
1116 \newcommand*{\add@penaltiesR}{}
1117
```

14.7 Printing leftover notes

`\flush@notesR` The `\flush@notesR` macro is called after the entire right text has been sliced up and sent on to the vertical list.

```
1118 \newcommand*{\flush@notesR}{%
1119   \cloop
1120   \ifx\inserts@listR\empty \else
1121     \glp\inserts@listR\to\@insertR
1122     \cinsertR
```

```

1123      \global\let\@insertR=\undefined
1124  \repeat}
1125

```

15 Footnotes

15.1 Outer-level footnote commands

`\Afootnote` The outer-level footnote commands will look familiar: they're just called `\Afootnote`, `\Bfootnote`, etc., instead of plain `\footnote`. What they do, however, is quite different, since they have to operate in conjunction with `\edtext` when numbering is in effect.

If we're within a line-numbered paragraph, then, we tack this note onto the `\inserts@list` list, and increment the deferred-page-bottom-note counter.

```

1126 \renewcommand*\Afootnote[1]{%
1127   \ifnumberedpar@
1128     \ifledRcol
1129       \xright@appenditem{\noexpand\vAfootnote{A}%
1130         {{\l@d@nums}{\@tag}{#1}}}\to\inserts@listR
1131     \global\advance\insert@countR \one
1132   \else
1133     \xright@appenditem{\noexpand\vAfootnote{A}%
1134       {{\l@d@nums}{\@tag}{#1}}}\to\inserts@list
1135     \global\advance\insert@count \one
1136   \fi

```

Within free text, there's no need to put off making the insertion for this note. No line numbers are available, so this isn't generally that useful; but you might want to use it to get around some limitation of ledmac.

```

1137 \else
1138   \vAfootnote{A}{{0|0|0|0|0|0|0}{#1}}%
1139 \fi\ignorespaces}

```

`\Bfootnote` We need similar commands for the other footnote series.

```

\Cfootnote 1140 \renewcommand*\Bfootnote[1]{%
\Dfootnote 1141   \ifnumberedpar@
\Efootnote 1142     \ifledRcol

15.2 Normal footnote formatting

The `\printlines` macro prints the line numbers for a note—which, in the general case, is a rather complicated task. The seven parameters of the argument are the line numbers as stored in `\l@d@nums`, in the form described on page ??: the starting page, line, and sub-line numbers, followed by the ending page, line, and sub-line numbers, and then the font specifier for the lemma.

`\printlinesR` This is the right text version of `\printlines` and takes account of `\Rlineflag`.
`\leadsavedprintlines` Just in case, `\leadsavedprintlines` is a copy of the original `\printlines`.

Just a reminder of the arguments:

```

\printlinesR #1 | #2 | #3 | #4 | #5 | #6 | #7
\printlinesR start-page | line | subline | end-page | line | subline | font
1267 \def\printlinesR#1|#2|#3|#4|#5|#6|#7{\begingroup
1268   \setprintlines{#1}{#2}{#3}{#4}{#5}{#6}%
1269   \ifl@d@pnum #1\fullstop\fi
1270   \ifledplinenum \linenumr@p{#2}\Rlineflag\else \symplinenum\fi
1271   \ifl@d@ssub \fullstop \sublinenumr@p{#3}\fi
1272   \ifl@d@dash \endashchar\fi
1273   \ifl@d@pnum #4\fullstop\fi

1276 \endgroup}
1277
1278 \let\leadsavedprintlines\printlines
1279

```

16 Cross referencing

\labelref@listR Set up a new list, \labelref@listR, to hold the page, line and sub-line numbers for each label in right text.

```
1280 \list@create{\labelref@listR}
1281
```

\edlabel The \edlabel command first writes a \lab macro to the \linenum@out file. It then checks to see that the \labelref@list actually has something in it (if not, it creates a dummy entry), and pops the next value for the current label, storing it in \label@refs. Finally it defines the label to be \empty so that any future check will turn up the fact that it has been used.

```
1282 \renewcommand*{\edlabel}[1]{\@bsphack
1283   \ifledRcol
1284     \write\linenum@outR{\string\@lab}%
1285     \ifx\labelref@listR\empty
1286       \xdef\label@refs{\zz@@@}%
1287     \else
1288       \gl@p\labelref@listR\to\label@refs
1289     \fi
1290     \protected@write\auxout{}{%
1291       {\string\l@dmake@labelsR\space\thepage|\label@refs|{\#1}}%
1292   \else
1293     \write\linenum@out{\string\@lab}%
1294     \ifx\labelref@list\empty
1295       \xdef\label@refs{\zz@@@}%
1296     \else
1297       \gl@p\labelref@list\to\label@refs

19 Verse

Before we can define the main stanza macros we need to be able to save and reset the category code for &. To save the current value we use \next from the \loop macro.

```
1423 \chardef\next=\catcode`\&
1424 \catcode`\&=\active
1425
```

`astanza` This is roughly an environmental form of `\stanza`, which treats its stanza-like contents as a single chunk.

```
1426 \newenvironment{astanza}{%
1427   \startstanzahook
1428   \catcode`\&\active
```

```

1429   \global\stanza@count\@ne
1430   \ifnum\useusernamecount{sza@0@}=\z@%
1431     \let\stanza@hang\relax
1432     \let\endlock\relax
1433   \else
1434     %% \interlinepenalty\@M % this screws things up, but I don't know why
1435     \rightskip\z@ plus 1fil\relax
1436   \fi
1437   \ifnum\useusernamecount{szp@0@}=\z@%
1438     \let\sza@penalty\relax
1439   \fi
1440   \def&{%
1441     \endlock\mbox{}%
1442     \sza@penalty
1443     \global\advance\stanza@count\@ne
1444     \c@stanza@line}%
1445   \def&{%
1446     \endlock\mbox{}%
1447     \pend
1448     \endstanzaextra}%
1449   \pstart
1450   \c@stanza@line
1451 }{%
1452

```

`\c@stanza@line` This gets put at the start of each line in the environment. It sets up the paragraph style — each line is treated as a paragraph.

```

1453 \newcommand*{\c@stanza@line}{%
1454   \parindent=\csname sza@\number\stanza@count \endcsname\stanzaindentbase
1455   \par
1456   \stanza@hang\mbox{}%
1457   \ignorespaces}
1458

```

Lastly reset the modified category codes.

```

1459   \catcode`&=\next
1460

```

20 Naming macros

The LaTeX kernel provides `\c@namedef` and `\c@namuse` for defining and using macros that may have non-letters in their names. We need something similar here as we are going to need and use some numbered boxes and counters.

`\newnamebox` A set of macros for creating and using ‘named’boxes; the macros are called after `\setnamebox` the regular box macros, but including the string ‘name’.

```

\unhnamebox 1461 \providecommand*{\newnamebox}[1]{%
\unvnamebox 1462   \expandafter\newbox\csname #1\endcsname}%
\namebox

```

```

1463 \providecommand*{\setnamebox}[1]{%
1464   \expandafter\setbox\csname #1\endcsname}%
1465 \providecommand*{\unhnamebox}[1]{%
1466   \expandafter\unhbox\csname #1\endcsname}%
1467 \providecommand*{\unvnamebox}[1]{%
1468   \expandafter\unvbox\csname #1\endcsname}%
1469 \providecommand*{\namebox}[1]{%
1470   \csname #1\endcsname}%
1471
\newnamecount Macros for creating and using ‘named’ counts.
\usenamecount 1472 \providecommand*{\newnamecount}[1]{%
1473   \expandafter\newcount\csname #1\endcsname}%
1474 \providecommand*{\usenamecount}[1]{%
1475   \csname #1\endcsname}%
1476

```

21 Counts and boxes for parallel texts

In sequential text, each chunk (that enclosed by `\pstart ... \pend`) is put into a box called `\raw@text` and then immediately printed, resulting in the box being emptied and ready for the next chunk. For parallel processing multiple boxes are needed as printing is delayed. We also need extra counters for various things.

`\maxchunks` The maximum number of chunk pairs before printing has to be called for. The `\l@dc@maxchunks` default is 10 chunk pairs.

```

1477 \newcount\l@dc@maxchunks
1478 \newcommand{\maxchunks}[1]{\l@dc@maxchunks=#1}
1479 \maxchunks{10}
1480

```

`\l@dnumpstartsL` The numbers of left and right chunks. `\l@dnumpstartsL` is defined in `ledmac`.

`\l@dnumpstartsR` 1481 `\newcount\l@dnumpstartsR`
1482

`\l@pscL` A couple of scratch counts for use in left and right texts, respectively.

`\l@pscR` 1483 `\newcount\l@dpsscL`
1484 `\newcount\l@dpsscR`
1485

`\l@dsetuprawboxes` This macro creates `\maxchunks` pairs of boxes for left and right chunks. The boxes are called `\l@dLcolrawbox1`, `\l@dLcolrawbox2`, etc.

```

1486 \newcommand*{\l@dsetuprawboxes}{%
1487   \l@dtmpcntb=\l@dc@maxchunks
1488   \loop\ifnum\l@dtmpcntb>\z@
1489     \newnamebox{\l@dLcolrawbox}{\the\l@dtmpcntb}%
1490     \newnamebox{\l@dRcolrawbox}{\the\l@dtmpcntb}%
1491     \advance\l@dtmpcntb \m@ne

```

```
1492 \repeat}
1493
```

\l@dsetupmaxlinecounts To be able to synchronise left and right texts we need to know the maximum number of text lines there are in each pair of chunks. \l@dsetupmaxlinecounts creates \maxchunks new counts called \l@dmaxlinesinpar1, etc., and \l@dzeromaxlinecounts zeroes all of them.

```
1494 \newcommand*{\l@dsetupmaxlinecounts}{%
1495   \l@dtempcntb=\l@dc@maxchunks
1496   \loop\ifnum\l@dtmpcntb>\z@

1517
```

22 Fixing babel

With parallel texts there is the possibility that the two sides might use different languages via `babel`. On the other hand, `babel` might not be called at all (even though it might be already built into the format).

With the normal sequential text each line is initially typeset in the current language environment, and then it is output at which time its attachments are typeset (in the same language environment). In the parallel case lines are typeset in their current language but an attachment might be typeset outside the language environment of its line if the left and right side languages are different. To counter this, we have to make sure that the correct language is used at the proper times.

```

\ifl@dusedbabel A flag for checking if babel has been used as a package.
\l@dusedbabelfalse 1518 \newif\ifl@dusedbabel
\l@dusedbabeltrue 1519 \l@dusedbabelfalse

\l@dsamelang A flag for checking if the same babel language has been used for both the left and
\l@dsamelangfalse right texts.
\l@dsamelangtrue 1520 \newif\ifl@dsamelang
1521 \l@dsamelangtrue

\l@dchecklang I'm going to use \theledlanguageL and \theledlanguageR to hold the names of
the languages used for the left and right texts. This macro sets \ifl@dsamelang
TRUE if they are the same, otherwise it sets it FALSE.
1522 \newcommand*\l@dchecklang{%
1523 \l@dsamelangfalse
1524 \edef\@tempa{\theledlanguageL}\edef\@temp{\theledlanguageR}%
1525 \ifx\@tempa\@tempb
1526 \l@dsamelangtrue
1527 \fi}
1528

\l@dbbl@set@language In babel the macro \bbbl@set@language{\langle lang\rangle} does the work when the language
\langle lang\rangle is changed via \selectlanguage. Unfortunately for me, if it is given an
argument in the form of a control sequence it strips off the \ character rather than
expanding the command. I need a version that accepts an argument in the form
\lang without it stripping the \.
1529 \newcommand*\l@dbbl@set@language[1]{%
1530 \edef\languagename{\#1}%
1531 \select@language{\languagename}%
1532 \if@filesw

1659 \next
1660 \global\@donereallinesR \z@}
1661

```

24 Parallel pages

This is considerably more complicated than parallel columns.

\numpagelinesL Counts for the number of lines on a left or right page, and the smaller of the
\numpagelinesR number of lines on a pair of facing pages.

```

\l@dminpagelines 1662 \newcount\numpagelinesL
1663 \newcount\numpagelinesR
1664 \newcount\l@dminpagelines
1665

```

\Pages The \Pages command results in the previous Left and Right texts being typeset
on matching facing pages. There should be equal numbers of chunks in the left
and right texts.

```

1666 \newcommand*{\Pages}{%
1667 \typeout{%
1668 \typeout{***** PAGES *****}
1669 \ifnum\l@dnumpststartsL=\l@dnumpststartsR\else
1670 \led@err@BadLeftRightPstarts{\the\l@dnumpststartsL}{\the\l@dnumpststartsR}%
1671 \fi

```

Get onto an empty even (left) page, then initialise counters, etc.

```

1672 \cleartol@devenpage
1673 \begingroup

```

```

1674   \l@dzeroopenalties
1675   \endgraf\global\num@lines=\prevgraf
1676       \global\num@linesR=\prevgraf
1677   \global\par@line=\z@
1678   \global\par@lineR=\z@
1679   \global\l@dpscL=\z@
1680   \global\l@dpscR=\z@
1681   \writtenlinesLfalse
1682   \writtenlinesRfalse

```

Check if there are chunks to be processed.

```

1683   \check@pstarts
1684   \loop\if@pstarts

```

Loop over the number of chunks, incrementing the chunk counts ($\l@dpscL$ and $\l@dpscR$ are chunk (box) counts.)

```

1685   \global\advance\l@dpscL \cne
1686   \global\advance\l@dpscR \cne

```

Calculate the maximum number of real text lines in the chunk pair, storing the result in the relevant $\l@dmaxlinesinpar$.

```

1687   \getlinesfromparlistL
1688   \getlinesfromparlistR
1689   \l@dcalc@maxoftwo{\@cs@linesinparL}{\@cs@linesinparR}%
1690       {\useusernamecount{\l@dmaxlinesinpar\the\l@dpscL}}%
1691   \check@pstarts
1692   \repeat

```

Zero the counts again, ready for the next bit.

```

1693   \global\l@dpscL=\z@
1694   \global\l@dpscR=\z@

```

Get the number of lines on the first pair of pages and store the minimum in $\l@dminpagelines$.

```

1695   \getlinesfrompagelistL
1696   \getlinesfrompagelistR
1697   \l@dcalc@minoftwo{\@cs@linesonpageL}{\@cs@linesonpageR}%
1698       {\l@dminpagelines}%

```

Now we start processing the left and right chunks ($\l@dpscL$ and $\l@dpscR$ count the left and right chunks), starting with the first pair.

```

1699   \check@pstarts
1700   \if@pstarts

```

Increment the chunk counts to get the first pair.

```

1701   \global\advance\l@dpscL \cne
1702   \global\advance\l@dpscR \cne

```

We haven't processed any lines from these chunks yet, so zero the respective line counts.

```

1703   \global\@donereallinesL=\z@
1704   \global\@donetotallinesL=\z@

```

```
1705      \global\@donereallinesR=\z@  
1706      \global\@donetotallinesR=\z@
```

Start a loop over the boxes (chunks).

```
1707      \checkraw@text
```

```
1708 %      \begingroup
```

```
1709 {          \loop\ifaraw@text

ि/code;

A Examples

This section presents some sample documents.

The figures are from processed versions of the files. Having latexed a file I used DVIPS to get Encapsulated PostScript, then the epstopdf script to get a PDF version as well, for example:

```
> latex villon
> latex villon
> latex villon
> dvips -E -o villon.eps villon % produces villon.eps
> epstopdf villon.eps           % produces villon.pdf
```

For a multipage example, DVIPS has an option to output a range of pages (-p for the first and -l (letter l) for the last). For instance, to output a single page, say page 2:

```
> latex djd17nov
> latex djd17nov
> latex djd17nov
> dvips -E -p2 -l2 -o djd17novL.eps djd17nov % produces djd17novL.eps
> epstopdf djd17novL.eps                         % produces djd17novL.pdf
```

For those who aren't fascinated by LaTeX code, I show the all the typeset results first, then the code that produced them.

I thought that limericks were peculiarly English, but this appears not to be the case. As with most limericks this one is by Anonymous.

Il y avait un jeune homme de Dijon,	There was a young man of Dijon,	1
2 Qui n'avait que peu de religion.	Who had only a little religion,	
Il dit: 'Quant à moi,	He said: 'As for me,	3
4 Je déteste tous les trois,	I detest all the three,	
Le Père, et le Fils, et le Pigeon.'	The Father, the Son, and the Pigeon.'	5

The following is verse LXXIII of François Villon's *Le Testament* (The Testament), composed in 1461.

Dieu mercy et Tacque Thibault,	Thanks to God — and to Tacque	
2 Qui tant d'eaue froid m'a fait boire,	Thibaud	
Mis en bas lieu, non pas en hault,	Who made me drink so much cold	2r
4 Mengier d'angoisse maints poire,	water,	
Enferré ... Quant j'en ay memoire,	Put me underground instead of	
6 Je Prie pour luy <i>et reliqua</i> ,	higher up	
Que Dieu luy doint, et voire, voire!	And made me eat such bitter fruit,	4r
8 Ce que je pense ... <i>et cetera</i> .	In chains ... When I think of this,	
	I pray for him— <i>et reliqua</i> ;	6r
	May God grant him (yes, by God)	
	What I think ... <i>et cetera</i> .	8r

The translation and notes are by Anthony Bonner, *The Complete Works of François Villon*, published by Bantam Books in 1960.

4 poire d'angoisse] This has a triple meaning: literally it is the fruit of the choke pear, figuratively it means 'bitter fruit', and it also refers to a torture instrument.

6 *et reliqua*] and so on

1r Tacque Thibaud] A favourite of Jean, Duc de Berry and loathed for his exactions and debauchery. Villon uses his name as an insulting nickname for Thibaud d'Auxigny, the Bishop of Orléans.

2r cold water] Can either refer to the normal prison diet of bread and water or to a common medieval torture which involved forced drinking of cold water.

1 De ecclesia S. Stephani Novimagensi

Nobilis itaque comes Otto imperio et dominio Novimagensi sibi, ut praefertur, impignoratis et commissis proinde praeesse cupiens, anno LIII superius descripto, mense Iunio, una cum iudice, scabinis ceterisque civibus civitatis Novimagingensis, pro ipsius et inhabitantium in ea necessitate, commodo et utilitate, ut ecclesia eius parochialis extra civitatem sita destrueretur et infra muros transferretur ac de novo construeretur, a reverendo patre domino Conrado de Hofsteden, archiepiscopo Coloniensi, licentiam, et a venerabilibus dominis decano et capitulo sanctorum Apostolorum Coloniensi, ipsius ecclesiae ab antiquo veris et pacificis patronis, consensum, citra tamen praiejudicium, damnum aut gravamen iurium et bonorum eorundem, impetravit.

5

10

Et exinde liberum locum eiusdem civitatis qui dicitur Hundisburg, de praeli-
bati Wilhelmi Romanorum regis, ipsius fundi domini, consensu, ad aedifican-
dum et consecrandum ecclesiam et coemeterium, eisdem decano et capitulo de
expresso eiusdem civitatis assensu libera contradiderunt voluntate, obligantes
se ipsi comes et civitas dictis decano et capitulo, quod in recompensationem
illius areae infra castrum et portam, quae fuit dos ecclesiae, in qua plebanus
habitare solebat—quae tunc per novum fossatum civitatis est delecta—aliam
aream competentem et ecclesiae novae, ut praefertur, aedificandae satis con-
tiguam, ipsi plebano darent et assignarent. Et desuper apud dictam ecclesiam
sanctorum Apostolorum est littera sigillis ipsorum Ottonis comitis et civitatis
Novimagingensis sigillata.

6-7 William is confusing two charters that are five years apart. Permission from St. Apostles' Church in Cologne had been obtained as early as 1249. Cf. Sloet, *Oorkondenboek* nr. 707 (14 November 1249): "...nos devotionis tue precibus annuentes, ut ipsam ecclesiam faciens demoliri transferas in locum alium competentem, tibi auctoritate presentium indulgemus..."
11-19 Cf. Sloet, *Oorkondenboek* nr. 762 (June 1254)

1 St. Stephen's Church in Nijmegen

After the noble count Otto had taken in pledge the power over Nijmegen,¹ like I have written above, he wanted to protect the town. So in June 1254 he and the judge, the sheriffs and other citizens of Nijmegen obtained permission to demolish the parish church that lay outside the town walls,² to move it inside the walls and to rebuild it new. This operation was necessary and useful both for Otto himself and for the inhabitants of the town. The reverend father Conrad of Hochstaden, archbishop of Cologne,³ gave his permission. So did the reverend dean and canons of the chapter of St. Apostles' in Cologne, who had long⁴ been the true and benevolent patrons of the church—but they did not allow Otto to do anything without their knowledge, nor to infringe their rights, nor to damage their property.

And so the count and the town voluntarily gave an open space in town called Hundisburg, which was owned by the aforementioned king William, to the dean and chapter of St. Apostles' in order to build and consecrate a church and graveyard. King William approved and the town of Nijmegen explicitly expressed its assent. A new ditch was dug on property of the church near the castle and the harbour,⁵ causing the demolition of the presbytery. In compensation, the count and citizens committed themselves to giving the parish priest another suitable space close enough to the new church that was about to be built. A letter about these transactions, with the seals of count Otto and the town of Nijmegen, is kept at St. Apostles' church.⁶

// One additional line to show synchronization. //

¹In 1247 William II (1227–1256) count of Holland needed money to fight his way to Aachen to be crowned King of the Holy Roman Empire. He gave the town of Nijmegen in pledge to Otto II (1229–1271) count of Guelders.

²Since the early seventh century old St. Stephen's church had been located close to the castle, at today's Kelfkensbos square. Traces of the church and the presbytery were found during excavations in 1998–1999.

³Conrad of Hochstaden († 1261) was archbishop of Cologne in 1238–1261. Nijmegen belonged to the archdiocese of Cologne until 1559.

⁴They probably became the patrons when the chapter was established in the early eleventh century. About the church and the chapter, see Gottfried Stracke, *Köln: St. Aposteln*, Stadtspuren – Denkmäler in Köln, vol. 19, Köln: J. P. Bachem, 1992.

⁵Nowadays, the exact location of the medieval ditch—and of two Roman ones—can be seen in the pavement of Kelfkensbos square.

⁶The original letter is lost. A 15th century transcription of it is kept at the Historisches Archiv der Stadt Köln (HASTK).

1 Arma gravi numero violentaque bella parabam
2 edere, materiā conveniente modis.
3 Par erat inferior versus—risisse Cupido
4 dicitur atque unum surripuisse pedem.

5 “Quis tibi, saeve puer, dedit hoc in carmina iuris?
6 Pieridum vates, non tua turba sumus.
7 Quid si praeripiāt flavae Vēnus arma Minervae,
8 ventilet accensas flava Minerva faces?

9 Quis probet in silvis Cererem regnare iugosis,
10 lege pharetratae Virginis arva colī?
11 Crinibus insignem quis acuta cuspide Phoebum
12 instruat, Aoniam Marte movente lyram?

6 sumus] note lost 11 acuta] acutā (abl. abs.)

Figure 4: First left page output from `djdpoems.tex`.

1R I was preparing to sing of weapons and violent wars,
 2R in heavy numbers, with the subject matter suited to the verse measure.
 3R The even lines were as long as the odd ones, but Cupid laughed,
 4R they said, and he stole away one foot.¹

 5R "O cruel boy, who gave you the right over poetry?
 6R We poets belong to the Pierides,² we are not your folk.
 7R What if Venus should seize away the arms of Minerva with the golden hair,
 8R if Minerva with the golden hair should fan alight the kindled torch of
 love?

 9R Who would approve of Ceres³ reigning on the woodland ridges,
 10R and of land tilled under the law of the Maid with the quiver⁴?
 11R Who would provide Phoebus with his beautiful hair with a sharp-pointed
 spear,
 12R while Mars stirs the Aonian lyre?⁵

¹I.e., the even lines, which were hexameters (with six feet) became pentameters (with five feet).

²Muses

³Ceres was the Roman goddess of the harvest.

⁴By 'Virgo' ('Virgin') Ovid means Diana, the Roman goddess of the hunt.

⁵Lines 7R–12R show some paradoxical situations that would occur if the gods didn't stay with their own business.

12R Aonian] Mount Parnassus, where the Muses live, is located in Aonia.

Figure 5: First right page output from `djdpoems.tex`.

2261 \leavevmode\section{St.\ Stephen's Church in Nijmegen}
2262

```

```

2263 \noindent\setline{1}%
2264 After the noble count Otto had taken in pledge the power over
2265 Nijmegen, \footnote{In 1247 William II\protect\index{William II of Holland}
2266 (1227--1256) count of Holland needed money to fight his way to
2267 Aachen\protect\index{Aachen} to be crowned King of the Holy Roman
2268 Empire. He gave the town of Nijmegen in pledge to Otto
2269 II\protect\index{Otto II of Guelders} (1229--1271) count of Guelders.}
2270 like I have written above, he wanted to protect the town. So in June
2271 1254\leadsidenote{1254} he and the judge, the sheriffs and other
2272 citizens of Nijmegen obtained permission to demolish the parish
2273 church that lay outside the town walls,\footnote{Since the early
2274 seventh century old St.\ Stephen's church had been located close
2275 to the castle, at today's
2276 Kelfkensbos\protect\index{Kelfkensbos (Nijmegen)} square.
2277 Traces of the church and the presbytery were found during excavations
2278 in 1998--1999.} to move it inside the walls and to rebuild it new.
2279 This operation was necessary and useful both for Otto himself and
2280 for the inhabitants of the town. The reverend father Conrad of
2281 Hochstaden, archbishop of
2282 Cologne,\footnote{Conrad of Hochstaden (\textdagger) 1261) was
2283 archbishop of Cologne in 1238--1261. Nijmegen belonged to the
2284 archdiocese of Cologne until 1559.} gave his permission. So did the
2285 reverend dean and canons of the chapter of St.\ Apostles'\protect\index{St. Apostles' (Cologne)} in Cologne, who had
2286 long\footnote{They probably became the patrons when the chapter was
2287 established in the early eleventh century. About the church and the
2288 chapter, see Gottfried Stracke\protect\index{Stracke, G.},
2289 \textit{K\"{o}ln: St.\ Aposteln}, Stadtspuren -- Denkm\"{a}ler in
2290 vol. 19, K\"{o}ln: J.\,P.\ Bachem, 1992.} been the true
2291 and benevolent patrons of the church---but they did not allow Otto
2292 to do anything without their knowledge, nor to infringe their rights,
2293 nor to damage their property.
2294
2295 \pend
2296
2297 \pstart
2298 And so the count and the town voluntarily gave an open space in town
2299 called Hundisburg, which was owned by the aforementioned king William,
2300 to the dean and chapter of St.\ Apostles' in order to build and
2301 consecrate a church and graveyard. King William approved and the
2302 town of Nijmegen explicitly expressed its assent. A new ditch was dug
2303 on property of the church near the castle and the
2304 harbour,\footnote{Nowadays, the exact location of the medieval
2305 ditch---and of two Roman ones---can be seen in the pavement of
2306 Kelfkensbos\protect\index{Kelfkensbos (Nijmegen)} square.} causing
2307 the demolition of the presbytery. In compensation, the count and
2308 citizens committed themselves to giving the parish priest another
2309 suitable space close enough to the new church that was about to be
2310 built. A letter about these transactions, with the seals of count
2311 Otto and the town of Nijmegen, is kept at St.\ Apostles'
2312 church.\footnote{The original letter is lost. A 15th century

A.3 Example poetry on parallel facing pages

This example, illustrated in Figures 4 to 7, was originally provided in November 2004 by Dirk-Jan Dekker for an earlier version of *ledpar*. I have updated it, and also extended it to show the difference between the *\stanza* command and the *astanza* environment. *\stanza* is used for the first pair of pages and *astanza* for the second pair. Note the definition of *\endstanzaextra* to give a short line after each stanza.
