## 1 Introduction

This document class is designed to facilitate easy development of curriculum vitae (CV). A set of predefined macros and environments are available for most common sections on a CV. These special elements have been designed to ease quick creation. This document class was co-designed with a business card, which can be found on GitHub: <https://github.com/opieters/business-card>.

The design of this CV is split up in three parts, illustrated by fig. 1. Each of these parts that make up this CV template will be detailed in the sections below.

---

\*This document corresponds to `limecv` v0.1.3, dated 2017/09/12.

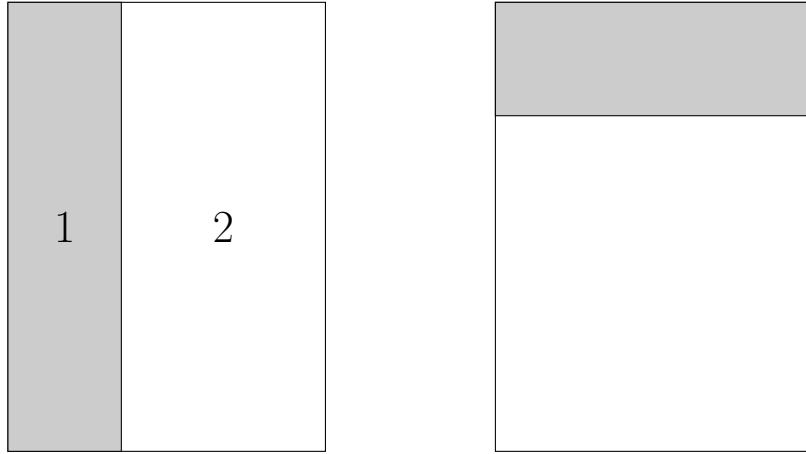

Figure 1: Illustration of a basic template. The image to the left depicts the actual CV: sidebar to the left (1) with main content on the right (2). The image to the right depicts the cover letter design.

## 2 Requirements

It is advised to use the **XeLaTeX** engine. However, there is also support for **LaTeX** and **LuaLaTeX**. In these cases, fonts might be different than intended and side bearings will not be corrected, since only the XeLaTeX engine has access to these. In the subsequent sections, it will always be assumed that the XeLaTeX compiler is used (unless noted otherwise).

Any font can be used, though by default the **Fira**<sup>1</sup> font is used. This should be installed and accessible by the typesetting system. If another font is desired, it can be overwritten using the **sansfont** document class options and **\cvMainFont** command. The mono spaced font can be changed by means of the **monofont** class option.

**FontAwesome**<sup>2</sup> is the icon font used. This font should also be available and cannot be replaced by another icon font. Most modern TeX distributions ship with this font since they provide the **fontawesome** package.

## 3 General Macros and Document Class Options

### 3.1 Internationalisation

**\cvSetLanguage**

Currently, there is only internationalisation support for English and Dutch. The default language is English and can be modified using the **\cvSetLanguage** macro. Possible arguments are: **english** and **dutch**. If you want to use a different language, you need to modify the keys that hold the different section titles. These

---

<sup>1</sup><https://github.com/mozilla/Fira>  
<sup>2</sup><http://fontawesome.io>

can be in the source code. The following snippet illustrates how this can be done for French:

```
1 \pgfkeys{/@cv/names/education = Formations}
2 \pgfkeys{/@cv/names/skills = Comp tences}
```

## 4 Sidebar

The sidebar should contain personal information such as your name, job title (or industry or similar), contact information, small bio, interests and language skills. Special environments and commands have been defined for each of these sections and will be described below.

Everything that should be inside the sidebar should be placed in the `cvSidebar` environment. This environment is placed on the left side of the page by default. If it should be typeset on the right side, use the starred version (`cvSidebar*`)

The following environments are available inside the sidebar environment: `cvProfile`, `cvContact`, `cvLanguages`, `cvInterests` and `cvProjects`.

**\cvID** This command typesets a picture (in a circle) with name and position underneath it. The argument order is: `\cvID{<first name>}{<last name>}[<picture location>]{<job position>}`. Empty fields are allowed for the third and fourth arguments. No picture and no job position will then be typeset. Example code:

```
1 \cvID{John}{Doe}{profile_picture}{Broker}
```

**cvProfile** This environment contains a brief profile description or biography. No additional arguments are allowed. Example code:

```
1 \begin{cvProfile}
2   A short biography goes here.
3 \end{cvProfile}
```

**cvContact** All the contact information goes here. Inside this environment, the following commands are available:

**\cvContactAddress** • `\cvContactAddress{<address>}` typesets an address. How this address should be typeset exactly, is left to the user. The use of line breaks (\\\) is allowed;

**\cvContactEmail** • `\cvContactEmail{<link>}{<email address>}` typesets an email address. The link variable should be something like `mailto:john@doe.tld`. Clicking on the email address will then automatically open the default email client with this address as recipient. If the link argument is left empty, no link will be created.

**\cvContactPhone** • `\cvContactPhone{<mobile phone number>}` typesets a mobile phone number.

**\cvContactWebsite** • `\cvContactWebsite{<link>}{<website URL>}` typesets a website. The link variable should be a something like `https://johndoe.tld`. Clicking on the

- website will then automatically open the default web browser. If the link argument is left empty, no action will be performed upon clicking on the website.
- `\cvContactGithub{<link>}{<username>}` typesets a GitHub profile. The link variable should be a valid link to the GitHub profile (for example <https://github.com/johndoe>). Clicking on the username will then automatically open the default web browser. If the link argument is left empty, no action will be performed upon clicking on the website.
  - `\cvContactLinkedin{<link>}{<username>}` typesets a LinkedIn profile. The link variable should be a link to your LinkedIn profile homepage (for example <https://www.linkedin.com/in/johndoe/>). Clicking on the username will then automatically open the default web browser. If the link argument is left empty, no action will be performed upon clicking on the website.
  - `\cvContactTwitter{<link>}{<username>}` typesets a Twitter profile. The link variable should direct to your Twitter profile. An example link looks as follows: <https://twitter.com/johndoe>. Clicking on the username will then automatically open the default web browser. If the link argument is left empty, no action will be performed upon clicking on the website.
  - `\cvContactKeybase{<link>}{<fingerprint>}` typesets a Keybase fingerprint (and account). The link variable should be a link to the KeyBase profile (e.g. <https://keybase.io/johndoe>). Clicking on the fingerprint will then automatically open the default web browser. If the link argument is left empty, no action will be performed upon clicking on the website.

A full example:

```

1 \begin{cvContact}
2   \cvContactAddress{Some Street 78\B-9000 Ghent\ \
3     Belgium}
4   \cvContactEmail{mailto:john@doe.tld}{john@doe.tld}
5   \cvContactPhone{+1 781 555 1212}
6   \cvContactWebsite{https://doe.tld}{doe.tld}
7   \cvContactGithub{https://github.com/johndoe}{johndoe}
8   \cvContactLinkedin{https://www.linkedin.com/in/johndoe \
9     /}{johndoe}
10  \cvContactTwitter{https://twitter.com/johndoe}{ \
11    @johndoe}
12  \cvContactKeybase{https://keybase.io/johndoe}\texttt{ \
13    AAAA 5555 BBBB FFFF}}
14 \end{cvContact}

```

If you wish to add contact information that is not available by default, you can extend the command using two internal commands: `\cv@ContactTemplateLink` and `\cv@ContactTemplate`. See the source code for usage instructions.

`cvLanguages` This environment is used to showcase language skills. The `\cvLanguage{<language>}{<skill level>}` should be used inside this environment. The skill level is a real value with a maximum value of 5. If higher values are used, the result will not be typeset properly. An example is included below.

```

1 \begin{cvLanguages}
2   \cvLanguage{English (native)}{5}
3   \cvLanguage{German (B1)}{3}
4   \cvLanguage{Spanish}{3}
5 \end{cvLanguages}

```

`cvInterests` Typeset interests (can be both professional and personal) using `cvInterests`. By default it just typesets a list of items in the long format (`long`). The short format can be activated by passing the `short` option to the environment. Inside this environment, three commands can be used: `\cvInterestsPersonal`, `\cvInterestsProfessional` and `\cvInterest`. `\cvInterestsPersonal` and `\cvInterestsProfessional` add optional sections inside this environment to differentiate between personal and professional interests respectively. Both macros have no options nor arguments. The `\cvInterest{<icon>}{<interest>}` command takes an icon and interest as arguments.

Examples that illustrate the different options are depicted below:

```

1 \begin{cvInterests}
2   \cvInterestsPersonal
3   \cvInterest{\faTrain}{model trains}
4   \cvInterest{\faFlask}{(applied) sciences}
5   \cvInterest{\faSuitcase}{travelling}
6   \cvInterestsProfessional
7   \cvInterest{\faGraduationCap}{machine learning}
8   \cvInterest{\faCogs}{robotics}
9 \end{cvInterests}

1 \begin{cvInterests}[short]
2   \cvInterestsPersonal
3   \cvInterest{\faTrain}{model trains}
4   \cvInterest{\faFlask}{(applied) sciences}
5   \cvInterest{\faSuitcase}{travelling}
6   \cvInterest{\faCamera}{photography}
7   \cvInterest{\faGamepad}{gaming}
8   \cvInterest{\faMusic}{music}
9 \end{cvInterests}

```

`cvProjects` If you have interesting (side) projects that are relevant for your CV, you can list them using the `cvProjects` environment. Inside this environment you can use the `\cvProject[<options>]{<name>}{<description>}` macro to list all your projects. The only options currently allowed in `<options>` are an image (using `image`) and a URL (using `link`). This image must be an external file and the user must handle its size through `width` or `height`. Example usage:

```

1 \begin{cvProjects}
2   \cvProject[image=clock, width=1cm]{yanic}{An IoT nixie
   clock.}
3   \cvProject{\texttt{limecv}}{A \LaTeX\ document class
   for curriculum vit\ae.}
4 \end{cvProjects}

```

It is currently not possible to extend the sidebar with additional environments. To add your own, look at the source code and create your own L<sup>A</sup>T<sub>E</sub>X-style hack.

## 5 Main Content

The main content section includes details on your education, experience, skills, references and more. Several environments have been designed to suit specific needs. These will be discussed next.

**cvMainContent**

Everything in the main content section should be encapsulated in the `cvMainContent` environment. This environment defines four new environments: `cvEducation`, `cvExperience`, `cvSkills` and `cvReferences`. These four environments are self explanatory in terms of functionality. We will detail each of these environments.

Note that `cvMainContent` also has a starred variant (`cvMainContent*`). The function is similar to `cvSidebar*`, in the sense that it places everything to the left instead of the default right location.

**cvEducation**

The education environment creates a timeline styled list of your education. Individual education items should be listed by means of the `\cvItem{<details>}` macro which is available within this environment. Instead of forcing a specific layout structure, it was preferred to leave the actual mark-up to the end user. *All* information concerning a single education should be passed to this single argument. However, the user is always welcome to create his own styling macro that takes multiple arguments. This is illustrated by the examples below.

Listing 1: `cvEducation` *without* special user mark-up command.

```

1 \begin{cvEducation}
2   \cvItem{Evening class: Chinese\\
3     Some School, City. September 2015 -- June 2016\\
4     Achieved A2 language skill in Chinese (Mandarin).}
5   \cvItem{Bachelor of Science in Biochemistry and
   Biotechnology\\
6     University, City. September 2009 -- June 2012\\
7     General training in the basic sciences and the
     molecular life science.}
8   \cvItem{Master of Science in Biochemistry and
   Biotechnology\\
9     University, City. September 2012 -- June 2015\\
10    Acquisition of insight into and knowledge of
      possibilities for application in the area

```

```

11     of biochemistry and biotechnology, specific with
12         applications in biomedical application
13     and due problem-solving reasoning skills.}
13 \end{cvEducation}

```

Listing 2: `cvEducation` with special user mark-up command.

```

1 % in preamble:
2 \newfontfamily\firaMedium{Fira Sans Medium}
3 \NewDocumentCommand{\cvEducation}{m}{\firaMedium
4 #1}\#2\emph{#3}
4 % in document:
5 \begin{cvEducation}
6     \cvItem{\cvEducation{Evening class: Chinese}%
7             {Some School, City. September 2015 -- June
8                 2016}%
9             {Achieved A2 language skill in Chinese (
10                Mandarin).}}
10    \cvItem{\cvEducation{Bachelor of Science in
11        Biochemistry and Biotechnology}%
12            {University, City. September 2009 -- June
13                2012}%
14            {General training in the basic sciences and
15                the molecular life science.}}
12    \cvItem{\cvEducation{Master of Science in Biochemistry
13        and Biotechnology}%
14            {University, City. September 2012 -- June
15                2015}%
16            {Acquisition of insight into and knowledge
17                of possibilities for application
                in the area of biochemistry and
                biotechnology, specific with
                applications
                in biomedical application and due problem-
                solving reasoning skills.}}
17 \end{cvEducation}

```

`cvExperience` `cvExperience` works very similar to `cvEducation`. It follows the exact same structure and has the same design philosophy where you should use `\cvItem` inside this environment to typeset the individual items in a timeline style. Listing 3 illustrates this with an example.

Listing 3: `cvExperience` code example.

```

1 \begin{cvExperience}
2     \cvItem{Student Job\%
3         \textsc{\selectfont Company X}, Location X. Summer
2010\%

```

```

4     Integer tincidunt dapibus consectetur. Nullam
      tristique aliquam luctus. Sed ut ante velit.
5     Nulla pharetra maximus lacus at elementum.
      Suspendisse sodales consectetur metus, sit amet
6     ultricies ipsum ultrices ut.};
7     \cvItem{Internship\\
8       \textsc{Company Y}, Location Y. June 2012 -- August
         2012\\
9       Lorem ipsum dolor sit amet, consectetur adipiscing
         elit. Morbi dictum cursus sapien, id
10      eleifend mi pellentesque id. Etiam lobortis eu odio
         a sodales. Phasellus ut dolor feugiat,
11      lacinia lectus in, blandit metus. Fusce lacinia
         dolor et metus gravida pulvinar sit amet
12      et ex.};
13     \cvItem{Internship\\
14       \textsc{Company Z}, Location Z. August 2014 --
         September 2014\\
15       Lorem ipsum dolor sit amet, consectetur adipiscing
         elit. Morbi dictum cursus sapien, id
16      eleifend mi pellentesque id. Etiam lobortis eu odio
         a sodales. Phasellus ut dolor feugiat,
17      lacinia lectus in, blandit metus. Fusce lacinia
         dolor et metus gravida pulvinar sit amet
18      et ex. Suspendisse vestibulum, leo malesuada
         molestie maximus, sem risus ornare elit, vitae
19      sodales felis elit in ipsum.};
20 \end{cvExperience}

```

**cvSkills** The skills section is contained within the `cvSkills` environment. This environment typesets your skills on a 5-level (discrete) scale. These are divided into two columns. To that end, two macros are available: `cvSkillOne` and `cvSkillTwo`.

**cvSkillTwo** `cvSkillTwo{\langle skill level\rangle}{\langle skill\rangle}{\langle skill level\rangle}{\langle skill\rangle}` typesets a row of two skills. If you have an odd number of items, `cvSkillOne{\langle skill level\rangle}{\langle skill\rangle}` should be used. An example of a skill-list can be found in listing 4.

Listing 4: Illustration of the `cvSkills` environment.

```

1 \begin{cvSkills}
2   \cvSkillTwo{5}{MATLAB}{5}{\LaTeX}
3   \cvSkillTwo{4}{Python}{4}{VHDL}
4   \cvSkillTwo{4}{Microsoft Office}{4}{macOS}
5   \cvSkillOne{3}{C, C++}
6 \end{cvSkills}

```

**cvReferences** The final section is intended to list all your references. These go inside the `cvReferences` environment. The enumeration of the different items should be done using the `\cvAddReference{\langle information\rangle}` macro. The follow-

ing keys are available: `name`, `company`, `job`, `address line 1`, `address line 2`, `address line 3`, `mobile phone`, `work phone` and `email`. These are all optional arguments and will be typeset consistently between the two references per row. When adding two references, the left one should be specified first using `\cvAddReference*`. This will store the values and typeset them when adding the second reference through `\cvAddReference`. Note that `\cvAddReference` should be used if only one reference needs to be typeset. Listing 5 illustrates the usage of this environment.

*Important remark:* the comment after the usage of `\cvAddReference` is required! Otherwise, spacing will not be as intended.

Listing 5: `cvReferences` code example.

```

1 \begin{cvReferences}
2   \cvAddReference{%
3     name=Jane Smith,
4     company=Company ABC Co.\ Ltd.,
5     job=Job title,
6     address line 1=Street lane 2,
7     address line 2=B-1150 Brussels,
8     mobile phone=+1 781 555 1212}%
9 \end{cvReferences}

```

## 6 Cover Letter

A final (optional) part of a CV is the cover letter. This is a fairly simple part to create design wise, but probably the hardest to write in an actual CV.

- `cvCoverLetter` The cover letter environment is `cvCoverLetter` and contains all the cover letter details. It will automatically add a header with your name and position based on the information filled in in `\cvID`.
- `\cvBeneficiary` The `\cvBeneficiary{\langle options \rangle}` macro offers a convenience wrapper to typeset the beneficiary. Possible options are `name`, `position`, `company`, `address line 1`, `address line 2` and `address line 3`. The remainder of the cover letter design is up to the user. An example design can be found in listing 6.
- `\cvFullName` `\cvFullName` typeset the authors name based on the data provided in `cvID`.

Listing 6: `cvCoverLetter` code example.

```

1 \section{Cover Letter}
2
3 \begin{cvCoverLetter}
4
5 \cvBeneficiary{%
6   name=Jane Smith,
7   position=Position,
8   company=Company,
9   address line 1=Address line 1,

```

```

10     address line 2=Address line 2}

11
12 Dear Miss.\ Smith
13
14 \vspace{\baselineskip}
15 \lipsum[1-3]
16 \vspace{\margin}
17
18 \cvFullName
19
20 \end{cvCoverLetter}

```

## 7 Change Style and Layout

To change the style, one can redefine the colours, lengths and TikZ styles used throughout the document class.

By default the following colours are defined:

- `cvGreen` default dark green colour (hex value: `357F2D`)
- `cvGreenLight` light green colour, for larger shapes and backgrounds (hex value: `B8E4B3`)
- `cvDark` default text colour (hex value: `2F3142`)
- `cvRed` currently not used (hex value: `7F2D35`)
- `cvAccent` lighter grey shade for accented text (hex value: `474A65`)

To change these, use the code from listing 7 in the preamble:

Listing 7: Colour editing.

```
1 \definecolor{cvDark}{HTML}{000000}
```

By overwriting the following styles, one can change the appearance of multiple TikZ nodes. The following styles are available.

- `interesticon`
- `interesttext`
- `eventdottext`
- `invisibletimedot`
- `timedot`
- `eventdot`
- `contactIcon`

- `contactText`
- `headerIcon`
- `skillLevel`
- `languageText`
- `skillText`
- `progressArea`
- `progressBar`
- `sectionTitle`
- `sectionEduText`

Adding your own styles is easy with the code from listing 8.

Listing 8: Change TikZ style.

```

1 \tikzset{
2   interesticon/.style = {},
3 }
```

Spacing used inside the document can also be modified by the user. The following lengths have been defined:

- `\cvColSep` Distance between columns of `cvSkills`. Default value: `1cm`.
- `\cvNodeSep` Not used currently. Default value: `0.75cm`.
- `\cvTimeDotDiameter` Size of the dots in a timeline. Default value: `3pt`.
- `\cvMargin` Margin around the entire page. Default value: `1cm`.
- `\cvSideWidth` Width of the sidebar. Default value: `0.3\paperwidth-\cvMargin`.
- `\cvMainWidth` Width of the main content section. Default value: `\paperwidth-4\cvMargin-\cvSideWidth`.
- `\cvTimeDotSep` Distance between timeline dot and text. Default value: `0.4cm`.
- `\cvStartEndSep` Not used. Default value: `0.3cm`.
- `\cvItemSep` Distance between `cvItem` entries. Default value: `0.4cm`.
- `\cvTableSepWidth` Distance between two columns of `cvReferences` environment. Default value: `0.3cm`.
- `\cvCoverLetterHeight` Height of the coloured bar at the top of the cover letter. Default value: `\cvSideWidth`.

- `\cvCoverLetterWidth` Width of the cover letter text. This can be used to improve to layout. Default value: `\cvMainWidth+3\cvMargin`.
- `\cvPictureWidth` Diameter of the profile picture. Default value: `4cm`.
- `\cvProgressAreaWidth` Length of a progress bar for the languages section. Default value: `5em`.
- `\cvProgressAreaHeight` Height of a progress bar for the languages section. Default value: `0.75em`.
- `\cvSectionSep` Distance between sections of the main content section. Default value: `0.6cm`.
- `\cvSectionSBSep` Distance between sections of the sidebar section. Default value: `4pt`.
- `\cvTitleLineWidth` Line width of horizontal line below section title. Default value: `2pt`.
- `\cvTitleLineSpacing` Distance from bottom of the titles of the main content section to the horizontal centre of line. Default value: `0.1cm`.
- `\cv@projectSep` Internal length. Automatically set to `\cvItemSep`.
- `\cvProjectDetailsSep` Internal spacing between details of a single project. Default value: `0.2cm`.
- `\cvInterestDetailsSep` Distance between items in case the `long` options is used for the `cvInterests` environment. Default value: `4pt`.
- `\cvContactItemSep` Distance between items in the `cvContact` environment. Default value: `5pt`.
- `\cvCoverLetterLineWidth` Line width of line below cover letter name. Default value: `3pt`.
- `\cvCoverLetterPositionSpacing` Distance between name and position in the cover letter. Default value: `10pt`.
- `\cvSBSectionLineWidth` Line width of left and right lines next to the titles of in the sidebar. Default value: `1pt`.
- `\cvCoverLetterLineSpacing` Distance between name and line below it in the cover letter. Default value: `0pt`.
- `\cvIDNameSep` Distance between first and last name. Default value: `0.1cm`.
- `\cvPositionSep` Distance before and after the position. Default value: `0.5cm`.
- `\cvSkillSep` Distance between skills. Default value: `1ex`.

- `\cvHeaderIconWidth` Automatically set, currently has no visible effect on document. Default value: `0pt`.

The fonts can also be changed, either by using the `sansfont` and `monofont` class options, or by using the default ways provided by L<sup>A</sup>T<sub>E</sub>X, XeLaTeX and LuaLaTeX. Note that the `fontspec` package is already loaded by the class, so you can directly use `\setmainfont` in the preamble if you are using the XeLaTeX or LuaLaTeX engine.

## 8 Example

The source code of a typical CV document can be found in the examples folder. Figures 2 and 3 depict the resulting PDF documents.

## 9 Implementation
