

Non-Floating Margin Notes with `marginnote` Package*

Markus Kohm[†]

2008/11/10

Abstract

In \LaTeX the command `\marginpar[⟨left⟩]{⟨right⟩}` might be used to create a note in the margin. But there is a problem with this command: it creates a special kind of float. For this it cannot be used e.g. at floats or footnotes. Package `marginnote` supports another command `\marginnote` to create notes in the margin. This does not use a kind of float and for this does not have the disadvantage of `\marginpar`. But there might be other problems ...

1 How to Use `marginnote` Package

First of all you have to load. You may use:

```
\usepackage{marginnote}
```

to do so.

```
\marginnote
```

The command `\marginnote[⟨left⟩]{⟨right⟩}[⟨voffset⟩]` may be used to set a margin note using `marginnote`. The first optional argument and the mandatory argument are same using `\marginpar` from the \LaTeX kernel. Even `\reversemarginpar` will be considered. The note `⟨left⟩` or `⟨right⟩` will be put at the current vertical position. Second optional argument `⟨voffset⟩` may be used to adjust the vertical position of the margin note. Use a negative dimension to move it up or a positive dimension to move it down.

```
\marginnoteleftadjust
```

```
\marginnoterightadjust
```

At some environments, e.g. `framed` from the `framed` package the horizontal placement of the margin notes are not correct. In this case you may redefine `\marginnoteleftadjust` and `\marginnoterightadjust` to fix this. Note that these are macros not lengths! So you have to use `\renewcommand`, `\def` or `\let` to change them. You may e.g. use

```
\begingroup
```

*This file has version number v1.1a, last revised 2008/11/10.

[†]Email: komascript@gmx.info

```

\makeatletter
\g@addto@macro\framed{%
  \let\marginnoteleftadjust\FrameSep
  \let\marginnoterightadjust\FrameSep
}
\endgroup

```

at your preamble after loading package `framed` to fix the problem using `framed` environment.

NOTE: `\marginnoteleftadjust` and `\marginnoterightadjust` will be used only, if the correct horizontal position cannot be determined using PDF_TE_X features (`\pdfsavepos` and `\pdflastxpos`). So if you are using PDF_LA_TE_X with PDF output or PDF_LA_TE_X with PDF_TE_X-version since 1.40 you will not need to use the example code above, but you will need at least two PDF_LA_TE_X runs to get the correct horizontal positions of the margin notes.

`\marginnotetextwidth` Package `marginnote` needs to know the real width of the type area to find the right margin. While some environments (e.g. those of package `framed`) change `\textwidth`, `marginnote` defines its own text width macro. If you change type area after `\begin{document}` you should add

```
\edef\marginnotetextwidth{\the\textwidth}
```

after changing the type area. Maybe you should do this globally using `\xdef` instead of `\edef`. Most users will never need to change `\marginnotetextwidth`.

`\marginnotevadjust` At some environments the vertical adjustment of the margin note will be wrong, e.g. one base line to low. In this case you may use the additional optional argument of `\marginnote` at every usage of `\marginnote` or redefine `\marginnotevadjust` at the begin of the environment. The default definition is `0pt`.

`\raggedleftmarginnote` `\raggedrightmarginnote` These macros define how the margin note will be aligned. The defaults are:

- align margin notes at the left margin right to the margin,
- align margin notes at the right margin left to the margin.

You may change this using `\renewcommand`, e.g. use

```

\renewcommand*\raggedleftmarginnote{}
\renewcommand*\raggedrightmarginnote{\centering}

```

to get justified text at the left and centered text at the right margin.

`\marginfont` This macro defines the font that will be used to set margin notes. The default is `\normalcolor`. You may use `\renewcommand` to change this, e.g. use

```
\renewcommand*\marginfont{\color{red}\sffamily}
```

to get red colored margin notes in sans serif font family. You need to load e.g. package `color` to use `\color`.

2 Known Problems Using `marginnote`

At double side layout (e.g. using class option `twoside`) `\marginnote` needs to know the number of the current page to decide whether the page is odd or even and so whether to use left or right margin. \LaTeX uses an asynchronous output. Because of this counter `page` should not be used to get the number of the current page unless you are at page head or foot. To solve the problem `marginnote` uses a mechanism similar to labels. But this means, that the correct margin won't be known at this \LaTeX run but only at the next. So after adding or deleting a margin note or after each change of page break you need two \LaTeX runs to get all margins right.

The command `\marginnote` uses `\strut` and `\vadjust` to put the margin note at the correct position. But under some circumstances this may fail. You may adjust the vertical position of the margin note using the second optional argument of `\marginnote`. Sometimes even the text outside `\marginnote` will be moved because of using `\marginnote`. There's currently no other solution for this problem than moving the `\marginnote` command.

Note: The margin note will be placed at the current vertical line. This means, if you are using two `\marginnote` commands at the same line, they will be put on the same place. This is not a bug but a feature!

No page break may occur inside a margin note created with `\marginnote`.

`\marginnote` somewhat different from `\marginpar` if used immediately after `\item`. This is not a bug, it's a feature!

With math `\marginnote` may work or may not depending on the math environment.

If you are using PDF \LaTeX since version 1.40 or PDF \LaTeX before version 1.40 with PDF output and the horizontal position of a margin note is wrong, do one more PDF \LaTeX run.

Sometimes lines are stretched vertically using `\marginnote`, e.g. if you're using `\marginnote` at a list *and* upper case umlauts like "Ü". In this case `\lineskiplimit=-\maxdimen` should help.

You should not use `\marginnote` at the optional argument of `\item`.

3 Implementation

First declare and process the options.

`\if@mn@verbose` Use verbose output mode by default. But you may change this using option `quiet`.

```
1 \newif\if@mn@verbose\@mn@verbostrue
2 \DeclareOption{verbose}{\@mn@verbostrue}
3 \DeclareOption{quiet}{\@mn@verbosefalse}

4 \ExecuteOptions{verbose}
5 \ProcessOptions\relax
```

`\newmarginnote` We need a macro to define a new note at the aux file. This will be done using the mechanism of \LaTeX that is used for `\newlabel`. But we use another prefix. This

will result in the usual “Labels(s) may have changed. Rerun to get cross-references right.” if a margin note is new or have moved to another page.

```
6 \newcommand*{\newmarginnote}{\@newl@bel{mn}}
```

`\if@mn@pdfmode` We need to know, whether or not PDF_T_E_X and which version of PDF_T_E_X is used. With PDF_T_E_X the horizontal output position may be detected using `\pdfsavepos` and `\pdflastxpos`. So the relative position of the margin may be calculated. Without PDF_T_E_X only manual adjustment is available. While PDF mode or not may change before start of the document, setting up the switch is delayed.

```
7 \newif\if@mn@pdfmode\@mn@pdfmodefalse
8 \AtBeginDocument{%
9   \begingroup\expandafter\expandafter\expandafter\endgroup
10  \expandafter\ifx\csname pdflastxpos\endcsname\relax\else
11    \expandafter\ifx\csname pdftexversion\endcsname\relax
12      \begingroup\expandafter\expandafter\expandafter\endgroup
13      \expandafter\ifx\csname pdfoutput\endcsname\relax\else
14        \ifcase\pdfoutput\else\@mn@pdfmodetrue\fi
15      \fi
16    \else
17      \ifnum \pdftexversion<140
18        \begingroup\expandafter\expandafter\expandafter\endgroup
19        \expandafter\ifx\csname pdfoutput\endcsname\relax\else
20          \ifcase\pdfoutput\else\@mn@pdfmodetrue\fi
21        \fi
22      \else
23        \@mn@pdfmodetrue
24      \fi
25    \fi
26  \if@mn@verbose
27    \if@mn@pdfmode
28      \PackageInfo{marginnote}{%
29        \string\pdfoutput\space not 0 and \string\pdflastxpos\space
30        available.\MessageBreak
31        Extended position detection mode activated\@gobble
32      }%
33    \else
34      \PackageInfo{marginnote}{%
35        either \string\pdflastxpos\space or \string\pdfoutput\space not
36        available\MessageBreak
37        or \string\pdfoutput\space set to 0.\MessageBreak
38        Extended position detection mode deactivated\@gobble
39      }%
40    \fi
41  \fi
42 }
```

`\marginnotetextwidth` Some environments change `\textwidth`. But at PDF mode we need to know the real text width to find the right margin. So we use our own text width macro.

Sometimes it may be usefull if the user can set it up. Because of this it is a user command.

```
43 \newcommand*\marginnotetextwidth{}
44 \let\marginnotetextwidth\textwidth
45 \AtBeginDocument{\if@mn@pdfmode\edef\marginnotetextwidth{\the\textwidth}\fi}
```

`\@mn@margintest` Macro `\@mn@margintest` does the complete test, which margin to use. The result
`\@mn@thispage` may be found at `\if@tempswa`. To avoid changes on the last page if there is a
`\@mn@atthispage` new note on the first page, try to count the notes by page. We know that this
`\@mn@currpage` can not be successfull, but never the less it may be a good try. `\@mn@thispage`
`\@mn@currxpos` saves the page number of the last usage of `\@mn@margintest`. `\@mn@atthispage`
`mn@abspage` saves the number of margin note at this page. But we need to know the absolut
page number to do this. So we increase the absolut page number `mn@abspage` at
every `\@outputpage`. `\@mn@currpage` is the page from the page label if found.
`\@mn@currxpos` is somehow special. Using PDF_TE_X the real x position may be
written with the page label and used to calculate the correct horizontal offset.
In this case `\marginnoteleftadjust` and `\marginnoterightadjust` will not be
used!

```
46 \newcommand*\@mn@thispage{}
47 \newcommand*\@mn@currpage{}
48 \newcommand*\@mn@currxpos{}
49 \newcounter{mn@abspage}
50 \AtBeginDocument{\setcounter{mn@abspage}{1}}%
51 \g@addto@macro\@outputpage{\stepcounter{mn@abspage}}
52 \newcommand*\@mn@margintest}{%

```

All changes (but change of counters that are global because of using the L^AT_EX commands to change them an `\gdef` and `\xdef`) should be local. In h-mode a `\strut` will be used to fix base line. The margin note will be put to vertical list using `\vadjust`. This also means that we are one line to deep. This will be corrected later using negative kern. In v-mode we use a special kind of vbox to simply set everything. Math mode should behave like v-mode. And if we are just after an item we have to leave v-mode first.

```

`\marginnoterightadjust` These may be used to define an automatic horizontal adjust. The default is zero.
`\marginnoteleftadjust` They will be used only if not PDF_TE_X or PDF_TE_X before version 1.40 in DVI mode is used, because in this case the save position features are not available.

```

256 \newcommand*\marginnoterightadjust{}
257 \newcommand*\marginnoteleftadjust{}
258 \let\marginnoterightadjust\z@
259 \let\marginnoteleftadjust\z@

```

`\marginnotevadjust` This may be used to define an automatic vertical adjust. The default is zero. Values greater than zero will move the margin note down, values less than zero will move the margin note up.

```

260 \newcommand*\marginnotevadjust{}
261 \let\marginnotevadjust\z@

```

`\mn@vlap` This macro is used to set a vertical box without size at vertical mode.

```

262 \newcommand{\mn@vlap}[1]{%
263   \setbox\@tempboxa\vbox to \ht\strutbox{#1\vss}%
264   \box\@tempboxa\vskip-\baselineskip
265 }

```

`\marginfont` These are very simple. A class may also define `\marginfont`. Use this if available.
`\raggedleftmarginnote` I don't use `\let` for the definitions of the ragged macros, so the meaning may
`\raggedrightmarginnote` change loading e.g. package `ragged2e`.

```

266 \providecommand*\marginfont{}
267 \newcommand*\raggedleftmarginnote{\raggedleft}
268 \newcommand*\raggedrightmarginnote{\raggedright}

```
