The mdframed package

 $Examples \ for \ {\tt framemethod=default}$

Marco Daniel	1.6d	2012/09/21
--------------	------	------------

In this document I collect various examples for framemethod=default. Some presented examples are more or less exorbitant.

Contents

1	Loading	1	Example 4 – framed picture which is	
			$centered \dots \dots \dots \dots \dots \dots \dots \dots \dots$	3
2	Examples	1	Example 5 – Theorem environments \cdot .	4
	Example 1 – very simple	2	Example 6 – theorem with separate header and the help of TikZ (com-	
	Example 2 – hidden line + frame title	2	plex)	5
	Example 3 – colored frame title	3	Example 7 – hide only a part of a line	6

1 Loading

In the preamble only the package mdframed with the option framemethod=default is loaded. All other modifications will be done by \mdfdefinestyle or \mdfsetup.

Note

Every \global inside the examples is necessary to work with the package showexpl.

2 Examples

All examples have the following settings:

```
\label{eq:skipabove} $$ \ \frac{skipabove}{ExampleText} % $$ An \textit{inhomogeneous linear} differential equation has the form $$ begin{align} L[v] = f, $$ end{align} $$ where $L$ is a linear differential operator, $v$ is the dependent variable, and $f$ is a given non-zero function of the independent variables alone. $$ $$ end{align} $$ end{align} $$ the dependent variable and $f$ end{align} $$ end{align}
```

Example 1 – very simple

```
\global\mdfdefinestyle{exampledefault}{%
linecolor=red,linewidth=3pt,%
leftmargin=1cm,rightmargin=1cm
}
\begin{mdframed}[style=exampledefault]
\ExampleText
\end{mdframed}
```

An *inhomogeneous linear* differential equation has the form

$$L[v] = f, (1)$$

where L is a linear differential operator, v is the dependent variable, and f is a given non-zero function of the independent variables alone.

Example 2 – hidden line + frame title

```
\global\mdfapptodefinestyle{exampledefault}{%
topline=false,bottomline=false}
\begin{mdframed}[style=exampledefault,frametitle={Inhomogeneous linear}]
\ExampleText
\end{mdframed}
```

Inhomogeneous linear

An inhomogeneous linear differential equation has the form

$$L[v] = f, (2)$$

Example 3 – colored frame title

```
\global\mdfapptodefinestyle{exampledefault}{%
    rightline=true,innerleftmargin=10,innerrightmargin=10,
    frametitlerule=true,frametitlerulecolor=green,
    frametitlebackgroundcolor=yellow,
    frametitlerulewidth=2pt}
\begin{mdframed}[style=exampledefault,frametitle={Inhomogeneous linear}]
\ExampleText
\end{mdframed}
```

Inhomogeneous linear

An inhomogeneous linear differential equation has the form

$$L[v] = f, (3)$$

where L is a linear differential operator, v is the dependent variable, and f is a given non-zero function of the independent variables alone.

Example 4 – framed picture which is centered

Example 5 – Theorem environments

```
\mathbf{definestyle}
      linecolor=red,linewidth=2pt,%
      frametitlerule=true,%
      frametitlebackgroundcolor=gray!20,
      innertopmargin = \topskip,
   }
\mdtheorem[style=theoremstyle]{definition}{Definition}
\mathbf{begin} \{ \mathbf{definition} \}
ExampleText
\mathbf{definition}
begin{definition}[Inhomogeneous linear]
ExampleText
\mathbf{end}
\begin{definition*}[Inhomogeneous linear]
ExampleText
\end{definition*}
```

Definition 1

An inhomogeneous linear differential equation has the form

$$L[v] = f, (4)$$

where L is a linear differential operator, v is the dependent variable, and f is a given non-zero function of the independent variables alone.

Definition 2: Inhomogeneous linear

An inhomogeneous linear differential equation has the form

$$L[v] = f, (5)$$

where L is a linear differential operator, v is the dependent variable, and f is a given non-zero function of the independent variables alone.

Definition: Inhomogeneous linear

An inhomogeneous linear differential equation has the form

$$L[v] = f, (6)$$

```
Example 6 – theorem with separate header and the help of TikZ (complex)
```

```
\ensuremath{\mathsf{newcounter}{\mathsf{theo}}}
\newenvironment{theo}[1][]{\%}
 \mathsf{stepcounter}{\mathsf{theo}}\%
   \{ \text{ifstrempty} \{ \#1 \} \% \}
  \{ \mathbf{M} \in \mathcal{M} \}
      frametitle = \{\%
           \tikz[baseline=(current bounding box.east),outer sep=0pt]
             \node[anchor=east,rectangle,fill=blue!20]
            {\strut Theorem~\thetheo};}}
  }%
  \{ \mathbf{M} 
       frametitle={%
           \tikz[baseline=(current bounding box.east),outer sep=0pt]
            \node[anchor=east,rectangle,fill=blue!20]
            \{ \mathbf{strut} \text{ Theorem}^{\mathrm{thetheo}}, \#1 \}; \} \} \%
    }%
    \mdfsetup{innertopmargin=10pt,linecolor=blue!20,%
                    linewidth=2pt,topline=true,

\ExampleText
\mathbf{end}
```

Theorem 1: Inhomogeneous Linear

An inhomogeneous linear differential equation has the form

$$L[v] = f, (7)$$

where L is a linear differential operator, v is the dependent variable, and f is a given non-zero function of the independent variables alone.

Theorem 2

An *inhomogeneous linear* differential equation has the form

$$L[v] = f, (8)$$

Example 7 – hide only a part of a line

The example below is inspired by the following post on StackExchange Theorem decorations that stay with theorem environment

```
\makeatletter
 \mathbf{e} 
 \mathbf{vert} 
          \setminus \operatorname{color} \{ \#1 \} \%
        \label{eq:linear} \
                                                      {\mathbf wdf@middlelinewidth@length}\%
                                                     {\operatorname{dimexpr}}_{\operatorname{mdf}} \longrightarrow {\operatorname{dimexpr}}_{\operatorname{mdf}} \longrightarrow {\operatorname{mdf}}_{\operatorname{mdf}} \longrightarrow \operatorname{mdf}} \longrightarrow {\operatorname{mdf}}_{\operatorname{mdf}} \longrightarrow {\operatorname{mdf}}_{\operatorname{mdf}} \operatorname{mdf}} \longrightarrow \operatorname{mdf}}_{\operatorname{mdf}} \longrightarrow {\operatorname{mdf}}_{\operatorname{mdf}} \operatorname{mdf}} \longrightarrow {\operatorname{mdf}}_{\operatorname{mdf}} \operatorname{mdf}} \operatorname{mdf}} \operatorname{mdf}} \operatorname{mdf}} \operatorname{mdf}} \operatorname{mdf}} \operatorname{mdf
