

The `mdframed` package

Examples for `framemethod=default`

Marco Daniel

1.8

2013/03/09

In this document I collect various examples for `framemethod=default`. Some presented examples are more or less exorbitant.

Contents

1 Loading	1	Example 4 – framed picture which is centered	3
2 Examples	1	Example 5 – Theorem environments	4
Example 1 – very simple	2	Example 6 – theorem with separate header and the help of TikZ (complex)	5
Example 2 – hidden line + frame title	2	Example 7 – hide only a part of a line	6
Example 3 – colored frame title	3		

1 Loading

In the preamble only the package `mdframed` with the option `framemethod=default` is loaded. All other modifications will be done by `\mdfdefinestyle` or `\mdfsetup`.

Note

Every `\global` inside the examples is necessary to work with the package `showexpl`.

2 Examples

All examples have the following settings:

```
\mdfsetup{skipabove=\topskip,skipbelow=\topskip}
\newrobustcmd{\ExampleText}{%
An \textit{inhomogeneous linear} differential equation
has the form
\begin{align}
L[v] = f,
\end{align}
where $L$ is a linear differential operator, $v$ is
the dependent variable, and $f$ is a given non-zero
function of the independent variables alone.
}
```

Example 1 – very simple

```
\global\mdfdefinestyle{exampledefault}{%
    linecolor=red,linewidth=3pt,%
    leftmargin=1cm,rightmargin=1cm
}
\begin{mdframed}[style=exampledefault]
\ExampleText
\end{mdframed}
```

An *inhomogeneous linear* differential equation has the form

$$L[v] = f, \quad (1)$$

where L is a linear differential operator, v is the dependent variable, and f is a given non-zero function of the independent variables alone.

Example 2 – hidden line + frame title

```
\global\mdfapptodefinestyle{exampledefault}{%
    topline=false,bottomline=false
}
\begin{mdframed}[style=exampledefault,frametitle={Inhomogeneous linear}]
\ExampleText
\end{mdframed}
```

Inhomogeneous linear

An *inhomogeneous linear* differential equation has the form

$$L[v] = f, \quad (2)$$

where L is a linear differential operator, v is the dependent variable, and f is a given non-zero function of the independent variables alone.

Example 3 – colored frame title

```
\global\mdfapptodefinestyle{exampledefault}{%
    rightline=true,innerleftmargin=10,innerrightmargin=10,
    frametitlerule=true,frametitlerulecolor=green,
    frametitlebackgroundcolor=yellow,
    frametitlerulewidth=2pt}
\begin{mdframed}[style=exampledefault,frametitle={Inhomogeneous linear}]
\ExampleText
\end{mdframed}
```

Inhomogeneous linear

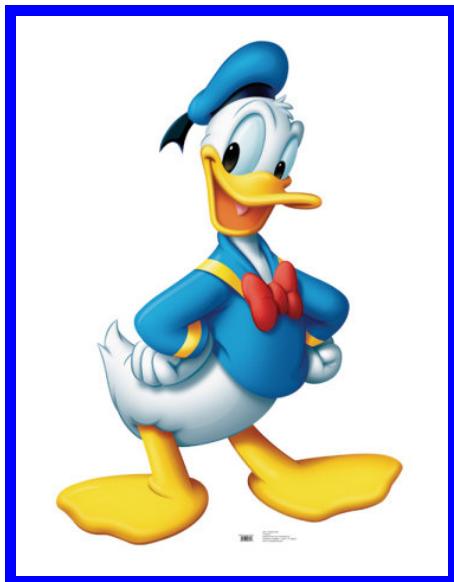

An *inhomogeneous linear* differential equation has the form

$$L[v] = f, \quad (3)$$

where L is a linear differential operator, v is the dependent variable, and f is a given non-zero function of the independent variables alone.

Example 4 – framed picture which is centered

```
\begin{mdframed}[userdefinedwidth=6cm,align=center,
    linecolor=blue,linewidth=4pt]
\IfFileExists{donald-duck.jpg}%
{\includegraphics[width=\linewidth]{donald-duck}}%
{\rule{\linewidth}{4cm}}
\end{mdframed}
```

Example 5 – Theorem environments

```
\mdfdefinestyle{theoremstyle}{%
    linecolor=red, linewidth=2pt,%
    frametitlerule=true,%
    frametitlebackgroundcolor=gray!20,%
    innertopmargin=\topskip,%
}
\mdtheorem[style=theoremstyle]{definition}{Definition}
\begin{definition}
\ExampleText
\end{definition}
\begin{definition}[Inhomogeneous linear]
\ExampleText
\end{definition}
\begin{definition*}[Inhomogeneous linear]
\ExampleText
\end{definition*}
```

Definition 1

An *inhomogeneous linear* differential equation has the form

$$L[v] = f, \quad (4)$$

where L is a linear differential operator, v is the dependent variable, and f is a given non-zero function of the independent variables alone.

Definition 2: Inhomogeneous linear

An *inhomogeneous linear* differential equation has the form

$$L[v] = f, \quad (5)$$

where L is a linear differential operator, v is the dependent variable, and f is a given non-zero function of the independent variables alone.

Definition: Inhomogeneous linear

An *inhomogeneous linear* differential equation has the form

$$L[v] = f, \quad (6)$$

where L is a linear differential operator, v is the dependent variable, and f is a given non-zero function of the independent variables alone.

Example 6 – theorem with separate header and the help of TikZ (complex)

```
\newcounter{theo}[section]
\newenvironment{theo}[1][]{%
\stepcounter{theo}%
\ifstrempy{\#1}{%
\mdfsetup{%
frametitle={%
\tikz[baseline=(current bounding box.east),outer sep=0pt]{%
\node[anchor=east,rectangle,fill=blue!20]{\strut Theorem \thetheo};}}}
}%
\mdfsetup{%
frametitle={%
\tikz[baseline=(current bounding box.east),outer sep=0pt]{%
\node[anchor=east,rectangle,fill=blue!20]{\strut Theorem \thetheo:\#\!1};}}}
}%
\mdfsetup{innertopmargin=10pt,linecolor=blue!20,%
 linewidth=2pt,topline=true,
 frametitleaboveskip=\dimexpr-\ht\strutbox\relax,%
 \begin{mdframed}[]\relax%
 }{\end{mdframed}}
\begin{theo}[Inhomogeneous Linear]
\ExampleText
\end{theo}

\begin{theo}
\ExampleText
\end{theo}
```

Theorem 1: Inhomogeneous Linear

An *inhomogeneous linear* differential equation has the form

$$L[v] = f, \quad (7)$$

where L is a linear differential operator, v is the dependent variable, and f is a given non-zero function of the independent variables alone.

Theorem 2

An *inhomogeneous linear* differential equation has the form

$$L[v] = f, \quad (8)$$

where L is a linear differential operator, v is the dependent variable, and f is a given non-zero function of the independent variables alone.

Example 7 – hide only a part of a line

The example below is inspired by the following post on StackExchange [Theorem decorations that stay with theorem environment](#)

```
\makeatletter
\newlength{\interruptlength}
\newrobustcmd{\interruptrule}[3]{%
  \color{#1}%
  \hspace*{\dimexpr\mdfboundingboxwidth+\mdf@innerrightmargin@length\relax}%
  \rule[\dimexpr-\mdfboundingboxdepth+\#2\interruptlength\relax]{%
    \mdf@middelinewidth@length}{%
    \dimexpr\mdfboundingboxtotalheight-\#3\interruptlength\relax}%
}
\newrobustcmd{\overlaplines}[2][white]{%
  \mdfsetup{everyline=false}%
  \setlength{\interruptlength}{#2}%
  \appto{\mdf@frame@leftline@singl}{\llap{\interruptrule{#1}{1}{2}}}%
  \appto{\mdf@frame@rightline@singl}{\rlap{\interruptrule{#1}{1}{2}}}%
  \appto{\mdf@frame@leftline@first}{\llap{\interruptrule{#1}{0}{1}}}%
  \appto{\mdf@frame@rightline@first}{\rlap{\interruptrule{#1}{0}{1}}}%
  \appto{\mdf@frame@leftline@second}{\llap{\interruptrule{#1}{1}{1}}}%
  \appto{\mdf@frame@rightline@second}{\rlap{\interruptrule{#1}{1}{1}}}%
  \appto{\mdf@frame@leftline@middle}{\llap{\interruptrule{#1}{0}{0}}}%
  \appto{\mdf@frame@rightline@middle}{\rlap{\interruptrule{#1}{0}{0}}}
}
\makeatother

\overlaplines{2.5ex}
\begin{mdframed}[linecolor=blue,linewidth=8pt]
\ExampleText
\end{mdframed}
\overlaplines[blue!70!black!20]{2.5ex}
\begin{mdframed}[linecolor=blue,linewidth=8pt]
\ExampleText
\end{mdframed}
```

An *inhomogeneous linear* differential equation has the form

$$L[v] = f, \quad (9)$$

where L is a linear differential operator, v is the dependent variable, and f is a given non-zero function of the independent variables alone.

An *inhomogeneous linear* differential equation has the form

$$L[v] = f, \quad (10)$$

where L is a linear differential operator, v is the dependent variable, and f is a given non-zero function of the independent variables alone.
