

The **morefloats** package

H.-Martin Münch (current maintainer;
invented by Don Hosek, Quixote)
<Martin.Muench at Uni-Bonn.de>

2011/07/10 v1.0e

Abstract

The current limit of unprocessed floats, 18, can be increased with this **morefloats** package. Otherwise, \clear(double)page, h(!), H from the **float** package, or \FloatBarrier from the **picins** package might help.

Note: The main code of this package was invented by
DON HOSEK, Quixote, 1990/07/27 (Thanks!).
The current maintainer is H.-MARTIN MÜNCH.

1 Introduction

The current limit of unprocessed floats, 18, can be increased with this `morefloats` package. Otherwise, `\clear(double)page`, `h(!)`, `H` from the `float` package, or `\FloatBarrier` from the `picins` package might help.

2 Usage

Load the package placing

```
\usepackage[<options>]{morefloats}
```

in the preamble of your L^AT_EX 2_E source file.

The `morefloats` package takes two options: `maxfloats` and `morefloats`, where `morefloats` gives the number of additional floats and `maxfloats` gives the maximum number of floats. `maxfloats=25` therefore means, that there are 18 (default) floats and 7 additional floats. `morefloats=7` therefore has the same meaning. It is only necessary to give one of these two options. At the time being, it is not possible to reduce the number of floats (for example to save boxes). If you have code accomplishing that, please send it to the package maintainer, thanks.

Version 1.0b used a fixed value of `maxfloats=36`. Therefore for backward compatibility this value is taken as the default one.

Example:

```
\usepackage[maxfloats=25]{morefloats}
```

or

```
\usepackage[morefloats=7]{morefloats}
```

or

```
\usepackage[maxfloats=25,morefloats=7]{morefloats}
```

.

3 Alternatives (kind of)

If the one additional counter needed by `morefloats` since v1.0c (or something else) is an issue, the old `morefloats` without the need for a counter but with a fixed number of `maxfloats=36` (i.e. 18 `morefloats`) can be used:
[CTAN:obsolete/macros/latex/contrib/misc/morefloats.sty](#).

If you really want to increase the number of (possible) floats, this is the right package. On the other hand, if you ran into trouble of `Too many unprocessed floats`, but would also accept less floats, there are some other possibilities:

- The command `\clearpage` forces L^AT_EX to output any floating objects that occurred before this command (and go to the next page). `\cleardoublepage` does the same but ensures that the next page with output is one with odd page number.
- Using different float specifiers: `t` top, `b` bottom, `p` page of floats.
- Suggesting L^AT_EX to put the object where it was placed: `h` (= here) float specifier.
- Telling L^AT_EX to please put the object where it was placed: `h!` (= here!) float specifier.
- Forcing L^AT_EX to put the object where it was placed and shut up: The `float` package provides the “style option `here`, giving floating environments a `[H]` option which means ‘PUT IT HERE’ (as opposed to the standard `[h]` option which means ‘You may put it here if you like’)” (`float` package documentation v1.3d as of 2001/11/08). Changing e.g. `\begin{figure}[tbp]...` to `\begin{figure}[H]...` forces the figure to be placed HERE instead of floating away.

The `float` package, 2001/11/08 v1.3d, is available at [CTAN: CTAN:macros/latex/contrib/float/](#)

- The `placeins` package provides the command `\FloatBarrier`. Floats occurring before the `\FloatBarrier` are not allowed to float to a later place, and floats occurring after the `\FloatBarrier` are not allowed to float to a earlier place than the `\FloatBarrier`. (There can be more than one `\FloatBarrier` in a document.)

The same package also provides an option to add to section headings automatically `\FloatBarriers`. It is further possible to make `\FloatBarriers` less strict (see that package’s documentation).

The `placeins` package, 2005/04/18 v2.2, is available at [CTAN: CTAN:macros/latex/contrib/placeins/](#)

See also <http://www.tex.ac.uk/cgi-bin/texfaq2html?label=figurehere>.

(You programmed or found another alternative, which is available at [CTAN:?](#) OK, send an e-mail to me with the name, location at [CTAN:?](#), and a short notice, and I will probably include it in the list above.)

4 Example

```

5 The implementation

We start off by checking that we are loading into L^AT_EX 2_< and announcing the name and version of this package.

```
193 /*package  
194 \NeedsTeXFormat{LaTeX2e} [2009/09/24]  
195 \ProvidesPackage{morefloats}[2011/07/10 v1.0e  
196     Increase limit of unprocessed floats (HMM; DH)]  
197  
Options  
198 \RequirePackage{kvoptions}[2010/12/23] v3.10  
199 %% morefloats may work with earlier versions of LaTeX2e and that  
200 %% package, but this was not tested.  
201 %% Please consider updating your LaTeX and package  
202 %% to the most recent version (if they are not already the most  
203 %% recent version).  
204  
205 \SetupKeyvalOptions{family = morefloats,prefix = morefloats@}  
206 \DeclareStringOption{maxfloats} % \morefloats@maxfloats  
207 \DeclareStringOption{morefloats} % \morefloats@morefloats  
208  
209 \ProcessKeyvalOptions*  
210
```

The `morefloats` package takes two options: `maxfloats` and `morefloats`, where `morefloats` gives the number of additional floats and `maxfloats` gives the maximum number of floats. `maxfloats=37` therefore means, that there are 18 (default) floats and another 19 additional floats. `morefloats=19` therefore has the same meaning. Version 1.0b used a fixed value of `maxfloats=36`. Therefore for backward compatibility this value will be taken as the default one.

Now we check whether `maxfloats=...` or `morefloats=...` or both were used, and if one option was not used, we supply the value. If no option was used at all, we use the default values.

```
211 \newcounter{maxfloats}  
212 \setcounter{maxfloats}{0}  
213  
214 \ifx\morefloats@maxfloats@\empty  
215   \ifx\morefloats@morefloats@\empty% apply defaults:  
216     \gdef\morefloats@maxfloats{36}  
217     \gdef\morefloats@morefloats{18}  
218   \else  
219     \setcounter{maxfloats}{18}  
220     \addtocounter{maxfloats}{\morefloats@morefloats}  
221     \global\edef\morefloats@maxfloats{\arabic{maxfloats}}  
222   \fi  
223 \else  
224   \ifx\morefloats@morefloats@\empty  
225     \setcounter{maxfloats}{\morefloats@maxfloats}  
226     \addtocounter{maxfloats}{-18}  
227     \global\edef\morefloats@morefloats{\arabic{maxfloats}}  
228   \fi  
229 \fi  
230
```

```
231 \setcounter{maxfloats}{\morefloats@maxfloats}
```

If option `maxfloats` is no number, the user will see the according error message here (if not already shown before).

```
232 \edef\morefloats@max{\arabic{maxfloats}}
233
234 \ifnum \value{maxfloats}<18
235   \PackageError{morefloats}{Option maxfloats is \arabic{maxfloats}<18}{%
236   maxfloats must be a number equal to or larger than 18\MessageBreak%
237   (or not used at all).\MessageBreak%
238   Now setting maxfloats=18.\MessageBreak%
239 }
240 \gdef\morefloats@max{18}
241 \fi
242
243 \setcounter{maxfloats}{\morefloats@morefloats}
```

If option `morefloats` is no number, the user will see the according error message here.

```
244
245 \edef\morefloats@more{\arabic{maxfloats}}
246
247 \ifnum \value{maxfloats}<0
248   \PackageError{morefloats}{Option morefloats is \arabic{maxfloats}<0}{%
249   morefloats must be a number equal to or larger than 0\MessageBreak%
250   (or not used at all).\MessageBreak%
251   Now setting morefloats=0.\MessageBreak%
252 }
253 \gdef\morefloats@more{0}
254 \fi
255
256 \setcounter{maxfloats}{18}
257 \addtocounter{maxfloats}{\morefloats@more}
```

The value of `morefloats` should now be equal to the value of `morefloats@max`.

```
258 \addtocounter{maxfloats}{-\morefloats@max}
```

Therefore `morefloats` should now be equal to zero.

```
259 \ifnum \value{maxfloats}=0% OK
260   \setcounter{maxfloats}{\morefloats@maxfloats}
261 \else
262   \PackageError{morefloats}{Clash between options maxfloats and morefloats}{%

267 }
```

We choose the larger value to be used.

```
268 \ifnum \value{maxfloats}<0% \morefloats@max > \morefloats@more
269   \setcounter{maxfloats}{\morefloats@maxfloats}
270 \else% \value{maxfloats}>0, \morefloats@max < \morefloats@more
271   \setcounter{maxfloats}{18}
272   \addtocounter{maxfloats}{\morefloats@morefloats}
273 \fi
274 \fi
275
```

```

276 \PackageWarning{maxfloats}{%
277   Maximum number of possible floats asked for: \arabic{maxfloats}. \MessageBreak%
278   LaTeX might run out of dimensions or memory\MessageBreak%
279   before this (in which case it will notify you).\MessageBreak%
280 }
281

```

The task at hand is to increase L^AT_EX's current limit of 18 unprocessed floats in memory at once to `\arabic{maxfloats}`. An examination of `latex.tex` reveals that this is accomplished by allocating (!) an insert register for each unprocessed float. A quick check of (the obsolete, now `ltplain`, update to L^AT_EX2e!) `lplain.lis` reveals that there is room, in fact, for up to 266 unprocessed floats, but T_EX's main memory could be exhausted well before that happened.

L^AT_EX2e uses a `\dimen` for each `\newinsert`, and the number of `\dimens` is also restricted. Therefore only use the number of floats you need! To check the number of used registers, you could use the `regstats` and/or `regcount` packages (see subsection 6.1).

```

Allocating insert
registers
@freelist
@elt
newinsert

```

First we allocate the additional insert registers needed.

That accomplished, the next step is to define the macro `\@freelist`, which is merely a list of the box registers each preceded by `\@elt`. This approach allows processing of the list to be done far more efficiently. A similar approach is used by MITTELBACH & SCHÖPF's `doc.sty` to keep track of control sequences, which should not be indexed.

First for the 18 default L^AT_EX boxes.

```

\ifnum \value{maxfloats} <= 18, LATEX already allocated the insert registers.
\fi

```

282 \global\long\def\@freelist{\@elt\bx@A\@elt\bx@B\@elt\bx@C\@elt\bx@D\@elt\bx@E\@elt\bx@F\@elt\bx@G\@elt\bx@H\@elt%
283 \bx@I\@elt\bx@J\@elt\bx@K\@elt\bx@L\@elt\bx@M\@elt\bx@N\@elt\bx@O\@elt\bx@P\@elt\bx@Q\@elt\bx@R}
284

Now we need to add `\@elt\bx@...` depending on the number of morefloats wanted:
(KARL BERRY helped with two out of three `\expandafters`, thanks!)

438 \ifnum \value{maxfloats}>171 \newinsert\bx@FP \expandafter\gdef\expandafter{\@freelist \@elt\bx@FP}
```

And that was already everything which was necessary.

560 </package>

6 Installation

6.1 Downloads

Everything is available on CTAN:, <ftp://ftp.ctan.org/tex-archive/>, but may need additional packages themselves.

morefloats.dtx For unpacking the `morefloats.dtx` file and constructing the documentation it is required:

- TeXFormat L^AT_EX 2 _{ε} , 2009/09/24, v2 _{ε} : CTAN:
- document class `ltxdoc`, 2007/11/11, v2.0u,
CTAN:[macros/latex/base/ltxdoc.dtx](#)
- package `pdflscape`, 2008/08/11, v0.10,
CTAN:[macros/latex/contrib/oberdiek/pdflscape.dtx](#)
- package `holtxdoc`, 2011/02/04, v0.21,
CTAN:[macros/latex/contrib/oberdiek/holtxdoc.dtx](#)
- package `hypdoc`, 2010/03/26, v1.9,
CTAN:[macros/latex/contrib/oberdiek/hypdoc.dtx](#)

morefloats.sty The `morefloats.sty` for L^AT_EX 2 _{ε} (i. e. each document using the `morefloats` package) requires:

- TeXFormat L^AT_EX 2 _{ε} , 2009/09/24, v2 _{ε} , CTAN:
- package `kvoptions`, 2010/12/23, v3.10,
CTAN:[macros/latex/contrib/oberdiek/kvoptions.dtx](#)

regstats To check the number of used registers it was mentioned:

- regcount**
- package `regstats`, 2011/06/18, v1.0d,
CTAN:[macros/latex/contrib/regstats/regstats.dtx](#)
 - package `regcount`, 1999/08/03, v1.0,
CTAN:[macros/latex/contrib/regcount/regcount.dtx](#)

Oberdiek All packages of HEIKO OBERDIEK'S bundle ‘oberdiek’ (especially `holtxdoc`, `hypdoc`, and `kvoptions`) are also available in a TDS compliant ZIP archive:
CTAN:[install/macros/latex/contrib/oberdiek.tds.zip](#).

hypdoc It is probably best to download and use this, because the packages in there should be both recent and compatible.

hyperref `hyperref` is not included in that bundle and needs to be downloaded separately,
<http://mirror.ctan.org/install/macros/latex/contrib/hyperref.tds.zip>.

Münch A list of my packages can be found at <http://www.Uni-Bonn.de/~uzs5pv/LaTeX.html>.

6.2 Package, unpacking TDS

Package. This package is available on [CTAN](#):

[CTAN:macros/latex/contrib/morefloats/morefloats.dtx](#)

The source file.

[CTAN:macros/latex/contrib/morefloats/morefloats.pdf](#)

The documentation.

[CTAN:install/macros/latex/contrib/morefloats.tds.zip](#)

Everything in TDS compliant, compiled format.

For required other packages, see the preceding subsection.

Unpacking. The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain `TEX`:

```
tex morefloats.dtx
```

About generating the documentation see paragraph [6.4](#) below.

TDS. Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

```
morefloats.sty → tex/latex/morefloats.sty  
morefloats.pdf → doc/latex/morefloats.pdf  
morefloats.dtx → source/latex/morefloats.dtx
```

If you have a `docstrip.cfg` that configures and enables `docstrip`'s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

6.3 Refresh file name databases

If your `TEX` distribution (te`TEX`, mik`TEX`,...) relies on file name databases, you must refresh these. For example, te`TEX` users run `texhash` or `mktextsr`.

6.4 Some details for the interested

Unpacking with L^AT_EX. The `.dtx` chooses its action depending on the format:

plain T_EX: Run `docstrip` and extract the files.

L^AT_EX: Generate the documentation.

If you insist on using L^AT_EX for `docstrip` (really, `docstrip` does not need L^AT_EX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{morefloats.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by a configuration file `ltxdoc.cfg`. For instance, put the following line into that file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfL^AT_EX:

```
pdflatex morefloats.dtx
makeindex -s gind.ist morefloats.idx
pdflatex morefloats.dtx
makeindex -s gind.ist morefloats.idx
pdflatex morefloats.dtx
```

7 Acknowledgements

The main code of this package was invented by
DON HOSEK, Quixote, 1990/07/27.

I (H.-MARTIN MÜNCH) would like to thank DON HOSEK for his work. Further I would like to thank KARL BERRY for helping with taking over the maintainership of this package and two missing `\expandafters`, HEIKO OBERDIEK for providing a lot (!) of useful packages (from which I also got everything I know about creating a file in `dtx` format, ok, say it: copying), everybody of the CTAN: team for managing CTAN:, and the news:comp.text.tex and news:de.comp.text.tex newsgroups for their help in all things T_EX.

8 History

[1990/07/27 v1.0a]

- Created by DON HOSEK.

[2008/11/14 v1.0b]

- CLEA F. REES added a license line.

[2010/09/20 v1.0c]

- `.dtx` created by H.-MARTIN MÜNCH.
- Included more documentation and alternatives.
- Included options to allow the user to flexible choose the number of floats from 18 up to 266 instead of fixed 36.
- Included an example file.
- Created a README file.

[2011/02/01 v1.0d]

- References to
<http://www.tex.ac.uk/cgi-bin/texfaq2html?label=figurehere> and
CTAN:obsolete/macros/latex/contrib/misc/morefloats.sty added.
- Now using the `lscape` package from the `graphics` bundle to print some pages of the documentation in landscape instead of portrait mode, because they were way too wide. (*Since v1.0e replaced by `pdflscape` package.*)
- Replaced the list of my packages with a link to web page list of those, which has the advantage of showing the recent versions of all those packages.
- Updated the version of the `hyperref` package. (*Since version 1.0e the `morefloats` package uses a fixed version of the `holtxdoc` package, which calls for the right version of the `hyperref` package, therefore it is no longer necessary to give the recent version of the `hyperref` package here.*)
- Minor details.

[2011/07/10 v1.0e]

- There is a new version of the used `kvoptions` package, 2010/12/23, v3.10.
- Now using the `pdflscape` package instead of the `lscape` package in the documentation.
- The `holtxdoc` package was fixed (recent: 2011/02/04, v0.21), therefore the warning in `drv` could be removed. – Adapted the style of this documentation to new OBERDIEK `dtx` style.
- Some details.

When you find a mistake or have a suggestion for an improvement of this package, please send an e-mail to the maintainer, thanks!
(Please see BUG REPORTS in the README.)
