

# The atveryend package

Heiko Oberdiek\*

<heiko.oberdiek at gmail.com>

2016/05/16 v1.9

## Abstract

This L<sup>A</sup>T<sub>E</sub>X package provides two hooks for `\end{document}` that are executed after the hook of `\AtEndDocument`. `\AfterLastShipout` can be used for code that is to be executed right after the last `\clearpage` before the .aux file is closed. `\AtVeryEndDocument` is used for code after closing and final reading of the .aux file.

# 1 Documentation

There are packages (e.g. `hyperref` [4], `lastpage` [6]) that want to call code after the typesetting is done, for example to remember the last page number.  $\text{\LaTeX}$  provides the hook `\AtEndDocument` (clsguide [1]). There are packages that use this hook to do their job for typesetting pages (e.g. `endfloat` emits the floats here [2]). Also a user might provide additional code in `\AtEndDocument`. Therefore packages have to call `\clearpage` in `\AtEndDocument` to get after the last shipout page. But this is not too reliable, because the right timing is important between packages that want or have to do things before the last page is output and packages that only work properly if they can reach the point after the last shipout.

Therefore the task of this package is to provide additional hooks for `\end{document}`. All hooks are called after the hook of `\AtEndDocument`.

`\BeforeClearDocument {<code>}`

The code is called before the final `\clearpage` in `\enddocument`. However it is unknown, whether the last page is already shipped out or if this will be triggered by the final `\clearpage`.

`\AfterLastShipout {<code>}`

The code is called after the final `\clearpage` of `\enddocument` before the main `.aux` file is closed. This is the right place to remember the last page in the `.aux` file, for instance.

`\AtVeryEndDocument {<code>}`

The code is called after the `.aux` file is closed and read in again. It is the place for final checks, rerun hints, final messages.

`\AtEndAfterFileList {<code>}`

After the `.aux` file closing and reading  $\text{\LaTeX}$  prints the file list if requested by `\listfiles`. Then this hook is executed.

`\AtVeryVeryEnd {<code>}`

This code is called right before the final `\@@end`.

## 1.1 Related work

**Package `scrfile`:** Markus Kohm has written package `scrfile` (part of KOMA-Script [5]) that provides hooks `\BeforeClosingMainAux` and `\AfterReadingMainAux`. They have the same function as the hooks of this package. In fact this package uses them, if they are available.

**Class `revtex4-1`:** This class calls `\clear@document` in `\enddocument` that wraps the final call of `\clearpage`. Thus it can be used as hook to call stuff after that `\clearpage`. This is also done by this package.

**Package `etoolbox`:** It provides `\AfterEndDocument`, a hook right before `\dead-cycles` or `\@@end` [3].

This package tries to combine as many approaches as possible:

- It looks for a known `\enddocument` and redefines it.
- Hooks that are provided by others are used (package `scrfile` or class `revtex4-1`).
- It redefines `\@checkend` and `\@dofilelist` to insert the hooks similar to package `scrfile`.
- The hook execution is wrapped in a macro that is redefined by its first call to prevent calling the hook more than once.

## 2.3 Redefining `\enddocument`

This approach looks for known versions of `\enddocument` and redefines it. Class `seminar` and package `slidesec` are not checked, because there would be too much combinations to check.

### 2.3.1 L<sup>A</sup>T<sub>E</sub>X kernel

`\AtVeryEnd@test@standard`

567       \AfterReadingMainAux{\Call@AtVeryEndDocument}%
568     }%
569   }{}%

```

### 2.5.2 Package etoolbox

```

570 \@ifpackageloaded{etoolbox}{%
571   \AtVeryEnd@ifundefined{AfterEndDocument}{%
572     \AfterEndDocument{\Call@AtVeryEndDocument}%
573   }%
574 }{}%
575 }

```

## 2.6 Class letter

The class letter and some similar classes insert material (`\@startlabels`) at the end of the document. However, this method violates a precondition of this package that the `\clearpage` in `\enddocument` is the final call with no material at later times. Therefore we move the label making from the `.aux` file to `\AtEndDocument`.

```

576 \def\AtVeryEnd@temp{%

## 4 Installation

### 4.1 Download

**Package.** This package is available on CTAN<sup>1</sup>:

**CTAN:**[macros/latex/contrib/oberdiek/atveryend.dtx](http://ctan.org/pkg/atveryend) The source file.

---

<sup>1</sup><http://ctan.org/pkg/atveryend>

[CTAN:macros/latex/contrib/oberdiek/atveryend.pdf](#) Documentation.

**Bundle.** All the packages of the bundle ‘oberdiek’ are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

[CTAN:install/macros/latex/contrib/oberdiek.tds.zip](#)

*TDS* refers to the standard “A Directory Structure for T<sub>E</sub>X Files” ([CTAN:tds/tds.pdf](#)). Directories with `texmf` in their name are usually organized this way.

## 4.2 Bundle installation

**Unpacking.** Unpack the `oberdiek.tds.zip` in the TDS tree (also known as `texmf` tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

**Script installation.** Check the directory `TDS:scripts/oberdiek/` for scripts that need further installation steps. Package `attachfile2` comes with the Perl script `pdfatfi.pl` that should be installed in such a way that it can be called as `pdfatfi`. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

## 4.3 Package installation

**Unpacking.** The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain T<sub>E</sub>X:

```
tex atveryend.dtx
```

**TDS.** Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

<code>atveryend.sty</code>	→ <code>tex/latex/oberdiek/atveryend.sty</code>
<code>atveryend.pdf</code>	→ <code>doc/latex/oberdiek/atveryend.pdf</code>
<code>test/atveryend-test1.tex</code>	→ <code>doc/latex/oberdiek/test/atveryend-test1.tex</code>
<code>atveryend.dtx</code>	→ <code>source/latex/oberdiek/atveryend.dtx</code>

If you have a `docstrip.cfg` that configures and enables `docstrip`’s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

## 4.4 Refresh file name databases

If your T<sub>E</sub>X distribution (teT<sub>E</sub>X, mikT<sub>E</sub>X, ...) relies on file name databases, you must refresh these. For example, teT<sub>E</sub>X users run `texhash` or `mktextlsr`.

## 4.5 Some details for the interested

**Unpacking with L<sup>A</sup>T<sub>E</sub>X.** The `.dtx` chooses its action depending on the format:

**plain T<sub>E</sub>X:** Run `docstrip` and extract the files.

**L<sup>A</sup>T<sub>E</sub>X:** Generate the documentation.

If you insist on using L<sup>A</sup>T<sub>E</sub>X for `docstrip` (really, `docstrip` does not need L<sup>A</sup>T<sub>E</sub>X), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{atveryend.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

**Generating the documentation.** You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by the configuration file `ltxdoc.cfg`. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfL<sup>A</sup>T<sub>E</sub>X:

```
pdflatex atveryend.dtx
makeindex -s gind.ist atveryend.idx
pdflatex atveryend.dtx
makeindex -s gind.ist atveryend.idx
pdflatex atveryend.dtx
```

## 5 Catalogue

The following XML file can be used as source for the [T<sub>E</sub>X Catalogue](#). The elements `caption` and `description` are imported from the original XML file from the Catalogue. The name of the XML file in the Catalogue is `atveryend.xml`.

```
775 (*catalogue)
776 <?xml version='1.0' encoding='us-ascii'?>
777 <!DOCTYPE entry SYSTEM 'catalogue.dtd'>

## 8 History

### [2009/12/06 v1.0]

- The first version.

### [2009/12/07 v1.1]

- Bug fixes.

### [2009/12/09 v1.2]

- Additional support of classes and packages.

### [2009/12/11 v1.3]

- Patch for letter like classes that puts label into the ‘aux’ file.
- Hook `\BeforeClearDocument` added (request from Arthur Ogawa).
- Patch of `\clear@document` removed (Arthur Ogawa).
- A nested `\AtBeginDocument` removed.

### [2010/01/25 v1.4]

- Moved from TDS:\*/generic/\* to TDS:\*/latex/.

### [2010/03/24 v1.5]

- `\Call@BeforeClearDocument` fixed (Ahmed Musa).

### [2011/04/15 v1.6]

- `\Call@AtEndAfterFileList` and `\Call@AtVeryVeryEnd` added.

### [2011/04/23 v1.7]

- Some fix for `\AtVeryEnd@RedefCheckEnd` to avoid error because of undefined control sequence in some circumstances (thanks to D.P. Story for bug report).

[2011/06/30 v1.8]

- Support of changed `\enddocument` of L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub> 2011/06/27.

[2016/05/16 v1.9]

- Documentation updates.

## 9 Index

Numbers written in *italic* refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; plain numbers refer to the code lines where the entry is used.
