

# The `catchfile` package

Heiko Oberdiek

<oberdiek@uni-freiburg.de>

2007/11/11 v1.2

## Abstract

This package catches the contents of a file and puts it in a macro. It requires  $\varepsilon$ - $\text{\TeX}$ . Both  $\text{\LaTeX}$  and plain- $\text{\TeX}$  are supported.

## Contents

<b>1 Documentation</b>	<b>1</b>
<b>2 Implementation</b>	<b>2</b>
2.1 Reload check and package identification . . . . .	2
2.2 Catcodes . . . . .	3

<b>6 Index</b>	<b>10</b>

## 1 Documentation

The package relies on  $\varepsilon$ - $\text{\TeX}$ 's `\everyeof`. Otherwise it aborts with an error message.

```
\CatchFileDef {\langle cmd \rangle} {\langle file name \rangle} {\langle setup \rangle}
\CatchFileEdef {\langle cmd \rangle} {\langle file name \rangle} {\langle setup \rangle}
```

Macro `\langle cmd \rangle` is defined with the contents of file `\langle file name \rangle`. `\CatchFileDef` uses `\def`, `\CatchFileEdef` `\edef` for the definition. Additional setup code for setting

catcodes or treatment of line ends can be given in code `<setup>`. See the test files for an example.

## 2 Implementation

1 `(*package)`

### 2.1 Reload check and package identification

Reload check, especially if the package is not used with L<sup>A</sup>T<sub>E</sub>X.

```

2 \begingroup

```

## 2.3 Preparations

```

94 \begingroup\expandafter\expandafter\expandafter\endgroup
95 \expandafter\ifx\csname RequirePackage\endcsname\relax
96   \input infwarerr.sty\relax
97 \else
98   \RequirePackage{infwarerr}[2007/09/09]%
99 \fi
      Check for ε-TEX's \everyeof.
100 \begingroup
101   \escapechar=92\relax
102   \edef\TestString{\string\everyeof}%
103   \edef\TestMeaning{\meaning\everyeof}%
104   \ifx\TestString\TestMeaning
105   \else
106     \@PackageErrorNoLine{catchfile}%
107     Cannot find e-TeX's \string\everyeof,\MessageBreak

```

```

108      package loading is aborted%
109  }\@ehd
110  \endgroup
111  \CatchFile@AtEnd
112  \expandafter\endinput
113 \fi
114 \endgroup

```

## 2.4 Looking for primitive \input

\CatchFile@Input The package needs the expandable primitive \input. However there are formats that redefine it. For example, L<sup>A</sup>T<sub>E</sub>X's \input is not expandable, but it stores the primitive in \@@input. The third possibility is \pdfprimitive, introduced in pdfT<sub>E</sub>X 1.40.0.

Thus we try to find the primitive and store it in \CatchFile@Input. If it is used, it must be expanded twice (because of the solution with \pdfprimitive).

```

115 \begingroup

185             File '#2' not found%
186         }\@ehc
187 }

```

## 2.6 Catch file contents

```

\CatchFileEdef

188 \long\def\CatchFileEdef#1#2#3{%
189     \CatchFile@CheckFileExists{#2}%
190     \ifx\CatchFile@File\relax
191         \CatchFile@NotFound{#1}{#2}%
192     \else
193         \begingroup
194             \everyeof{\noexpand}%
195             #3%
196             \xdef\CatchFile@Contents{\CatchFile@Input\CatchFile@File\space}%
197         \endgroup
198         \let#1\CatchFile@Contents
199     \fi
200 }

\CatchFileDef

201 \long\def\CatchFileDef#1#2#3{%
202     \CatchFile@CheckFileExists{#2}%
203     \ifx\CatchFile@File\relax
204         \CatchFile@NotFound{#1}{#2}%
205     \else
206         \begingroup
207             \everyeof\expandafter{%
208                 \CatchFile@EOF
209                 \noexpand
210             }%

```

```

211      \expandafter\long\expandafter\def\expandafter\CatchFile@Do
212          \expandafter##\expandafter\@CatchFile@EOF{%
213              \endgroup
214              \def#1{##1}%
215          }%
216          #3%
217      \expandafter\expandafter\expandafter\CatchFile@Do
218          \CatchFile@Input\CatchFile@File\relax
219  \fi
220 }

```

\CatchFile@EOF If the file is read the catcode mappings are fixed. This means that the same character cannot occur inside the file with different catcodes. Thus we use as end of file marker the at sign twice with different catcodes.

```

221 \begingroup
222  \lccode65=64 % lowercase('A') = '@'
223  \lccode66=64 % lowercase('B') = '@'
224  \catcode65=8 % catcode('A') = subscript
225  \catcode66=3 % catcode('B') = math shift
226 \lowercase{\endgroup
227  \def\CatchFile@EOF{AB}%
228 }

229 \CatchFile@AtEnd
230 
```

### 3 Test

## 4 Installation

### 4.1 Download

**Package.** This package is available on CTAN<sup>1</sup>:

[CTAN:macros/latex/contrib/oberdiek/catchfile.dtx](http://CTAN:macros/latex/contrib/oberdiek/catchfile.dtx) The source file.

[CTAN:macros/latex/contrib/oberdiek/catchfile.pdf](http://CTAN:macros/latex/contrib/oberdiek/catchfile.pdf) Documentation.

**Bundle.** All the packages of the bundle ‘oberdiek’ are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

[CTAN:install/macros/latex/contrib/oberdiek.tds.zip](http://CTAN:install/macros/latex/contrib/oberdiek.tds.zip)

TDS refers to the standard “A Directory Structure for T<sub>E</sub>X Files” ([CTAN:tds/tds.pdf](http://CTAN:tds/tds.pdf)). Directories with `texmf` in their name are usually organized this way.

---

<sup>1</sup>[ftp://ftp.ctan.org/tex-archive/](http://ftp.ctan.org/tex-archive/)

## 4.2 Bundle installation

**Unpacking.** Unpack the `oberdiek.tds.zip` in the TDS tree (also known as `texmf` tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

**Script installation.** Check the directory `TDSScripts/oberdiek/` for scripts that need further installation steps. Package `attachfile2` comes with the Perl script `pdfatfi.pl` that should be installed in such a way that it can be called as `pdfatfi`. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

## 4.3 Package installation

**Unpacking.** The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain-T<sub>E</sub>X:

```
tex catchfile.dtx
```

**TDS.** Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

```
catchfile.sty           → tex/generic/oberdiek/catchfile.sty
catchfile.pdf          → doc/latex/oberdiek/catchfile.pdf
test/catchfile-test1.tex → doc/latex/oberdiek/test/catchfile-test1.tex
test/catchfile-test2.tex → doc/latex/oberdiek/test/catchfile-test2.tex
test/catchfile-test3.tex → doc/latex/oberdiek/test/catchfile-test3.tex
catchfile.dtx          → source/latex/oberdiek/catchfile.dtx
```

If you have a `docstrip.cfg` that configures and enables `docstrip`'s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

## 4.4 Refresh file name databases

If your T<sub>E</sub>X distribution (teT<sub>E</sub>X, mikT<sub>E</sub>X, ...) relies on file name databases, you must refresh these. For example, teT<sub>E</sub>X users run `texhash` or `mktexlsr`.

## 4.5 Some details for the interested

**Attached source.** The PDF documentation on CTAN also includes the `.dtx` source file. It can be extracted by AcrobatReader 6 or higher. Another option is `pdftk`, e.g. unpack the file into the current directory:

```
pdftk catchfile.pdf unpack_files output .
```

**Unpacking with L<sup>A</sup>T<sub>E</sub>X.** The `.dtx` chooses its action depending on the format:

**plain-T<sub>E</sub>X:** Run `docstrip` and extract the files.

**L<sup>A</sup>T<sub>E</sub>X:** Generate the documentation.

If you insist on using L<sup>A</sup>T<sub>E</sub>X for `docstrip` (really, `docstrip` does not need L<sup>A</sup>T<sub>E</sub>X), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{catchfile.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

**Generating the documentation.** You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by the configuration file `ltxdoc.cfg`. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdflATEX:

```
pdflatex catchfile.dtx
makeindex -s gind.ist catchfile.idx
pdflatex catchfile.dtx
makeindex -s gind.ist catchfile.idx
pdflatex catchfile.dtx
```

## 5 History

[2007/05/30 v1.0]

- First version.

[2007/09/09 v1.1]

- Catcode section rewritten.

[2007/11/11 v1.2]

- Use of package `pdfTEXcmds` for LUATEX support.
