

The catchfile package

Heiko Oberdiek
<oberdiek@uni-freiburg.de>

2007/09/09 v1.1

Abstract

This package catches the contents of a file and puts it in a macro. It requires ε -TeX. Both L^AT_EX and plain-T_EX are supported.

Contents

1 Documentation	1
2 Implementation	2
2.1 Reload check and package identification	2

1 Documentation

The package relies on ε -TeX's `\everyeof`. Otherwise it aborts with an error message.

<code>\CatchFileDef <cmd> <file name> <setup></code> <code>\CatchFileEdef <cmd> <file name> <setup></code>

Macro `<cmd>` is defined with the contents of file `<file name>`. `\CatchFileDef` uses `\def`, `\CatchFileEdef` `\edef` for the definition. Additional setup code for setting

catcodes or treatment of line ends can be given in code `<setup>`. See the test files for an example.

2 Implementation

```
1 (*package)
```

2.1 Reload check and package identification

Reload check, especially if the package is not used with L^AT_EX.

```

Check for ε -TeX's `\everyeof`.

```

79 \begingroup
80   \escapechar=92\relax
81   \edef\TestString{\string\everyeof}%
82   \edef\TestMeaning{\meaning\everyeof}%
83   \ifx\TestString\TestMeaning
84   \else
85     \@PackageErrorNoLine{catchfile}{%
86       Cannot find e-TeX's \string\everyeof, \MessageBreak
87       package loading is aborted%
88     }\@ehd
89   \endgroup
90   \CatchFile@AtEnd
91   \expandafter\endinput
92 \fi
93 \endgroup

```

2.4 Looking for primitive `\input`

`\CatchFile@Input` The package needs the expandable primitive `\input`. However there are formats that redefine it. For example, L^AT_EX's `\input` is not expandable, but it stores the primitive in `\@@input`. The third possibility is `\pdfprimitive`, introduced in pdf_TE_X 1.40.0.

Thus we try to find the primitive and store it in `\CatchFile@Input`. If it is used, it must be expanded twice (because of the solution with `\pdfprimitive`).

```

94 \begingroup
95   \def\Check#1#2#3#4\endgroup{%
96     \edef\TestString{\string#1}%

149       \@addtofilelist\CatchFile@File
150       \fi
151     }{%
152       \let\CatchFile@File\relax
153     }%
154   }%
155   \def\CatchFile@DefFile#1 \@nil{%
156     \def\CatchFile@File{#1}%

```

```

157 }%
158 \fi

```

`\CatchFileNotFound`

```

159 \def\CatchFile@NotFound#1#2{%
160   \def#1{}%
161   \@PackageError{catchfile}{%
162     File ‘#2’ not found%
163   }\@ehc
164 }

```

2.6 Catch file contents

`\CatchFileEdef`

```

165 \long\def\CatchFileEdef#1#2#3{%
166   \CatchFile@CheckFileExists{#2}%
167   \ifx\CatchFile@File\relax
168     \CatchFile@NotFound{#1}{#2}%
169   \else
170     \begingroup
171     \everyeof{\noexpand}%
172     #3%
173     \xdef\CatchFile@Contents{\CatchFile@Input\CatchFile@File\space}%
174     \endgroup
175     \let#1\CatchFile@Contents
176   \fi
177 }

```

`\CatchFileDef`

```

178 \long\def\CatchFileDef#1#2#3{%
179   \CatchFile@CheckFileExists{#2}%
180   \ifx\CatchFile@File\relax
181     \CatchFile@NotFound{#1}{#2}%
182   \else
183     \begingroup
184     \everyeof{\expandafter}%
185     \CatchFile@EOF
186     \noexpand
187   }%
188   \expandafter\long\expandafter\def\expandafter\CatchFile@Do
189     \expandafter##\expandafter1\CatchFile@EOF{%
190     \endgroup
191     \def#1{##1}%
192   }%
193   #3%
194   \expandafter\expandafter\expandafter\CatchFile@Do
195   \CatchFile@Input\CatchFile@File\relax
196 \fi
197 }

```

`\CatchFile@EOF` If the file is read the catcode mappings are fixed. This means that the same character cannot occur inside the file with different catcodes. Thus we use as end of file marker the at sign twice with different catcodes.

```

198 \begingroup
199   \lccode65=64 % lowercase('A') = '@'
200   \lccode66=64 % lowercase('B') = '@'
201   \catcode65=8 % catcode('A') = subscript
202   \catcode66=3 % catcode('B') = math shift
203 \lowercase{\endgroup
204   \def\CatchFile@EOF{AB}%
205 }

```

```

206 \CatchFile@AtEnd
207 </package>

```

4 Installation

4.1 Download

Package. This package is available on CTAN¹:

[CTAN:macros/latex/contrib/oberdiek/catchfile.dtx](http://ctan.org/ctan/macros/latex/contrib/oberdiek/catchfile.dtx) The source file.

[CTAN:macros/latex/contrib/oberdiek/catchfile.pdf](http://ctan.org/ctan/macros/latex/contrib/oberdiek/catchfile.pdf) Documentation.

Bundle. All the packages of the bundle ‘oberdiek’ are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

[CTAN:macros/latex/contrib/oberdiek/oberdiek-tds.zip](http://ctan.org/ctan/macros/latex/contrib/oberdiek/oberdiek-tds.zip)

TDS refers to the standard “A Directory Structure for TeX Files” ([CTAN:tds/tds.pdf](http://ctan.org/ctan/tds/tds.pdf)). Directories with `texmf` in their name are usually organized this way.

¹ftp://ftp.ctan.org/tex-archive/

4.2 Bundle installation

Unpacking. Unpack the `oberdiek-tds.zip` in the TDS tree (also known as `texmf` tree) of your choice. Example (linux):

```
unzip oberdiek-tds.zip -d ~/texmf
```

Script installation. Check the directory `TDS:scripts/oberdiek/` for scripts that need further installation steps. Package `attachfile2` comes with the Perl script `pdfatfi.pl` that should be installed in such a way that it can be called as `pdfatfi`. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

4.3 Package installation

Unpacking. The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain-`TEX`:

```
tex catchfile.dtx
```

TDS. Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

```
catchfile.sty      → tex/generic/oberdiek/catchfile.sty
catchfile.pdf      → doc/latex/oberdiek/catchfile.pdf
test/catchfile-test1.tex → doc/latex/oberdiek/test/catchfile-test1.tex
test/catchfile-test2.tex → doc/latex/oberdiek/test/catchfile-test2.tex
test/catchfile-test3.tex → doc/latex/oberdiek/test/catchfile-test3.tex
catchfile.dtx      → source/latex/oberdiek/catchfile.dtx
```

If you have a `docstrip.cfg` that configures and enables `docstrip`'s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

4.4 Refresh file name databases

If your `TEX` distribution (te`TEX`, mi`TEX`, ...) relies on file name databases, you must refresh these. For example, te`TEX` users run `texhash` or `mktextlsr`.

4.5 Some details for the interested

Attached source. The PDF documentation on CTAN also includes the `.dtx` source file. It can be extracted by AcrobatReader 6 or higher. Another option is `pdftk`, e.g. unpack the file into the current directory:

```
pdftk catchfile.pdf unpack_files output .
```

Unpacking with L^AT_EX. The `.dtx` chooses its action depending on the format:

plain-`TEX`: Run `docstrip` and extract the files.

L^AT_EX: Generate the documentation.

If you insist on using L^AT_EX for `docstrip` (really, `docstrip` does not need L^AT_EX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{catchfile.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by the configuration file `ltxdoc.cfg`. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfL^AT_EX:

```
pdflatex catchfile.dtx
makeindex -s gind.ist catchfile.idx
pdflatex catchfile.dtx
makeindex -s gind.ist catchfile.idx
pdflatex catchfile.dtx
```

5 History

[2007/05/30 v1.0]

- First version.

[2007/09/09 v1.1]

- Catcode section rewritten.

6 Index

Numbers written in *italic* refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; numbers in roman refer to the code lines where the entry is used.
