

The `embedfile` package

Heiko Oberdiek

<oberdiek@uni-freiburg.de>

2007/11/25 v2.3

Abstract

This package embeds files to a PDF document. Currently the only supported driver is pdf_TE_X >= 1.30 in PDF mode.

1 Documentation

1.1 Introduction

The PDF format ([3]) allows the inclusion of files inside the PDF document. The included files can be bound to an annotation on a page. Or they can be recorded in a sorted list of embedded files. The packages `attachfile` or `attachfile2` follow the first approach, this package uses the latter method.

1.1.1 Future development

My dream is a large package that merges the features of all these packages mentioned before:

- Files can be attached to a page.
- Files can be attached to the document.
- An easy user interface for simple, common tasks and beginners.
- An interface for the advanced users that want to setup every detail.
- Support of many drivers (`pdftex`, `dvips`, `dvipdfm`, ...).
- ...

However, I have not managed to take the time for this project. Instead:

- First I experimented with package `attachfile`, adding driver support, fixing bugs, The result is currently named as `attachfile2`. It uses an external script to get file properties (size, date, checksum, ...).
- In order to avoid an external program for getting basic file properties I provided a patch “`EscapeAndOther`” for `pdfTeX` that was accepted for version 1.30.
- This package closes a gap left by the packages for attaching files and allows the embedding of files to the document. Also it makes use of the new primitives of `pdfTeX`.

1.2 User interface

This package `embedfile` can be used with both `LATeX` and plain-`TEx`. See [subsubsection 1.5.1](#) that explains the use with plain-`TEx` by an example. In `LATeX` the package is loaded as usually. There are no options.

```
\usepackage{embedfile}
```

```
\embedfile [<options>] {<file>}
```

The macro `\embedfile` includes file `<file>` and attaches it to the PDF document. At the end of the document the sorted list of embedded files are written. Thus you can safely use `\embedfile` before `\end{document}`. Embedding files using `\AtEndDocument` will only work, if `\AtEndDocument` is called before loading the package `embedfile`.

The `<options>` are give as key value pairs. The following keys are supported:

filespec This allows to override the file name that appears in the PDF file. If you are using other than simple file names (8bit, path separators, ...), look into the PDF specification ([3]). There are rules how these file names must be written/encoded.

filesystem This sets the entry `/FS` in the file specification dictionary, see PDF specification ([3]). Example: `filesystem=URL`.

mimetype This sets the mime type ([4]) of the file, see [subsubsection 1.5.1](#) for examples and [5] for a list of officially registered types.

desc The description for the file.

stringmethod The package must convert the values of the keys `filespec` and `desc` into a PDF string. If `hyperref` is found, then its `\pdfstringdef` will be used, otherwise pdfTEX's `\pdfescapestring` is used. Value `psd` forces the use of `\pdfstringdef`, value `escape` the use of `\pdfescapestring`.

<key>.value Sets the value of a collection item property, see section [1.3](#).

<key>.prefix Sets the prefix of a collection item property, see section [1.3](#).

id The value must be an unique name. Macros `\embedfileifobjectexists` and `\embedfilegetobject` are using this name later.

```
\embedfilefinish
```

The list of all embedded files must be added as data structure in the PDF file. In case of LATEX this is automatically done. The package uses `\AtEndDocument`. Then the list of all files should be known. However, plain-TEX does not know about `\AtEndDocument`. Thus the user must call `\embedfilefinish` at the end of the document after the last file is embedded.

```
\embedfilesetup {<options>}
```

Options for `\embedfile` and collection support can be set in `\embedfilesetup`.

1.3 Collection support (PDF 1.7)

Since PDF 1.7 the embedded files can form a *collection* (sometimes referred as *package*), the main document is called *cover sheet*. See PDF specification 8.2.4 “Collections” and 3.10.5 “Collection items” [3].

Usually Acrobat Reader 7 or 8 shows the embedded files in a table at the bottom with the following columns:

Name	Description	Modified	Size
...

If the files form a collection, then they are displayed in a table left or top (depending on option `view`, see `\embedfilesetup`).

Collection support is enabled automatically, if it is used.

```
\embedfilesetup {\langle options \rangle}
```

The following options are supported in addition to options for `\embedfile`:

view If the PDF file contains a collection, then Acrobat Reader 8 shows a line at the top below the menu bar and the toolbar. It shows the current selected file, icons for changing the view mode, an options menu. The initial mode how the collection is presented is set by this option `view`. The following modes/values are supported, the default is `details`:

`details` The full collection table is displayed at the top below the collection bar.

`tile` The files of the collection are shown in tile mode on the left.

`hidden` The collection table is not shown.

initialfile Selects the file that is initially presented. Especially useful for an embedded PDF file that is then shown instead of the cover document.

```
\embedfilefield {\langle key \rangle} {\langle options \rangle}
```

Macro `\embedfilefield` defines a column/field in the collection table. The name of the field is `\langle key \rangle`.

type sets the type of the field. The supported values are:

`text` A text field. Its value is set in `\embedfile` by option `\langle key \rangle.value`.

`date` A date field. Its value is set in `\embedfile` by option `\langle key \rangle.value`. A special format is required, see “3.8.3 Dates” [3].

`number` A field with an integer or float number. Its value is set in `\embedfile` by option `\langle key \rangle.value`.

`file` The file name of the embedded file.

`desc` The description text of the embedded file. It is set in `\embedfile` by option `desc`.

`moddate` The modification date of the embedded file.

`size` The size of the embedded file.

All types allow the use of a prefix that is disregarded by sorting. The prefix for this field is set in `\embedfile` by option `\langle key \rangle.prefix`.

title sets the column title.

visible controls whether the column is presented:

`true` shows the column.

`false` hides the column.

Default: `true`

edit Allows the editing of field values. Does not seem to have an effect for Acrobat Reader.

`true` enables the feature, if available (depends on the PDF viewer).

`false` disables the feature.

Default: `false`

The order of `\embedfilefield` statements defines the order of the columns.

```
\embedfilesort {\langle key-sort-list\rangle}
```

The sort order of the embedded files are controlled by macro `\embedfilesort`. `\langle key-sort-list\rangle` defines the sort order. The key is a field name defined by `\embedfilefield`. Its value is either `ascending` or `descending`. The default is `ascending`.

1.4 Export of object references

Caution: This feature is still experimental. It may be even removed in future versions. Therefore feedback would be nice, if someone has a useful application for this feature.

Object numbers are saved, if id is given in `\embedfile`. The following objects are supported:

- `EmbeddedFile`
- `Filespec`

```
\embedfileifobjectexists {\langle id\rangle} {\langle type\rangle} {\langle then\rangle} {\langle else\rangle}
```

Macro `\embedfileifobjectexists` tests whether object of `\langle type\rangle` is available for the embedded file identified by `\langle id\rangle`.

```
\embedfilegetobject {\langle id\rangle} {\langle type\rangle}
```

Macro `\embedfilegetobject` expands to the full object reference object of `\langle type\rangle` for the embedded file identified by `\langle id\rangle`.

1.4.1 Example

```
\embedfile[id={foo}]{foo.pdf}
\embedfileifobjectexists{foo}{Filespec}{%
  \typeout{%
    FileSpec object for 'foo': %
    \embedfilegetobject{foo}{Filespec}%
  }%
}{%
  \typeout{No Filespec object for 'foo'}%
}
```

1.5 Examples

1.5.1 plain-T_EX

The package can be used with plain-T_EX. It can be used with or without help from `miniltx.tex`.

If additionally package `keyval` (`graphicx`) is needed, load it first. Then package `embedfile` avoids a duplicate loading of package `keyval`.

Because plain-T_EX does not provide a hook at end of the document, you have to call `\embedfilefinish` manually at the end after the last embedded file.

```
1 {*exampleplain}
2 %<<END
3 % Load packages
4 \input miniltx
5 % \def\Gin@driver{pdftex.def}
6 % \input graphicx.sty
```

```

7 \input embedfile.sty
8 \resetatcatcode
9
10 % default setting
11 \embedfilesetup{
12   mimetype=text/plain
13 }
14
15 % Embed files
16 \embedfile[
17   filespec=example.tex,
18   desc={Source code (plain-TeX) of this example}
19 ]{embedfile-example-plain.tex}
20
21 \embedfile[
22   desc={Source of package ‘embedfile’}
23 ]{embedfile.dtx}
24
25 \embedfile[
26   mimetype=application/pdf,
27   desc={Documentation of package ‘embedfile’}
28 ]{embedfile.pdf}
29
30 % Some text
31 This example document contains three embedded files.
32
33 % End of document
34 \embedfilefinish % don't forget
35 \bye
36 %END
37 </exampleplain>

```

1.5.2 Collection example

```

38 <examplecollection>
39 %<<END
40 \NeedsTeXFormat{LaTeX2e}
41 \documentclass{article}
42 \usepackage[bookmarks=false]{hyperref}
43 % provides \pdfstringdef that is then used by ‘title’ and
44 % other keys.
45 \usepackage{embedfile}[2007/11/25]
46 \embedfilesetup{
47   view=details,
48   initialfile=embedfile.pdf
49 }
50 \embedfilefield{file}{
51   type=file,
52   title={File name}
53 }
54 \embedfilefield{description}{
55   type=desc,
56   title={Description}
57 }
58 \embedfilefield{date}{
59   type=moddate,
60   title={Date}
61 }
62 \embedfilefield{size}{
63   type=size,
64   title={Size}
65 }
66 \embedfilefield{type}{}

```

```

67   type=text,
68   title={Type},
69   visible=false
70 }
71 \embedfile{sort{
72   type,
73   date=descending
74 }
75 \begin{document}
76 An example for embedded files as collection.
77 You need Acrobat Reader 8 or higher.
78
79 \embedfile[
80   desc={Source file of package ‘embedfile’},
81   description.prefix={Package: },
82   type.value={DTX}
83 ]{\embedfile.dtx}
84
85 \embedfile[
86   desc={Documentation of package ‘embedfile’},
87   description.prefix={Package: },
88   type.value={PDF}
89 ]{\embedfile.pdf}
90
91 \embedfile[
92   desc={The source for this example},
93   description.prefix={Example: },
94   type.value={TEX}
95 ]{\jobname.tex}
96
97 \end{document}
98 %END
99 
```

1.6 Package **dtx-attach**

Package **dtx-attach** is just a small application of package **embedfile**. I am using it for the CTAN documentation of my packages in [CTAN:macros/latex/contrib/oberdiek/](#). It also serves as small example for the use of the package with L^AT_EX.

```

100 <*dtxattach>
101 \NeedsTeXFormat{LaTeX2e}
102 \ProvidesPackage{dtx-attach}
103   [2007/11/25 v2.3 Embed \string\jobname.dtx (HO)]%
104 \RequirePackage{embedfile}[2007/11/25]
105 \embedfile[%]
106   stringmethod=escape,%
107   mimetype=plain/text,%
108   desc={LaTeX docstrip source archive for package ‘\jobname’}%
109 ]{\jobname.dtx}
110 
```

2 Implementation

```
111 <*package>
```

2.1 Reload check and package identification

Reload check, especially if the package is not used with L^AT_EX.

```

112 \begingroup
113   \catcode44 12 % ,
114   \catcode45 12 % -
115   \catcode46 12 % .

```

```

116  \catcode58 12 % :
117  \catcode64 11 % @
118  \catcode123 1 % {
119  \catcode125 2 % }
120  \expandafter\let\expandafter\x\csname ver@embedfile.sty\endcsname
121  \ifx\x\relax % plain-TeX, first loading
122  \else
123    \def\empty{}%
124    \ifx\x\empty % LaTeX, first loading,
125      % variable is initialized, but \ProvidesPackage not yet seen
126    \else
127      \catcode35 6 % #
128      \expandafter\ifx\csname PackageInfo\endcsname\relax
129        \def\x#1#2{%
130          \immediate\write-1{Package #1 Info: #2.}%
131        }%
132    \else
133      \def\x#1#2{\PackageInfo{#1}{#2, stopped}}%
134    \fi
135    \x{embedfile}{The package is already loaded}%
136    \aftergroup\endinput
137  \fi
138 \fi
139 \endgroup

```

Package identification:

```

140 \begingroup
141  \catcode35 6 % #
142  \catcode40 12 % (
143  \catcode41 12 % )
144  \catcode44 12 % ,
145  \catcode45 12 % -
146  \catcode46 12 % .
147  \catcode47 12 % /
148  \catcode58 12 % :
149  \catcode64 11 % @
150  \catcode91 12 % [

4 Installation

4.1 Download

Package. This package is available on CTAN¹:

CTAN:macros/latex/contrib/oberdiek/embedfile.dtx The source file.

CTAN:macros/latex/contrib/oberdiek/embedfile.pdf Documentation.

Bundle. All the packages of the bundle ‘oberdiek’ are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

CTAN:install/macros/latex/contrib/oberdiek.tds.zip

TDS refers to the standard “A Directory Structure for *\TeX* Files” (CTAN:tds/tds.pdf). Directories with `texmf` in their name are usually organized this way.

¹[ftp://ftp.ctan.org/tex-archive/](http://ftp.ctan.org/tex-archive/)

4.2 Bundle installation

Unpacking. Unpack the `oberdiek.tds.zip` in the TDS tree (also known as `texmf` tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

Script installation. Check the directory `TDSScripts/oberdiek/` for scripts that need further installation steps. Package `attachfile2` comes with the Perl script `pdfatfi.pl` that should be installed in such a way that it can be called as `pdfatfi`. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl  
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

4.3 Package installation

Unpacking. The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain-T_EX:

```
tex embedfile.dtx
```

TDS. Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

<code>embedfile.sty</code>	→ <code>tex/latex/oberdiek/embedfile.sty</code>
<code>dtx-attach.sty</code>	→ <code>tex/latex/oberdiek/dtx-attach.sty</code>
<code>embedfile.pdf</code>	→ <code>doc/latex/oberdiek/embedfile.pdf</code>
<code>embedfile-example-plain.tex</code>	→ <code>doc/latex/oberdiek/embedfile-example-plain.tex</code>
<code>embedfile-example-collection.tex</code>	→ <code>doc/latex/oberdiek/embedfile-example-collection.tex</code>
<code>test/embedfile-test1.tex</code>	→ <code>doc/latex/oberdiek/test/embedfile-test1.tex</code>
<code>test/embedfile-test2.tex</code>	→ <code>doc/latex/oberdiek/test/embedfile-test2.tex</code>
<code>test/embedfile-test3.tex</code>	→ <code>doc/latex/oberdiek/test/embedfile-test3.tex</code>
<code>embedfile.dtx</code>	→ <code>source/latex/oberdiek/embedfile.dtx</code>

If you have a `docstrip.cfg` that configures and enables `docstrip`'s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

4.4 Refresh file name databases

If your T_EX distribution (teT_EX, mikT_EX, ...) relies on file name databases, you must refresh these. For example, teT_EX users run `texhash` or `mktexlsr`.

4.5 Some details for the interested

Attached source. The PDF documentation on CTAN also includes the `.dtx` source file. It can be extracted by AcrobatReader 6 or higher. Another option is `pdftk`, e.g. unpack the file into the current directory:

```
pdftk embedfile.pdf unpack_files output .
```

Unpacking with L^AT_EX. The `.dtx` chooses its action depending on the format:

plain-T_EX: Run `docstrip` and extract the files.

L^AT_EX: Generate the documentation.

If you insist on using L^AT_EX for `docstrip` (really, `docstrip` does not need L^AT_EX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{embedfile.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by the configuration file `ltxdoc.cfg`. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfL^AT_EX:

```
pdflatex embedfile.dtx
makeindex -s gind.ist embedfile.idx
pdflatex embedfile.dtx
makeindex -s gind.ist embedfile.idx
pdflatex embedfile.dtx
```

6 History

[2006/08/16 v1.0]

- First public version.

[2007/04/11 v1.1]

- Line ends sanitized.

[2007/09/09 v1.2]

- Fixes for plain-TeX, wrapper for package `keyval` added.
- Catcode section rewritten.

[2007/10/28 v2.0]

- Collection support added (PDF 1.7).

[2007/10/29 v2.1]

- Export of object references by adding new option `id` and new macros `\embedfileifobjectexists` and `\embedfilegetobject`.

[2007/11/11 v2.2]

- Use of package `pdfTEXcmds` for LUAT_EX support.

- Fix in use of `\pdf@filesize`, bug introduced in previous version.

7 Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; numbers in roman refer to the code lines where the entry is used.
