

The `engord` package

Heiko Oberdiek
<oberdiek@uni-freiburg.de>

2007/04/26 v1.4

Abstract

The package generates the suffix of English ordinal numbers. It can be used with plain and L^AT_EX formats.

1 Usage

`\engord{<LATEX counter name>}`

It prints the value of the L^AT_EX counter as English ordinal number. It can be used in the same way as `\arabic`, `\roman`, or `\alph`. The command is not available in plain-T_EX.

`\engordnumber{<any TEX number>}`

It prints the number as English ordinal number.

`\engordletters{#1}`

This command formats the English ordinal letters after the number. It defaults to `\textsuperscript`.

`\engorderror{#1}`

It can be redefined, if an other error handling is wanted. The argument is a negative number or zero.

`\engordraisetrue`
`\engordraisefalse`

These commands set the switch `\ifengordraise` that is asked by the default `\engordletters` before raising the ordinal letters.

1.1 Package options

normal: `\engordraisefalse`

raise: `\engordraisetrue`

Default is raise.

1.2 Examples

- ```
\usepackage[normal]{engord}
\engordnumber{1} → 1st
\engordnumber{12} → 12th
\engordnumber{123} → 123rd
\engord{page} → 1st (if page has the value of one)
\engordraisetrue
\engordnumber{12} → 12th
```

- The default output of a counter can be redefined:

```
\newcounter{mycounter}
\renewcommand{\theengcounter}{\engord{mycounter}}
```

- Because the implementation of `\engord` and `\engordnumber` is kept expandable, these commands can be used to make command names with an appropriate definition of `\engordletters`:

```
\renewcommand*{\engordletters}[1]{#1}
\@namedef{My\engordnumber{3}Command}{...}
```

This generates the command name ‘`My4rdCommand`’. Since version 1.2 the redefinition can be dropped if the letters are not raised.

- If the letters should not be raised, use L<sup>A</sup>T<sub>E</sub>X package option `normal` or use

```
\engordraisefalse
```

Also `\engordletters` could be redefined for this purpose:

```
\renewcommand*{\engordletters}[1]{#1}
```

## 2 Implementation

### 2.1 Reload check and identification

```
1 (*package)
```

Reload check, especially if the package is not used with L<sup>A</sup>T<sub>E</sub>X.

```
2 \begingroup
3 \catcode44 12 % ,
4 \catcode45 12 % -
5 \catcode46 12 % .
6 \catcode58 12 % :
7 \catcode64 11 % @

47 }%
48 \fi
49 \expandafter\x\csname ver@engord.sty\endcsname
50 \ProvidesPackage{engord}%
51 [2007/04/26 v1.4 Provides the ifpdf switch (H0)]
```

### 2.2 Help commands for plain compatibility

\EO@atcode Save catcode of @.

```
52 \expandafter\chardef\csname EO@atcode\endcsname\catcode'\@
53 \catcode'\@=11 %
```

`\EO@def` Definitions, `\newcommand` does not exist in plain- $\TeX$ .

```

54 \begingroup\expandafter\expandafter\expandafter\endgroup
55 \expandafter\ifx\csname newcommand\endcsname\relax
56 \def\EO@def{\def}%
57 \else
58 \def\EO@def#1{%
59 \newcommand*{#1}{}%
60 \def#1%
61 }%
62 \fi

63 \begingroup\expandafter\expandafter\expandafter\endgroup
64 \expandafter\ifx\csname RequirePackage\endcsname\relax
65 \input infwarerr.sty\relax
66 \else
67 \RequirePackage{infwarerr}%
68 \fi

```

## 2.3 User macros

`\ifengordraise` The switch `\ifengordraise`, whether the ordinal letters are raised or not. Default is raised because of compatibility.

```

69 \newif\ifengordraise
70 \engordraisetrue

```

In  $\LaTeX$  this also can be controlled by option `normal` or `raise`.

```

71 \begingroup\expandafter\expandafter\expandafter\endgroup
72 \expandafter\ifx\csname DeclareOption\endcsname\relax
73 \else
74 \DeclareOption{normal}{\engordraisefalse}%
75 \DeclareOption{raise}{\engordraisetrue}%
76 \ProcessOptions*\relax
77 \fi

```

`\engordletters` `\engordletters` is called with one argument, the english ordinal letters, and contains the code to format them. It defaults to `\textsuperscript` depending on `\ifengordraise`.

```

78 \expandafter\ifx\csname engordletters\endcsname\relax
79 \EO@def\engordletters{%
80 \ifengordraise
81 \expandafter\engordtextsuperscript
82 \fi
83 }%
84 \fi

```

`\engordtextsuperscript` For plain- $\TeX$  the definition is quite ugly, redefine `\engordtextsuperscript` if you have a better one.

```

85 \expandafter\ifx\csname engordtextsuperscript\endcsname\relax
86 \begingroup\expandafter\expandafter\expandafter\endgroup
87 \expandafter\ifx\csname textsuperscript\endcsname\relax
88 \def\engordtextsuperscript#1{%
89 \relax
90 \ifmmode
91 ~{\rm#1}%
92 \else
93 ${\rm#1}$%
94 \fi
95 }%
96 \else
97 \def\engordtextsuperscript{\textsuperscript}%
98 \fi
99 \fi

```

`\engorderror` `\engorderror` is called, if the number is zero or negative.

```

100 \expandafter\ifx\csname engorderror\endcsname\relax
101 \EO@def\engorderror#1{%
102 #1\engordletters{!ERROR!}%
103 \@PackageWarning{engord}{%
104 ‘#1’ is not an ordinal number%
105 }%
106 }%
107 \fi

```

`\engord` `\engord` expects a L<sup>A</sup>T<sub>E</sub>X counter name as argument and calls `\engordnumber`. It is defined only, if L<sup>A</sup>T<sub>E</sub>X is used.

```

108 \begingroup\expandafter\expandafter\expandafter\endgroup
109 \expandafter\ifx\csname newcounter\endcsname\relax
110 \else
111 \EO@def\engord#1{%
112 \engordnumber{\value{#1}}%
113 }%
114 \fi

```

`\engordnumber` `\engordnumber` is the user command to print a number as english ordinal number. The argument can be any T<sub>E</sub>X number like explicit numbers, register values, ...

In a safe way it converts the T<sub>E</sub>X number argument into a form that only consists of decimal digits.

```

115 \EO@def\engordnumber#1{%
116 \expandafter\EO@number\expandafter{\number#1}%
117 }

```

## 2.4 Suffix generation

`\EO@number` `\EO@number` expects a number with decimal digits as argument and looks at the size of the number and the count of the digits:

```

118 \def\EO@number#1{%
119 \ifnum#1<1 % handle the error case
120 \engorderror{#1}%
121 \else
122 \ifnum#1<21 %
123 \EO@ord{#1}%
124 \else
125 \ifnum#1<100 %
126 \EO@twodigits#1%
127 \else
128 \@ReturnAfterFi{%
129 \EO@reverse#1\@nil}\EO@afterreverse
130 }%
131 \fi
132 \fi
133 \fi
134 }

```

`\@ReturnAfterFi` An internal help macro to prevent a too deep `\if` nesting.

```

135 \long\def\@ReturnAfterFi#1\fi{\fi#1}

```

`\EO@ord` `\EO@ord` prints the number with ord letters.

#1: decimal digits, #1 < 21

```

136 \def\EO@ord#1{%
137 #1%
138 \expandafter\engordletters
139 \ifcase#1{th}\or
140 {st}\or
141 {nd}\or

```

```

142 {rd}\else
143 {th}%
144 \fi
145 }

\EO@twodigits \EO@twodigits expects a number with two digits,
20 < number < 100
146 \def\EO@twodigits#1#2{%
147 #1\EO@ord{#2}%
148 }

\EO@reverse \EO@reverse reverses the digits of the number.
#1: next digit
#2: rest of the digits
#3: already reversed digits
#4: next command to call with the reversed number as argument
149 \def\EO@reverse#1#2\@nil#3#4{%
150 \ifx\#2\%
151 #4{#1#3}%
152 \else
153 \@ReturnAfterFi{%
154 \EO@reverse#2\@nil{#1#3}{#4}%
155 }%
156 \fi
157 }

\EO@afterreverse \EO@afterreverse calls \EO@reverseback so that \EO@reverseback can inspect
the digits of the number.
158 \def\EO@afterreverse#1{%
159 \EO@reverseback#1\@nil
160 }

\EO@reverseback \EO@reverseback reverses the reversion.
#1: the last digit of the number
#2: the second last digit of the number
#3: first digits of the number in reversed order, it is not empty, because
\EO@reverseback is only called with numbers > 100.
161 \def\EO@reverseback#1#2#3\@nil{%
162 \EO@reverse#3\@nil{}\@firstofone
163 \ifnum#2#1<21 %
164 \EO@ord{#2#1}%
165 \else
166 #2\EO@ord{#1}%
167 \fi
168 }

Restore catcode of @.
169 \catcode'\@=\EO@atcode
170 </package>

```

## 3 Installation

### 3.1 Download

**Package.** This package is available on CTAN<sup>1</sup>:

[CTAN:macros/latex/contrib/oberdiek/engord.dtx](http://ftp.ctan.org/tex-archive/macros/latex/contrib/oberdiek/engord.dtx) The source file.

[CTAN:macros/latex/contrib/oberdiek/engord.pdf](http://ftp.ctan.org/tex-archive/macros/latex/contrib/oberdiek/engord.pdf) Documentation.

---

<sup>1</sup>[ftp://ftp.ctan.org/tex-archive/](http://ftp.ctan.org/tex-archive/)

**Bundle.** All the packages of the bundle ‘oberdiek’ are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

CTAN:macros/latex/contrib/oberdiek/oberdiek-tds.zip

## 3.2 Bundle installation

**Unpacking.** Unpack the oberdiek-tds.zip in the TDS tree (also known as texmf tree) of your choice. Example (linux):

```
unzip oberdiek-tds.zip -d ~/texmf
```

**Script installation.** Check the directory TDS:scripts/oberdiek/ for scripts that need further installation steps. Package attachfile2 comes with the Perl script pdfatfi.pl that should be installed in such a way that it can be called as pdfatfi. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

## 3.3 Package installation

**Unpacking.** The .dtx file is a self-extracting docstrip archive. The files are extracted by running the .dtx through plain-TeX:

```
tex engord.dtx
```

**TDS.** Now the different files must be moved into the different directories in your installation TDS tree (also known as texmf tree):

```
engord.sty → tex/generic/oberdiek/engord.sty
engord.pdf → doc/latex/oberdiek/engord.pdf
engord.dtx → source/latex/oberdiek/engord.dtx
```

If you have a docstrip.cfg that configures and enables docstrip’s TDS installing feature, then some files can already be in the right place, see the documentation of docstrip.

## 3.4 Refresh file name databases

If your TeX distribution (TeX, MikTeX, ...) relies on file name databases, you must refresh these. For example, TeX users run texhash or mktexlsr.

## 3.5 Some details for the interested

**Attached source.** The PDF documentation on CTAN also includes the .dtx source file. It can be extracted by AcrobatReader 6 or higher. Another option is pdftk, e.g. unpack the file into the current directory:

```
pdftk engord.pdf unpack_files output .
```

**Unpacking with L<sup>A</sup>TeX.** The .dtx chooses its action depending on the format:

**plain-TeX:** Run docstrip and extract the files.

**L<sup>A</sup>TeX:** Generate the documentation.

If you insist on using L<sup>A</sup>TeX for docstrip (really, docstrip does not need L<sup>A</sup>TeX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{engord.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

**Generating the documentation.** You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by the configuration file `ltxdoc.cfg`. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfL<sup>A</sup>T<sub>E</sub>X:

```
pdflatex engord.dtx
makeindex -s gind.ist engord.idx
pdflatex engord.dtx
makeindex -s gind.ist engord.idx
pdflatex engord.dtx
```

## 4 History

[2000/05/23 v1.0]

- First public release.

[2003/04/28 v1.1]

- Bug fix for 30, 40, 50, ..., 100, 130, ...
- `\ordletters` renamed to documented `\engordletters`.

[2006/02/20 v1.2]

- Support for plain- $\text{\TeX}$ .
- Switch `\ifengordraise` added.
- Package options `raise` and `normal` added.
- DTX framework.

[2007/04/11 v1.3]

- Line ends sanitized.

[2007/04/26 v1.4]

- Use of package `infwarerr`.

## 5 Index

Numbers written in *italic* refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; numbers in *roman* refer to the code lines where the entry is used.

| Symbols          |                              | 6, 7, 31, 32, 33, 34, 35, 52, 53, 169 |                                      |
