

# The `holo` package

Heiko Oberdiek\*  
<heiko.oberdiek at googlemail.com>

2017/05/01 v1.13

## Abstract

This package starts a collection of logos with support for bookmarks strings.

# 1 Documentation

## 1.1 Logo macros

`\hologo {\langle name\rangle}`

Macro `\hologo` sets the logo with name  $\langle name \rangle$ . The following table shows the supported names.

name	variant	logo	since
(La)TeX		(La)TeX	2011/10/01
AmSLaTeX		$\mathcal{A}\mathcal{M}\mathcal{S}$ -LATEX	2010/04/16
AmSTeX		$\mathcal{A}\mathcal{M}\mathcal{S}$ -TeX	2010/04/16
biber		biber	2011/10/01
BibTeX		BIBTeX	2011/10/01
BibTeX	sf	BIBTeX	2011/10/01
BibTeX	sc	BIBTeX	2011/10/01
BibTeX8		BIBTeX8	2011/11/22
ConTeXt		ConTeXt	2011/03/25
ConTeXt	narrow	ConTeXt	2011/03/25
ConTeXt	simple	ConTeXt	2011/03/25
emTeX		emTeX	2010/04/26
eTeX		$\varepsilon$ -TeX	2010/04/08
ExTeX		$\varepsilon_X$ TeX	2011/10/01
HanTheThanh		Hàn Thé Thành	2011/11/29
iniTeX		iniTeX	2011/10/01
KOMAScript		KOMA-Script	2011/10/01
La		LA	2010/05/08
LaTeX		LATEX	2010/04/08
LaTeX2e		LATEX 2 $\varepsilon$	2010/04/08
LaTeX3		LATEX3	2010/04/24
LaTeXe		LATEX 2 $\varepsilon$	2010/04/08

XeLaTeX		XeL <sub>A</sub> T <sub>E</sub> X	2010/04/08
XeTeX		XeT <sub>E</sub> X	2010/04/08

`\Hologo {<name>}`

Macro `\Hologo` starts the logo `<name>` with an uppercase letter. As an exception small greek letters are not converted to uppercase. Examples, see  $\varepsilon$ -T<sub>E</sub>X and  $\varepsilon_X$ T<sub>E</sub>X.

## 1.2 Setup macros

The package does not support package options, but the following setup macros can be used to set options.

`\hologoSetup {<key value list>}`

Macro `\hologoSetup` sets global options.

`\hologoLogoSetup {<logo>} {<key value list>}`

Some options can also be used to configure a logo. These settings take precedence over global option settings.

## 1.3 Options

There are boolean and string options:

**Boolean option:** It takes `true` or `false` as value. If the value is omitted, then `true` is used.

**String option:** A value must be given as string. (But the string might be empty.)

The following options can be used both in `\hologoSetup` and `\hologoLogoSetup`:

**break:** enables or disables line breaks inside the logo. This setting is refined by options `hyphenbreak`, `spacebreak` or `discretionarybreak`. Default is `false`.

**hyphenbreak:** enables or disables the line break right after the hyphen character.

**spacebreak:** enables or disables line breaks at space characters.

**discretionarybreak:** enables or disables line breaks at hyphenation points (inserted by \-).

Macro `\hologoLogoSetup` also knows:

**variant:** This is a string option. It specifies a variant of a logo that must exist.  
An empty string selects the package default variant.

Example:

```
\hologoSetup{break=false}
\hologoLogoSetup{plainTeX}{variant=hyphen,hyphenbreak}
Then "plain-TeX" contains one break point after the hyphen.
```

## 1.4 Driver options

Sometimes graphical operations are needed to construct some glyphs (e.g. X<sub>E</sub>T<sub>E</sub>X). If package `graphics` or package `pgf` are found, then the macros are taken from there. Otherwise the package defines its own operations and therefore needs the driver information. Many drivers are detected automatically (pdfT<sub>E</sub>X/LuaT<sub>E</sub>X in PDF mode, X<sub>E</sub>T<sub>E</sub>X, V<sub>T</sub>E<sub>X</sub>). These have precedence over a driver option. The driver can be given as package option or using `\hologoDriverSetup`. The following list contains the recognized driver options:

- pdfTeX, l<sub>u</sub>a<sub>t</sub>e<sub>x</sub>
- dvipdfm, dvipdfmx
- dvips, dvipsone, xdvi
- xetex
- vtex

The left driver of a line is the driver name that is used internally. The following names are aliases for drivers that use the same method. Therefore the entry in the `.log` file for the used driver prints the internally used driver name.

**driverfallback:** This option expects a driver that is used, if the driver could not be detected automatically.

```
\hologoDriverSetup {\langle driver option\rangle}
```

The driver can also be configured after package loading using `\hologoDriverSetup`, also the way for plain T<sub>E</sub>X to setup the driver.

## 1.5 Font setup

Some logos require a special font, but should also be usable by plain T<sub>E</sub>X. Therefore the package provides some ways to influence the font settings. The options below take font settings as values. Both font commands such as `\sffamily` and macros that take one argument like `\textsf` can be used.

```
\hologoFontSetup {\langle key value list\rangle}
```

Macro `\hologoFontSetup` sets the fonts for all logos. Supported keys:

**general:** This font is used for all logos. The default is empty. That means no special font is used.

**bibsf:** This font is used for BIBTEX with variant sf.

**rm:** This font is a serif font. It is used for  $\varepsilon_X$ TEX.

**sc:** This font specifies a small caps font. It is used for BIBTEX with variant sc.

**sf:** This font specifies a sans serif font. The default is \sffamily, then \sf is tried. Otherwise a warning is given. It is used by KOMA-Script.

**sy:** This is the font for math symbols (e.g. cmsy). It is used by  $\mathcal{AM}$ S,  $\mathcal{NT}$ S,  $\varepsilon_X$ TEX.

**logo:** METAFONT and METAPOST are using that font. In LATEX \logofamily is used and the definitions of package `mflogo` are used if the package is not loaded. Otherwise the \tenlogo is used and defined if it does not already exists.

<code>\hologoLogoFontSetup {\langle logo \rangle} {\langle key value list \rangle}</code>
---

Fonts can also be set for a logo or logo component separately, see the following list. The keys are the same as for \hologoFontSetup.

$\langle \text{logo} \rangle$	keys	result
BibTeX	bibsf	B <small>I</small> B <small>T</small> E <small>X</small>
BibTeX	sc	B <small>I</small> B <small>T</small> E <small>X</small>
ExTeX	rm	$\varepsilon_X$ T <small>E</small> X
SliTeX	rm	SLI <small>T</small> E <small>X</small>
AmS	sy	$\mathcal{AM}$ S
ExTeX	sy	$\varepsilon_X$ T <small>E</small> X
NTS	sy	$\mathcal{NT}$ S
KOMAScript	sf	KOMA-Script
METAFONT	logo	METAFONT
METAPOST	logo	METAPOST
SliTeX	sc	SLI <small>T</small> E <small>X</small>

### 1.5.1 Font order

For all logos the font general is applied first. Example:

```
\hologoFontSetup{general=\color{red}}
```

will print red logos. Then if the font uses a special font sf, for example, the font is applied that is setup by \hologoLogoFontSetup. If this font is not setup, then the common font setup by \hologoFontSetup is used. Otherwise a warning is given, that there is no font configured.

## 1.6 Additional user macros

Usually a variant of a logo is configured by using \hologoLogoSetup, because it is bad style to mix different variants of the same logo in the same text. There the following macros are a convenience for testing.

```
\hologoVariant {\<name>} {\<variant>}
\HologoVariant {\<name>} {\<variant>}
```

Logo  $\langle name \rangle$  is set using  $\langle variant \rangle$  that specifies explicitly which variant of the macro is used. If the argument is empty, then the default form of the logo is used (configurable by `\hologoLogoSetup`).

`\HologoVariant` is used if the logo is set in a context that needs an uppercase first letter (beginning of a sentence, ...).

```
\hologoList
\hologoEntry {\<logo>} {\<variant>} {\<since>}
```

Macro `\hologoList` contains all logos that are provided by the package including variants. The list consists of calls of `\hologoEntry` with three arguments starting with the logo name  $\langle logo \rangle$  and its variant  $\langle variant \rangle$ . An empty variant means the current default. Argument  $\langle since \rangle$  specifies with version of the package `hologo` is needed to get the logo. If the logo is fixed, then the date gets updated. Therefore the date  $\langle since \rangle$  is not exactly the date of the first introduction, but rather the date of the latest fix.

Before `\hologoList` can be used, macro `\hologoEntry` needs a definition. The example file in section 1.8 shows applications of `\hologoList`.

## 1.7 Supported contexts

Macros `\hologo` and friends support special contexts:

- `\LaTeX`'s protection mechanism.
- Bookmarks of package `hyperref`.
- Package `tex4ht`.
- The macros can be used inside `\csname` constructs, if `\ifin csname` is available (`pdfTeX`, `XeTeX`, `LuaTeX`).

## 1.8 Example

The following example prints the logos in different fonts.

```
1 /*example)
2 %<<verbatim
3 \NeedsTeXFormat{LaTeX2e}
4 \documentclass[a4paper]{article}
5 \usepackage[
6   hmargin=20mm,
7   vmargin=20mm,
8 ]{geometry}
9 \pagestyle{empty}
10 \usepackage{hologo}[2017/05/01]
11 \usepackage{longtable}
12 \usepackage{array}
13 \setlength{\extrarowheight}{2pt}
14 \usepackage[T1]{fontenc}

### 3.2 Spacefactor

The space factor must be 1000 after a logo. If it is greater 1000 then the following space is a space after a sentence closing point. If the space factor is smaller 1000 then an immediate following dot is interpreted as abbreviation, not sentence closing point.

```

## 4 Installation

### 4.1 Download

**Package.** This package is available on CTAN<sup>1</sup>:

[CTAN:macros/latex/contrib/oberdiek/hologo.dtx](http://ctan.org/pkg/hologo) The source file.

[CTAN:macros/latex/contrib/oberdiek/hologo.pdf](http://ctan.org/pkg/hologo) Documentation.

**Bundle.** All the packages of the bundle ‘oberdiek’ are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

[CTAN:install/macros/latex/contrib/oberdiek.tds.zip](http://ctan.org/install/macros/latex/contrib/oberdiek.tds.zip)

**TDS** refers to the standard “A Directory Structure for TeX Files” ([CTAN:tds/tds.pdf](http://ctan.org/texmf/texmf.pdf)). Directories with `texmf` in their name are usually organized this way.

### 4.2 Bundle installation

**Unpacking.** Unpack the `oberdiek.tds.zip` in the TDS tree (also known as `texmf` tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

**Script installation.** Check the directory `TDSScripts/oberdiek/` for scripts that need further installation steps. Package `attachfile2` comes with the Perl script `pdfatfi.pl` that should be installed in such a way that it can be called as `pdfatfi`. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

### 4.3 Package installation

**Unpacking.** The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain TeX:

```
tex hologo.dtx
```

**TDS.** Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

<code>hologo.sty</code>	→ <code>tex/generic/oberdiek/hologo.sty</code>
<code>hologo.pdf</code>	→ <code>doc/latex/oberdiek/hologo.pdf</code>
<code>example/hologo-example.tex</code>	→ <code>doc/latex/oberdiek/example/hologo-example.tex</code>
<code>test/hologo-test1.tex</code>	→ <code>doc/latex/oberdiek/test/hologo-test1.tex</code>
<code>test/hologo-test-spacefactor.tex</code>	→ <code>doc/latex/oberdiek/test/hologo-test-spacefactor.tex</code>
<code>test/hologo-test-list.tex</code>	→ <code>doc/latex/oberdiek/test/hologo-test-list.tex</code>
<code>hologo.dtx</code>	→ <code>source/latex/oberdiek/hologo.dtx</code>

If you have a `docstrip.cfg` that configures and enables `docstrip`’s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

---

<sup>1</sup><http://ctan.org/pkg/hologo>

## 4.4 Refresh file name databases

If your **TEX** distribution (**teTEX**, **mikTEX**, ...) relies on file name databases, you must refresh these. For example, **teTEX** users run **texhash** or **mktexlsr**.

## 4.5 Some details for the interested

**Unpacking with LATEX.** The **.dtx** chooses its action depending on the format:

**plain TEX:** Run **docstrip** and extract the files.

**LATEX:** Generate the documentation.

If you insist on using LATEX for **docstrip** (really, **docstrip** does not need LATEX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{hologo.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

**Generating the documentation.** You can use both the **.dtx** or the **.drv** to generate the documentation. The process can be configured by the configuration file **ltxdoc.cfg**. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with **pdflatEX**:

```
pdflatex hologo.dtx
makeindex -s gind.ist hologo.idx
pdflatex hologo.dtx
makeindex -s gind.ist hologo.idx
pdflatex hologo.dtx
```

## 5 Catalogue

The following XML file can be used as source for the **TEX Catalogue**. The elements **caption** and **description** are imported from the original XML file from the Catalogue. The name of the XML file in the Catalogue is **hologo.xml**.

```
2668 <catalogue>
2669 <?xml version='1.0' encoding='us-ascii'?>
2670 <!DOCTYPE entry SYSTEM 'catalogue.dtd'>
2671 <entry datestamp='$Date$' modifier='$Author$' id='hologo'>
2672   <name>hologo</name>
2673   <caption>A collection of logos with bookmark support.</caption>
2674   <authorref id='auth:oberdiek' />
2675   <copyright owner='Heiko Oberdiek' year='2010-2012' />
2676   <license type='lppl1.3' />
2677   <version number='1.10' />
2678   <description>
2679     The package defines a single command <tt>\hologo</tt>, whose
2680     argument is the usual case-confused ASCII version of the logo.
2681     The command is bookmark-enabled, so that every logo becomes
2682     available in bookmarks without further work.
2683   <p/>
2684   The package is part of the <xref refid='oberdiek'>oberdiek</xref>
2685   bundle.
2686 </description>
2687 <documentation details='Package documentation'
2688   href='ctan:/macros/latex/contrib/oberdiek/hologo.pdf' />
2689 <ctan file='true' path='/macros/latex/contrib/oberdiek/hologo.dtx' />
```

```

2690  <miktex location='oberdiek'/>
2691  <texlive location='oberdiek'/>
2692  <install path='/macros/latex/contrib/oberdiek/oberdiek.tds.zip'/'>
2693 </entry>
2694 </catalogue>
```

## 7 History

[2010/04/08 v1.0]

- The first version.

[2010/04/16 v1.1]

- \Hologo added for support of logos at start of a sentence.
- \hologoSetup and \hologoLogoSetup added.
- Options break, hyphenbreak, spacebreak added.
- Variant support added by option variant.

[2010/04/24 v1.2]

- LATEX3 added.
- VTEX added.

[2010/11/21 v1.3]

- iniTEX, virTEX added.

## [2011/03/25 v1.4]

- ConTeXt with variants added.
- Option `discretionarybreak` added as refinement for option `break`.

## [2011/04/21 v1.5]

- Wrong TDS directory for test files fixed.

## [2011/10/01 v1.6]

- Support for package `tex4ht` added.
- Support for `\csname` added if `\ifin.csname` is available.
- New logos: (L)TeX, biber, BiBTeX (sc, sf), emTeX, ε<sub>X</sub>TeX, KOMA-Script, IA, LYX, MiKTeX, NJS, OzMF, OzMP, OzTeX, OzTtH, PCTeX, PiC, PICTeX, METAFONT, MetaFun, METAPOST, MetaPost, SLiTEx (lift, narrow, simple), SLiTEx (narrow, simple, lift), teTeX.
- Fixes: iniTeX, pdfLaTeX, pdfTeX, virTeX.
- `\hologoFontSetup` and `\hologoLogoFontSetup` added.
- `\hologoVariant` and `\HologoVariant` added.

## [2011/11/22 v1.7]

- New logos: BiBTeX8, LaTEXML, SageTeX, TeX4ht, TTH.
- XE and friends: Driver stuff fixed.
- XE and friends: Support for italic added.
- XE and friends: Package support for pgf and pstricks added.

## [2011/11/29 v1.8]

- New logos: Hà Thé Thành.

## [2011/12/21 v1.9]

- Patch for package ifxetex added for the case that `\newif` is undefined in iniTeX.
- Some fixes for iniTeX.

## [2012/04/26 v1.10]

- Fix in bookmark version of logo “Hà Thé Thành”.

## [2016/05/12 v1.11]

- Update HOLOGO@IfCharExists (previously in texlive)
- define pdfliteral in current luatex.

## [2016/05/16 v1.12]

- Documentation updates.

## [2017/05/01 v1.13]

- Removing spurious comments in bibliography. (github PR from yudai-nkt)

## 8 Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; plain numbers refer to the code lines where the entry is used.
