

# The `hycolor` package

Heiko Oberdiek

<oberdiek@uni-freiburg.de>

2008/07/29 v1.2

## Abstract

Package `hycolor` implements the color option stuff that is used by packages `hyperref` and `bookmark`. It is not intended as package for the user.

# 1 Documentation

The package `hycolor` implements color options for packages `hyperref` and `bookmark`.

Package `xcolor` provides macros for extracting color values and converting color data to other color models. If this package is loaded, the full range of color specifications of packages `color` and `xcolor` are supported including the optional argument for the color model.

```
\hyperref[linkbordercolor=red]{% needs xcolor}
\hyperref[linkbordercolor=[named]{red}]{% needs xcolor}
\hyperref[linkbordercolor=[rgb]{1,0,0}]{}
```

Without package `xcolor` some of the options only support some models, if they are given directly, e.g.:

```
\bookmarksetup{color=[rgb]{1,0,0}}
```

Because of compatibility some options of `hyperref` also support space separated RGB values:

```
\hypersetup{linkbordercolor=1 0 0}{% is the same as
\hypersetup{linkbordercolor=[rgb]{1,0,0}}
```

Coloring is optional, it can be turned off by using an empty value:

```
\hypersetup{linkbordercolor={}}
```

The PDF specification knows some kind of an empty color setting without values. This applies to form field colors. The new A virtual color model `empty` is introduced for this purpose, e.g.

```
\TextField[backgroundcolor={[empty]{}, ...}]{...}{% or
\TextField[{\backgroundcolor=[empty]{}, ...}]{...}}
```

PDF specification 1.7 also allows this for border link colors. But this isn't currently supported by this package, because the tested viewers (AR7/Linux, `xpdf` 3.00, `ghostscript` 8.54) don't support this yet. In contrary `ghostscript` generates an error message.

## 1.1 Summary

Color option	Models without <code>xcolor</code>	RGB color	Model <code>empty</code>
<code>BKM.color</code>	<code>gray, rgb</code>	no	no
<code>Hyp.*color</code>	<code>all</code>	no	no
<code>Hyp.*bordercolor</code>	<code>gray, rgb</code>	yes	no
<code>Field.*color</code>	<code>gray, rgb, cmyk</code>	yes	yes
<code>AtFi.color</code>	<code>gray, rgb</code>	yes	no

“RGB color” means that the color value can be given as space separated RGB numbers (real numbers in the range from 0 to 1). Explanation of the color option prefixes:

Prefix	Explanation
<code>BKM</code>	Package <code>bookmark</code>
<code>Hyp</code>	Package <code>hyperref</code> : package options or <code>\hypersetup</code>
<code>Field</code>	Package <code>hyperref</code> : Form field options
<code>AtFi</code>	Package <code>attachfile2</code> : option <code>color</code>

## 2 Implementation

```
1 <*package>
2 \NeedsTeXFormat{LaTeX2e}
3 \ProvidesPackage{hycolor}%
4 [2008/07/29 v1.2 Code for color options of hyperref/bookmark (HO)]%
```

### 2.1 Normalization

#### 2.1.1 Sanitize value of color option

---

**Procedure** `DefSanitized(cmd, value)`

---

**Param:** `cmd` (macro)

**Param:** `value` (value of color option)

**Result:** `value` is expanded, sanitized, and stored in macro `cmd`.

Initialize active characters;

`cmd` := Expand `value`;

Sanitize `cmd`;

---

*Sanitization* means that the string does not contain any macros or special tokens. It consists of characters with catcode 12 (other). The only exception is the space with catcode 10 (space).

```
\HyColor@DefSanitized
```

```
5 \begingroup
6   \catcode`!=13 %
7   \catcode`\:=13 %
8   \catcode`\-=13 %
9   \catcode`\+=13 %
10  \catcode`\;=13 %
11  \catcode`\":=13 %
12  \catcode`\>=13 %
13  \edef\x{%
14    \def\noexpand!{\string!}%
15    \def\noexpand:{\string:}%
16    \def\noexpand-{\string-}%
17    \def\noexpand+{\string+}%
18    \def\noexpand;{\string;}%
19    \def\noexpand"{\string"}%
20    \def\noexpand>{\string>}%
21  }%
22  \def\y#1{\endgroup
23    \def\HyColor@DefSanitized##1##2{%
24      \begin{group}
25        \csname @safe@activestrue\endcsname
26        #1%
27        \edef\x{\endgroup
28          \def\noexpand##1##2{%
29            }%
30            \x
31            \onelevel@sanitize##1%
32            }%
33            }%
34 \expandafter\y\expandafter{\x}
```

### 2.1.2 Normalize result

---

**Procedure** `NormalizeNum(value, cmd)`

---

**Param:** *value* (Sanitized explicit number)  
**Param:** *cmd* (Macro that stores result)

**Result:** *cmd* contains normalized number

```

if value pt < 0pt then
    cmd  $\leftarrow$  0;
else if number before dot of value < 1 then
    cmd  $\leftarrow$  number after dot of value;
    cmd  $\leftarrow$  strip trailing zeros from cmd;
    if dot remains only then
        cmd  $\leftarrow$  0;
    end
else
    cmd  $\leftarrow$  1;
end

```

---

The number is limited to the range between 0.0 and 1.0 and formatted as short PDF number without leading or trailing zeros. The precision of the number isn't changed.

\HyColor@NormalizeNum

91   \edef#5{\HyColor@temp}%
92   \HyColor@NormalizeNum{#4}\HyColor@temp
93   \edef#5{\HyColor@temp}%
94 }

```

## 2.2 Main algorithm for color options

---

**Procedure** MainColorOptionAlgorithm(*key, value, cmd*)

---

**Param:** *key* (name of color option)

**Param:** *value* (value of color option)

**Param:** *cmd* (macro that stores result)

**Result:** Macro *cmd* contains the calculated color specification string or has the meaning of `\relax` if the color must not set

DefSanitized(*temp, value*);

Call option specific algorithm(*key, temp, cmd*);

---

## 2.3 Package bookmark

Since v0.8 2007/03/27 package `bookmark` only provides one color option `color`. Because option `rgbcolor` can easily given as color specification in model `rgb`:

`rgbcolor=<r> <g> <b> ≡ color=[rgb]{<r>,<g>,<b>}`

Package `bookmark` stores the result in macro `\BKM@color`. The empty string is interpreted as *no color*.

---

**Procedure** `BookmarkColor(value, cmd, package, option)`

---

**Param:** `value` (value of option `color`)  
**Param:** `cmd` (macro for result)  
**Param:** `package` (package name for error message)  
**Param:** `option` (option name for error message)

```

switch value do
  case empty
    cmd  $\leftarrow$  no color;
  end
  case with model
    if with xcolor then
      cmd  $\leftarrow$  ConvertToRGB(model, values);
    else
      if model = rgb then
        cmd  $\leftarrow$  values as normalized values;
      else if model = gray then
        cmd  $\leftarrow$  values as normalized tripled values;
      else
        error;
      end
    end
  end
  otherwise
    if with xcolor then
      (model, values  $\leftarrow$  get model and values;
      cmd  $\leftarrow$  ConvertToRGB(model, values);
    else
      error;
    end
  end
end

```

---

```

## 2.6 Package **attachfile2**

Before PDF-1.7 only RGB values are permitted in annotations. Since PDF-1.7 the color entry in annotations understands several color models, depending on the size of the color array:

- Zero entries: means transparent, not useful for file attachments. AR7/Linux and AR8/Linux show black instead.
- One entry: color model ‘gray’.
- Three entries: color model ‘rgb’.
- Four entries: color model ‘cmyk’.

An empty color specification is interpreted as “no color”.

## 4 Installation

### 4.1 Download

**Package.** This package is available on CTAN<sup>1</sup>:

<CTAN:macros/latex/contrib/oberdiek/hycolor.dtx> The source file.

<CTAN:macros/latex/contrib/oberdiek/hycolor.pdf> Documentation.

**Bundle.** All the packages of the bundle ‘oberdiek’ are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

<CTAN:install/macros/latex/contrib/oberdiek.tds.zip>

TDS refers to the standard “A Directory Structure for TeX Files” (<CTAN:tds/tds.pdf>). Directories with `texmf` in their name are usually organized this way.

### 4.2 Bundle installation

**Unpacking.** Unpack the `oberdiek.tds.zip` in the TDS tree (also known as `texmf` tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

**Script installation.** Check the directory `TDSScripts/oberdiek/` for scripts that need further installation steps. Package `attachfile2` comes with the Perl script `pdfatfi.pl` that should be installed in such a way that it can be called as `pdfatfi`. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

### 4.3 Package installation

**Unpacking.** The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain-Tex:

```
tex hycolor.dtx
```

**TDS.** Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

<code>hycolor.sty</code>	→ <code>tex/latex/oberdiek/hycolor.sty</code>
<code>hycolor.pdf</code>	→ <code>doc/latex/oberdiek/hycolor.pdf</code>
<code>test/hycolor-test1.tex</code>	→ <code>doc/latex/oberdiek/test/hycolor-test1.tex</code>
<code>test/hycolor-test2.tex</code>	→ <code>doc/latex/oberdiek/test/hycolor-test2.tex</code>
<code>test/hycolor-test3.tex</code>	→ <code>doc/latex/oberdiek/test/hycolor-test3.tex</code>
<code>hycolor.dtx</code>	→ <code>source/latex/oberdiek/hycolor.dtx</code>

If you have a `docstrip.cfg` that configures and enables `docstrip`’s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

### 4.4 Refresh file name databases

If your Tex distribution (teTeX, mikTeX, ...) relies on file name databases, you must refresh these. For example, teTeX users run `texhash` or `mktexlsr`.

---

<sup>1</sup><ftp://ftp.ctan.org/tex-archive/>

## 4.5 Some details for the interested

**Attached source.** The PDF documentation on CTAN also includes the `.dtx` source file. It can be extracted by AcrobatReader 6 or higher. Another option is `pdftk`, e.g. unpack the file into the current directory:

```
pdftk hycolor.pdf unpack_files output .
```

**Unpacking with L<sup>A</sup>T<sub>E</sub>X.** The `.dtx` chooses its action depending on the format:

**plain-T<sub>E</sub>X:** Run `docstrip` and extract the files.

**L<sup>A</sup>T<sub>E</sub>X:** Generate the documentation.

If you insist on using L<sup>A</sup>T<sub>E</sub>X for `docstrip` (really, `docstrip` does not need L<sup>A</sup>T<sub>E</sub>X), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{hycolor.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

**Generating the documentation.** You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by the configuration file `ltxdoc.cfg`. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfL<sup>A</sup>T<sub>E</sub>X:

```
pdflatex hycolor.dtx
makeindex -s gind.ist hycolor.idx
pdflatex hycolor.dtx
makeindex -s gind.ist hycolor.idx
pdflatex hycolor.dtx
```

## 5 History

[2007/04/09 v1.0]

- First version.

[2007/04/11 v1.1]

- Line ends sanitized.

[2008/07/29 v1.2]

- Support for package `attachfile2` added.

## 6 Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; numbers in roman refer to the code lines where the entry is used.
