

The `ifvtex` package

Heiko Oberdiek
`<oberdiek@uni-freiburg.de>`

2007/01/10 v1.2

Abstract

This package looks for VTeX, implements and sets the switches `\ifvtex`, `\ifvtex<mode>`, `\ifvtexgex`. It works with plain or LATEX formats.

5	Index	6

1 Usage

The package ifvtex can be used with both plain-TEX and LATEX:

plain-TEX: `\input ifvtex.sty`

LATEX 2 ε : `\usepackage{ifvtex}`

The package implements switches for VTeX and its different modes and interprets `\VTeXversion`, `\OpMode`, and `\gexmode`.

`\ifvtex`

The package provides the switch `\ifvtex`:

```
\ifvtex
... do things, if VTeX is running ...
\else
... other TEX compiler ...
\fi
```

Users of the package `ifthen` can use the switch as boolean:

```
\boolean{ifvtex}
```

\ifvtexdvi
\ifvtexpdf
\ifvtexps
\ifvtexhtml

VTeX knows different output modes that can be asked by these switches.

\ifvtexgex

This switch shows, whether GeX is available.

2 Implementation

2.1 Reload check and package identification

```
1 {*package}
```

Reload check, especially if the package is not used with L^AT_EX.

```

51 [2007/01/10 v1.2 Switches for detecting VTeX and its modes (HO)]

```

2.2 Check for previously defined \ifvtex

```

52 \begingroup
53  \expandafter\ifx\csname ifvtex\endcsname\relax
54  \else
55      \edef\i{\expandafter\string\csname ifvtex\endcsname}%
56  \expandafter\ifx\csname PackageError\endcsname\relax
57      \def\x#1#2{%
58          \edef\z{#2}%
59          \expandafter\errhelp\expandafter{\z}%
60          \errmessage{Package ifvtex Error: #1}%
61      }%
62      \def\y{^J}%
63      \newlinechar=10 %
64  \else
65      \def\x#1#2{%
66          \PackageError{ifvtex}{#1}{#2}%
67      }%
68      \def\y{\MessageBreak}%
69  \fi
70  \x{Name clash, \i/ is already defined}%
71      Incompatible versions of \i/ can cause problems,\y
72      therefore package loading is aborted.%
73  }%
74  \endgroup
75  \expandafter\endinput
76  \fi
77 \endgroup

```

2.3 \ifvtex

\ifvtex Create and set the switch. `\newif` initializes the switch with `\iffalse`.

```

78 \newif\ifvtex
79 \begingroup\expandafter\expandafter\expandafter\endgroup
80 \expandafter\ifx\csname VTeXversion\endcsname\relax
81 \else
82     \begingroup\expandafter\expandafter\expandafter\endgroup
83     \expandafter\ifx\csname OpMode\endcsname\relax
84     \else
85         \vtexttrue
86     \fi
87 \fi

```

2.4 Mode and GeX switches

```
88 \newif\ifvtxdvi
89 \newif\ifvtxpdf
90 \newif\ifvtxps
91 \newif\ifvtxhtml
92 \newif\ifvtxgex
93 \ifvtx
94   \ifcase\OpMode\relax
95     \vtxdvitrue
96   \or % 1
97     \vtxpdftrue
98   \or % 2
99     \vtxpstrue

137 </package>
```

3 Installation

3.1 Download

Package. This package is available on CTAN¹:

`CTAN:macros/latex/contrib/oberdiek/ifvtex.dtx` The source file.

`CTAN:macros/latex/contrib/oberdiek/ifvtex.pdf` Documentation.

Bundle. All the packages of the bundle ‘oberdiek’ are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

`CTAN:macros/latex/contrib/oberdiek/oberdiek-tds.zip`

3.2 Bundle installation

Unpacking. Unpack the `oberdiek-tds.zip` in the TDS tree (also known as `texmf` tree) of your choice. Example (linux):

```
unzip oberdiek-tds.zip -d ~/texmf
```

Script installation. Check the directory `TDSScripts/oberdiek/` for scripts that need further installation steps. Package `attachfile2` comes with the Perl script `pdfatfi.pl` that should be installed in such a way that it can be called as `pdfatfi`. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

3.3 Package installation

Unpacking. The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain-TEX:

```
tex ifvtex.dtx
```

TDS. Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

```
ifvtex.sty  →  tex/generic/oberdiek/ifvtex.sty
ifvtex.pdf  →  doc/latex/oberdiek/ifvtex.pdf
ifvtex.dtx  →  source/latex/oberdiek/ifvtex.dtx
```

If you have a `docstrip.cfg` that configures and enables `docstrip`’s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

3.4 Refresh file name databases

If your TEX distribution (teTeX, mikTeX, ...) relies on file name databases, you must refresh these. For example, teTeX users run `texhash` or `mktexlsr`.

3.5 Some details for the interested

Attached source. The PDF documentation on CTAN also includes the `.dtx` source file. It can be extracted by AcrobatReader 6 or higher. Another option is `pdftk`, e.g. unpack the file into the current directory:

```
pdftk ifvtex.pdf unpack_files output .
```

¹<http://ftp.ctan.org/tex-archive/>

Unpacking with L^AT_EX. The .dtx chooses its action depending on the format:

plain-T_EX: Run docstrip and extract the files.

L^AT_EX: Generate the documentation.

If you insist on using L^AT_EX for docstrip (really, docstrip does not need L^AT_EX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{ifvtex.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the .dtx or the .drv to generate the documentation. The process can be configured by the configuration file ltxdoc.cfg. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdflL^AT_EX:

```
pdflatex ifvtex.dtx
makeindex -s gind.ist ifvtex.idx
pdflatex ifvtex.dtx
makeindex -s gind.ist ifvtex.idx
pdflatex ifvtex.dtx
```

4 History

[2001/09/26 v1.0]

- First public version.

[2006/02/20 v1.1]

- DTX framework.
- Undefined tests changed.

[2007/01/10 v1.2]

- Fix of the \ProvidesPackage description.

5 Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; numbers in roman refer to the code lines where the entry is used.
