

The ltxcmds package

Heiko Oberdiek
<oberdiek@uni-freiburg.de>

2009/12/12 v1.1

Abstract

The package ltxcmds exports some utility macros from the L^AT_EX kernel into a separate namespace and also provides them for other formats such as plain-T_EX.

1 Documentation

1.1 Introduction

Many of my packages also support other formats such as plain- \TeX . Because I am rather familiar with the utility macros from \LaTeX 's kernel (e.g. \@gobble , \@firstoftwo), I found myself rewriting them again and again, because they are lacking in plain- \TeX .

Therefore this package provides often used macros and similar ones with the name prefix \ltx@ . This avoids also faulty redefinitions. I remember an example where a package redefined \@firstoftwo with forgetting \long .

1.2 Argument killers

$\text{\ltx@gobble} \{\langle 1 \rangle\}$	\rightarrow
$\text{\ltx@gobbletwo} \{\langle 1 \rangle\} \{\langle 2 \rangle\}$	\rightarrow
$\text{\ltx@gobblethree} \{\langle 1 \rangle\} \{\langle 2 \rangle\} \{\langle 3 \rangle\}$	\rightarrow
$\text{\ltx@gobblefour} \{\langle 1 \rangle\} \{\langle 2 \rangle\} \{\langle 3 \rangle\} \{\langle 4 \rangle\}$	\rightarrow

1.3 Argument grabbers

$\text{\ltx@firstofone} \{\langle 1 \rangle\}$	\rightarrow	$\langle 1 \rangle$
$\text{\ltx@firstoftwo} \{\langle 1 \rangle\} \{\langle 2 \rangle\}$	\rightarrow	$\langle 1 \rangle$
$\text{\ltx@secondoftwo} \{\langle 1 \rangle\} \{\langle 2 \rangle\}$	\rightarrow	$\langle 2 \rangle$

1.4 List helpers

$\text{\ltx@car} \{\langle 1 \rangle\} \dots \text{\@nil}$	\rightarrow	$\langle 1 \rangle$
$\text{\ltx@cdr} \{\langle 1 \rangle\} \dots \text{\@nil}$	\rightarrow	\dots

1.5 Tail recursion

$\text{\ltx@ReturnAfterFi} \{\langle 1 \rangle\} \text{\fi}$	\rightarrow	$\text{\fi} \langle 1 \rangle$
$\text{\ltx@ReturnAfterElseFi} \{\langle 1 \rangle\} \text{\else} \{\langle 2 \rangle\} \text{\fi}$	\rightarrow	$\text{\fi} \langle 1 \rangle$

1.6 Empty macro

\ltx@empty	\rightarrow
---------------------	---------------

1.7 Characters

\ltx@space
\ltx@percentchar
$\text{\ltx@backslashchar}$

1.8 Command definitions

`\ltx@ifundefined {<cmd>} {<yes>} {<no>}`

If ε -TeX is available, `\ifcsname` is used that does not have the side effect of defining undefined commands with meaning of `\relax`. This command is always expandable. Change in version 1.1: Also the meaning `\relax` is always considered “undefined”.

`\ltx@ifundefined {<cmd>} {<yes>} {<no>}`

If ε -TeX is available, `\ifcsname` is used that does not have the side effect of defining undefined commands with meaning of `\relax`. Also it always checks for the meaning of `\relax` and considers this as undefined. This macro is not expandable without ε -TeX.

`\ltx@LocalExpandAfter`

It expands the token after the next token but in a local context. That is the difference to `\expandafter`. The local context discards the side effect of `\csname` and let the command undefined after the expansion step.

2 Implementation

2.1 Identification

```
1 <*package>
```

Reload check, especially if the package is not used with L^AT_EX.

4 Installation

4.1 Download

Package. This package is available on CTAN¹:

[CTAN:macros/latex/contrib/oberdiek/ltxcmds.dtx](#) The source file.

[CTAN:macros/latex/contrib/oberdiek/ltxcmds.pdf](#) Documentation.

Bundle. All the packages of the bundle ‘oberdiek’ are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

[CTAN:install/macros/latex/contrib/oberdiek.tds.zip](#)

TDS refers to the standard “A Directory Structure for T_EX Files” ([CTAN:tds/tds.pdf](#)). Directories with `texmf` in their name are usually organized this way.

4.2 Bundle installation

Unpacking. Unpack the `oberdiek.tds.zip` in the TDS tree (also known as `texmf` tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

Script installation. Check the directory `TDS:scripts/oberdiek/` for scripts that need further installation steps. Package `attachfile2` comes with the Perl script `pdfatfi.pl` that should be installed in such a way that it can be called as `pdfatfi`. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

4.3 Package installation

Unpacking. The `.dtx` file is a self-extracting docstrip archive. The files are extracted by running the `.dtx` through plain-T_EX:

```
tex ltxcmds.dtx
```

¹[ftp://ftp.ctan.org/tex-archive/](http://ftp.ctan.org/tex-archive/)

TDS. Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

```
ltxcmds.sty      → tex/generic/oberdiek/ltxcmds.sty
ltxcmds.pdf      → doc/latex/oberdiek/ltxcmds.pdf
test/ltxcmds-test1.tex → doc/latex/oberdiek/test/ltxcmds-test1.tex
ltxcmds.dtx      → source/latex/oberdiek/ltxcmds.dtx
```

If you have a `docstrip.cfg` that configures and enables `docstrip`'s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

4.4 Refresh file name databases

If your \TeX distribution (`teTeX`, `mikTeX`, ...) relies on file name databases, you must refresh these. For example, `teTeX` users run `texhash` or `mktextlsr`.

4.5 Some details for the interested

Attached source. The PDF documentation on CTAN also includes the `.dtx` source file. It can be extracted by AcrobatReader 6 or higher. Another option is `pdftk`, e.g. unpack the file into the current directory:

```
pdftk ltxcmds.pdf unpack_files output .
```

Unpacking with \LaTeX . The `.dtx` chooses its action depending on the format:

plain- \TeX : Run `docstrip` and extract the files.

\LaTeX : Generate the documentation.

If you insist on using \LaTeX for `docstrip` (really, `docstrip` does not need \LaTeX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{ltxcmds.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by the configuration file `ltxdoc.cfg`. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with `pdf \LaTeX` :

```
pdflatex ltxcmds.dtx
makeindex -s gind.ist ltxcmds.idx
pdflatex ltxcmds.dtx
makeindex -s gind.ist ltxcmds.idx
pdflatex ltxcmds.dtx
```

5 History

[2009/08/05 v1.0]

- First version.

[2009/12/12 v1.1]

- Short title shortened.
