

The `pdfcrypt` package

Heiko Oberdiek*
<heiko.oberdiek at googlemail.com>

2016/05/16 v1.1

Abstract

This package supports the setting of pdf encryption options for VT\textrm{E}X and some older versions of pdftEX.

1 Documentation

This package allows the setting of pdf encryption options for

- VTEX, since version 7.35, <http://www.micropress-inc.com/>.
- pdfTEX, patched by Ricardo Sanchez Carmenes¹.
Some supported versions are:

pdfTEX-1.00a,
pdfTEX-0.14h-pdfcrypt-20010310,
pdfcrypt-20010331

Note: Since pdfTEX-1.10a (2003-01-16) encryption support was dropped! Thus the package is now obsolete for recent pdfTEX versions.

1.1 Alternatives

There are free alternatives, programs that can be used for postprocessing the pdf file:

- pdftk
<http://www.accesspdf.com/pdftk/>
- Multivalent
<http://multivalent.sourceforge.net/>
- PDFBox
<http://www.pdfbox.org/>
- PDFTTrans
<http://maddingue.free.fr/softwares/pdftrans.html>
- ...

1.2 Usage

The options can be set as package options or with the command \pdfcryptsetup:

```
owner=<owner password>
user=<user password>
print, copy, edit, annotate=true, false
all, none
debug
```

The encryption is set at \begin{document} by default, but this can be forced for an earlier time using the option set. Example:

```
\usepackage[owner=Donald,user=Knuth,print=false]{pdfcrypt}
...
\begin{document}
```

or

```
\usepackage{pdfcrypt}
\pdfcryptsetup{owner=Donald,user=Knut}
\pdfcryptsetup{print=false,set}
...
\begin{document}
```

¹Ricardo Sanchez Carmenes's email address: carmenes@bioquimica.uniovi.es

1.2.1 Special characters

The characters ‘{’, ‘}’, and ‘\’ have to be escaped with ‘\\’. Then the string should not be specified as package option but with the macro `\pdfcryptsetup`, eg:

```
\pdfcryptsetup{user={\{\Hello\}},print=false}
```

The password here is “{\Hello}”. Active characters can be used and are not expanded. Macros except for \{, \}, and \\ should not be used and are not expanded.

1.2.2 \nopdfcrypt

Often the whole process of pdf generation includes several \TeX compilations and perhaps other postprocessing steps. Therefore a feature would be useful to disable the encryption stuff in order to speed up the first compilations. Therefore package `pdfcrypt` will look for the macro `\nopdfcrypt`. If it has the meaning of the letter ‘Y’, the package will be disabled. Example:

```
pdflatex '\let\nopdfcrypt=Y\input myfile'  
thumbpdf myfile  
pdfelatex myfile
```

1.2.3 Configuration file

If the file `pdfcrypt.cfg` exists it is loaded and can be used for common settings.

1.2.4 Support for plain \TeX

The package can also be used with plain \TeX . It defines the missing \LaTeX macros and loads package `keyval`. The configuration file is not supported and automatically loaded.

1.3 Hints for pdf \TeX

This section is out of date, because the encryption support was removed from pdf \TeX . Therefore this hints are of historical interest only.

* There are packages such as `thumbpdf` that ship out some stuff (`\immediate\pdfobj{...}`). In these cases `\pdfcrypt` will be ignored without warning or error message. Therefore the package `pdfcrypt` should be loaded before and option “set” should be used in order to force the call of `\pdfcrypt`, for example:

```
\usepackage{pdfcrypt}  
\pdfcryptsetup{..., set}  
...  
\usepackage{thumbpdf}
```

* Compiling pdf \TeX (eg. version 1.00a-pretest-20010804):

```
pdfTeX versions are available at  
ftp://ftp.cstug.cz/pub/tex/local/cstug/thanh/pdftex/snapshots/  
Unpack the latest .tgz file:  
> tar xzf pdftex-20010804.tgz  
Enable encryption support:  
src> cd src/texk/web2c/pdftexdir  
src/texk/web2c/pdftexdir> ln -fs pdfcrypt-full.c pdfcrypt.c  
Compile:  
src/texk/web2c/pdftexdir> cd ../../..  
src> ./configure  
src> cd texk/web2c  
src/texk/web2c> make pdftexbin  
At last install the binary and pool files.
```

2 Implementation

1 `(*package)`

2.1 Help macros for plain T_EX

3 Installation

3.1 Download

Package. This package is available on CTAN²:

`CTAN:macros/latex/contrib/oberdiek/pdfcrypt.dtx` The source file.

`CTAN:macros/latex/contrib/oberdiek/pdfcrypt.pdf` Documentation.

Bundle. All the packages of the bundle ‘oberdiek’ are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

`CTAN:install/macros/latex/contrib/oberdiek.tds.zip`

TDS refers to the standard “A Directory Structure for TeX Files” (`CTAN:tds/tds.pdf`). Directories with `texmf` in their name are usually organized this way.

3.2 Bundle installation

Unpacking. Unpack the `oberdiek.tds.zip` in the TDS tree (also known as `texmf` tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

Script installation. Check the directory `TDs:scripts/oberdiek/` for scripts that need further installation steps. Package `attachfile2` comes with the Perl script `pdflatfi.pl` that should be installed in such a way that it can be called as `pdflatfi`. Example (linux):

```
chmod +x scripts/oberdiek/pdflatfi.pl
cp scripts/oberdiek/pdflatfi.pl /usr/local/bin/
```

3.3 Package installation

Unpacking. The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain TeX:

```
tex pdfcrypt.dtx
```

TDS. Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

```
pdfcrypt.sty → tex/generic/oberdiek/pdfcrypt.sty
pdfcrypt.pdf → doc/latex/oberdiek/pdfcrypt.pdf
pdfcrypt.dtx → source/latex/oberdiek/pdfcrypt.dtx
```

If you have a `docstrip.cfg` that configures and enables `docstrip`’s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

3.4 Refresh file name databases

If your TeX distribution (teTeX, mikTeX, ...) relies on file name databases, you must refresh these. For example, teTeX users run `texhash` or `mktexlsr`.

²<http://ctan.org/pkg/pdfcrypt>

3.5 Some details for the interested

Unpacking with L^AT_EX. The .dtx chooses its action depending on the format:

plain T_EX: Run docstrip and extract the files.

L^AT_EX: Generate the documentation.

If you insist on using L^AT_EX for docstrip (really, docstrip does not need L^AT_EX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{pdfcrypt.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the .dtx or the .drv to generate the documentation. The process can be configured by the configuration file ltxdoc.cfg. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfL^AT_EX:

```
pdflatex pdfcrypt.dtx
makeindex -s gind.ist pdfcrypt.idx
pdflatex pdfcrypt.dtx
makeindex -s gind.ist pdfcrypt.idx
pdflatex pdfcrypt.dtx
```

4 Catalogue

The following XML file can be used as source for the T_EX Catalogue. The elements **caption** and **description** are imported from the original XML file from the Catalogue. The name of the XML file in the Catalogue is pdfcrypt.xml.

```
469 <catalogue>
470 <?xml version='1.0' encoding='us-ascii'?>
471 <!DOCTYPE entry SYSTEM 'catalogue.dtd'>
472 <entry timestamp='$Date$' modifier='$Author$' id='pdfcrypt'>
473   <name>pdfcrypt</name>
474   <caption>Allows the setting of pdf encryption.</caption>
475   <authorref id='auth:oberdiek' />
476   <copyright owner='Heiko Oberdiek' year='2001,2006,2007' />
477   <license type='lppl1.3' />
478   <version number='1.1' />
479   <description>
480     Allows the setting of pdf encryption options for VTeX and some
481     older versions of pdfTeX. The options can be set as package
482     options or in the command <tt>\pdfcryptsetup</tt>. Options
483     include <tt>owner=OwnerPassword</tt>, <tt>user=UserPassword,
484     print</tt>, <tt>copy</tt>, <tt>edit</tt>, <tt>annotate=true,
485     false all, none</tt>. The encryption is set at
486     <tt>\begin{document}</tt> by default, but this can be forced for
487     an earlier time by option &#x2018;set&z#x2019;;
488   <p/>
489   Example:
490   <tt>\usepackage[owner=Donald,user=Knuth,print=false]{pdfcrypt}</tt>
491   <p/>
492   The package is part of the <xref refid='oberdiek'>oberdiek</xref> bundle.
493 </description>
494 <documentation details='Package documentation'
495   href='ctan:/macros/latex/contrib/oberdiek/pdfcrypt.pdf' />
496 <ctan file='true' path='/macros/latex/contrib/oberdiek/pdfcrypt.dtx' />
```

```
497 <miktex location='oberdiek' />
498 <texlive location='oberdiek' />
499 <install path='/macros/latex/contrib/oberdiek/oberdiek.tds.zip' />
500 </entry>
501 </catalogue>
```

5 History

[2001/04/02 v0.1]

- First public version, published in the pdftex mailing list for testing with pdfcrypt-20010331

[2001/07/19 v0.2]

- Default: all allowed.
- Support for VTEX added.

[2001/07/19 v0.3]

- Bug fix: VTEX letter for edit is M (modify).

[2001/07/19 v0.4]

- Bug fix: `\VTeXversion` is correct after regenerating the format file.

[2001/08/05 v0.5]

- Syntax change in pdfTEX 1.00a.

[2001/08/09 v0.6]

- Support of special characters:
input: `\{`, `\}`, `\\"` for `{`, `}`, `\`
output: " in VTEX
- Option debug added.

[2001/10/28 v0.7]

- Plain compatibility.
- `\nopdfcrypt` added.
- Typos corrected.

[2006/02/20 v0.8]

- Obsolete remarks for pdfTEX.
- DTX framework.
- LPPL 1.3

[2007/04/11 v0.9]

- Line ends sanitized.

[2007/04/26 v1.0]

- Use of package `infwarerr`.

[2016/05/16 v1.1]

- Documentation updates.

6 Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; plain numbers refer to the code lines where the entry is used.
