

The `pdfescape` package

Heiko Oberdiek
<heiko.oberdiek at googlemail.com>

2011/04/04 v1.12

Abstract

This package implements pdfTEX's escape features (`\pdfescapehex`, `\pdfunescapehex`, `\pdfescapename`, `\pdfescapestring`) using T_EX or ε-T_EX.

Contents

1 Documentation	2
1.1 Additional unescape macros	2
1.2 Sanitizing macro	3
2 Implementation	3
2.1 Reload check and package identification	3
2.2 Catcodes	4

1 Documentation

```
\EdefEscapeHex {\langle cmd \rangle} {\langle string \rangle}
\EdefUnescapeHex {\langle cmd \rangle} {\langle string \rangle}
\EdefEscapeName {\langle cmd \rangle} {\langle string \rangle}
\EdefEscapeString {\langle cmd \rangle} {\langle string \rangle}
```

These commands converts *⟨string⟩* and stores the result in macro *⟨cmd⟩*. The conversion result is the same as the conversion of the corresponding pdfTeX’s primitives. Note that the argument *⟨string⟩* is expanded before the conversion.

For example, if pdfTeX ≥ 1.30 is present, then `\EdefEscapeHex` becomes to:

```
\def\EdefEscapeHex#1#2{%
  \edef#1{\pdfescapehex{#2}}%
}
```

The package provides implementations for the case that pdfTeX is not present (or too old). Even ε-TeX can be missing, however it is used if it is detected.

Babel. The input strings may contain shorthand characters of package `babel`.

1.1 Additional unescape macros

```
\EdefUnescapeName {\langle cmd \rangle} {\langle string \rangle}
```

Sequences of a hash sign with two hexadecimal digits are converted to the corresponding character (PDF-1.2). A hash sign that is not followed by two hexadecimal digits is left unchanged. The catcodes in the result string follow TeX’s conventions. The space has catcode 10 (space) and the other characters have catcode 12 (other).

```
\EdefUnescapeString {\⟨cmd⟩} {⟨string⟩}
```

Macro ⟨cmd⟩ stores the unescaped string in ⟨string⟩. All the rules for literal strings are implemented, see PDF specification. The catcodes in the result string follow TeX's conventions.

1.2 Sanitizing macro

```
\EdefSanitize {\⟨cmd⟩} {⟨string⟩}
```

Argument ⟨string⟩ is expanded, converted to a string of tokens with catcode 12 (other) and space tokens, and stored in macro ⟨cmd⟩.

2 Implementation

1 ⟨*package⟩

2.1 Reload check and package identification

Reload check, especially if the package is not used with L^AT_EX.

```

823 \ProvidesFile{pdfescape-test4.tex}%
824   [2011/04/04 v1.12 Test without \string\pdfescape... and e-TeX]%
825 
```

3.6 Test with LuaTeX

```

826 {*test5}
827 \ProvidesFile{pdfescape-test5.tex}%
828   [2011/04/04 v1.12 Test with LuaTeX]%
829 
```

3.7 Check/ensure test preconditions

3.7.1 Check \pdfescape...

```

830 {*test2}
831 @ifundefined{pdfescapehex}{%
832   \PackageError{pdfescape-test2}{%
833     Missing \string\pdfescape... commands}%
834 }{Test aborted.}%
835 \stop
836 }{%
837 
```

```

838 {*test3 | test4}
839 \let\pdfescapehex\@undefined
840 \let\pdfunescapehex\@undefined
841 \let\pdfescapename\@undefined
842 \let\pdfescapestring\@undefined
843 
```

3.7.2 Check ε -TeX

```

844 {*test3}
845 @ifundefined{numexpr}{%
846   \PackageError{pdfescape-test3}{%
847     Missing \eTeX}%
848 }{Test aborted.}%
849 \stop
850 }{%
851 
```

Package `qstest` uses ε -TeX, thus ε -TeX's features can only be disabled later during loading of package `pdfescape`.

3.7.3 Check LuaTeX

```

852 {*test5}
853 @ifundefined{directlua}{%
854   \PackageError{pdfescape-test5}{%
855     Missing LuaTeX}%
856 }{Test aborted.}%
857 \stop
858 }{%
859 
```

3.8 Common part

The files for testing uses the framework, provided by the new package `qstest` of David Kastrup.

```

860 \RequirePackage{qstest}
```

```

4 Installation

4.1 Download

Package. This package is available on CTAN¹:

<CTAN:macros/latex/contrib/oberdiek/pdfescape.dtx> The source file.

<CTAN:macros/latex/contrib/oberdiek/pdfescape.pdf> Documentation.

Bundle. All the packages of the bundle ‘oberdiek’ are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

<CTAN:install/macros/latex/contrib/oberdiek.tds.zip>

TDS refers to the standard “A Directory Structure for TeX Files” (<CTAN:tds/tds.pdf>). Directories with `texmf` in their name are usually organized this way.

4.2 Bundle installation

Unpacking. Unpack the `oberdiek.tds.zip` in the TDS tree (also known as `texmf` tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

Script installation. Check the directory `TDSScripts/oberdiek/` for scripts that need further installation steps. Package `attachfile2` comes with the Perl script `pdfatfi.pl` that should be installed in such a way that it can be called as `pdfatfi`. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

4.3 Package installation

Unpacking. The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain TeX:

```
tex pdfescape.dtx
```

TDS. Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

<code>pdfescape.sty</code>	→ <code>tex/generic/oberdiek/pdfescape.sty</code>
<code>pdfescape.pdf</code>	→ <code>doc/latex/oberdiek/pdfescape.pdf</code>
<code>test/pdfescape-test1.tex</code>	→ <code>doc/latex/oberdiek/test/pdfescape-test1.tex</code>
<code>test/pdfescape-test2.tex</code>	→ <code>doc/latex/oberdiek/test/pdfescape-test2.tex</code>
<code>test/pdfescape-test3.tex</code>	→ <code>doc/latex/oberdiek/test/pdfescape-test3.tex</code>
<code>test/pdfescape-test4.tex</code>	→ <code>doc/latex/oberdiek/test/pdfescape-test4.tex</code>
<code>test/pdfescape-test5.tex</code>	→ <code>doc/latex/oberdiek/test/pdfescape-test5.tex</code>
<code>test/pdfescape-test6.tex</code>	→ <code>doc/latex/oberdiek/test/pdfescape-test6.tex</code>
<code>pdfescape.dtx</code>	→ <code>source/latex/oberdiek/pdfescape.dtx</code>

If you have a `docstrip.cfg` that configures and enables `docstrip`’s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

4.4 Refresh file name databases

If your TeX distribution (teTeX, mikTeX, ...) relies on file name databases, you must refresh these. For example, teTeX users run `texhash` or `mktexlsr`.

¹<ftp://ftp.ctan.org/tex-archive/>

4.5 Some details for the interested

Attached source. The PDF documentation on CTAN also includes the `.dtx` source file. It can be extracted by AcrobatReader 6 or higher. Another option is `pdftk`, e.g. unpack the file into the current directory:

```
pdftk pdfescape.pdf unpack_files output .
```

Unpacking with L^AT_EX. The `.dtx` chooses its action depending on the format:

plain T_EX: Run `docstrip` and extract the files.

L^AT_EX: Generate the documentation.

If you insist on using L^AT_EX for `docstrip` (really, `docstrip` does not need L^AT_EX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{pdfescape.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by the configuration file `ltxdoc.cfg`. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdflat^AT_EX:

```
pdflatex pdfescape.dtx
makeindex -s gind.ist pdfescape.idx
pdflatex pdfescape.dtx
makeindex -s gind.ist pdfescape.idx
pdflatex pdfescape.dtx
```

5 History

[2007/02/21 v1.0]

- First version.

[2007/02/25 v1.1]

- Test files added.
- `\EdefUnescapeHex` supports lowercase letters.
- Fix: `\EdefEscapeName{^^@}`
- Fix: `\EdefEscapeName{\string#}`
- Fix for `\EdefUnescapeHex` in case of incomplete hex string.
- Fix: `\EdefUnescapeHex` generates space tokens with catcode 10 (space) in all cases.
- Fix: `\EdefEscapeHex` and `\EdefEscapeName` now generate tokens with catcode 12 (other) only.

[2007/03/20 v1.2]

- Fix: Wrong year in `\ProvidesPackage`.

[2007/04/11 v1.3]

- Line ends sanitized.

[2007/04/21 v1.4]

- \EdefUnescapeName and \EdefUnescapeString added.

[2007/08/27 v1.5]

- \EdefSanitize added (replaces \PE@sanitize).

[2007/09/09 v1.6]

- Fix in catcode setup.

[2007/10/27 v1.7]

- More efficient \EdefSanitize.

[2007/11/11 v1.8]

- Use of package pdfTEXcmds for LuaTeX support.

[2010/03/01 v1.9]

- Compatibility with iniTeX.

[2010/11/12 v1.10]

- Use of package ltxcmds.
- Fix for compatibility with iniTeX.

[2011/01/30 v1.11]

- Already loaded package files are not input in plain TeX.

[2011/04/04 v1.12]

- Further fixes for compatibility for iniTeX.
- Test file for iniTeX added.

6 Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; plain numbers refer to the code lines where the entry is used.
