# 1 Introduction and features

This Latex library provides a standard set of environments for writing optimization problems. The most important features are:

1. It references optimization problem using three different policies: no equation is referenced, the problem is referenced with a single label, each equation has an individual reference.
2. It defines two problem size formats: a long format and a short format.
3. It allows four different outputs for the location of the constraints.
4. It allows the definition of a limitless number of constraints.
5. Four different type of problems: *minimize*, *maximize*, *arg min* and *arg max*.

## 2 Environment Syntax Definition

Considering that `Const.i` stands for constraint  $i$ , `LHS.i` stands for the left-hand-side of constraint  $i$ , and `RHS.i` for the right-hand-side counterpart, the basic structure to define a general optimization problem with  $N$  constraints is:

```
\begin{mini#}{sizeFormat}[constraintFormat]
{optimizationVariable}
{objectiveFunction\label{objective}}
{\label{optimizationProblem}}
{optimizationResult}

\addConstraint{LHS.1}{RHS.1\label{Const1}}{extraConst1}
\addConstraint{LHS.2}{RHS.2\label{Const2}}{extraConst2}
.
.
\addConstraint{LHS.N}{RHS.N\label{ConstN}}{extraConstN}
\end{mini#}
```

### 2.1 Definition of Problem parameters

- (i) `mini#`: defines the type of environment and reference used. There are four environments: `mini`, `maxi`, `argmini`, and `argmaxi`. There are three types of referencing: `mini`, `mini*` and `mini!`. Consult Section 3 for more details.
- (ii) (Optional) `sizeFormat`: optional parameter to define the size format of the problem. The possible values are:
  - l: for the long format as defined in Section 4.
  - s: for the short format as defined in Section 4.

- (iii) (Optional) **constraintFormat**: optional parameter to change the format of the constraints. The parameter **constraintFormat** can take the following values:
  - 0: for the Standard definition in Section 6.
  - 1: for Alternative 1 in Section 6.
  - 2: for Alternative 2 in Section 6
  - 3: for Alternative 3 in Section 6
- (iv) **optimizationVariable**: variable to be optimized in the problem, e.g.  $w \in \mathbb{R}^N$ .
- (v) **objectiveFunction\label{objective}**: function to be minimized/maximized as a function of the optimization variable, e.g.  $\|w\|_2$ . If required, the objective function label should also be included withing this term
- (vi) **\label{optimizationProblem}**: it defines the main and general reference for the optimization problem. It is used for the **mini** and **mini!** environments. In the **mini\*** environment should be left blank, i.e. {}, **not to be ommited**.
- (vii) **optimizationResult**: a term expressing the result of the optimization problem, e.g.  $J(w^*) =$ . If not needed leave it blank, **not to be ommited**.

The last two defined problem parameters, **\label{optimizationProblem}** and **optimizationResult**, could be made optional. However, in order to improve the problem readability, line breaking between the 7 parameters was implemented; unfortunately, line breaking and optional parameters are not compatible and these two parameters had to be made mandatory.

## 2.2 Adding Constraints

After the definition of the problem parameters, the environment accepts the definition of an infinite number of constraints. For this definitions the following command is used:

```
\addConstraint{LHS.k}{RHS.k\label{Const.k}}{extraConst.k}
```

The command accepts three different parameters

1. **LHS.k**: the left-hand side of the constraint  $k$ , e.g.  $3w^\top w$ .
2. (Optional) **RHS.k\label{Const.k}**: the right-hand side of the constraint  $k$  if the equations should be aligned in the equality or inequality signs, e.g.  $\leq \|w\|_\infty$ . If required, the constraint label should also be included in this term.
3. (Optional) **extraConst.k**: optional parameter to add extra alignment point for additional constraint information. An example would be the constraint names. Look Example 7.9 or the fourth described feature in Section 5.

### 2.2.1 Constraints referencing

Notice that the label for the constraints is always included in the right hand side expression and it only makes sense for the case of using the **mini!** environment. The label of the objective function can also be included in a similar way.

## 3 Environment Types

There are three basic environments depending on the type of referencing that should be used.

1. The **mini** environment for defining problems with a single reference label:

$$\begin{aligned} & \underset{w}{\text{minimize}} \quad f(w) + R(w + 6x) \\ & \text{subject to} \quad g(w) = 0 \end{aligned} \tag{1}$$

2. The **mini\*** environment if the problem does not have to be referenced:

$$\begin{aligned} & \underset{w}{\text{minimize}} \quad f(w) + R(w + 6x) \\ & \text{subject to} \quad g(w) = 0 \end{aligned}$$

3. The **mini!** environment if each equation should be referenced:

$$\underset{w}{\text{minimize}} \quad f(w) + R(w + 6x) \tag{2a}$$

$$\text{subject to} \quad g(w) = 0 \tag{2b}$$

Additionally, there are four basic definitions of optimization problems:

1. The **mini** environment:

$$\begin{aligned} & \underset{w}{\text{minimize}} \quad f(w) + R(w + 6x) \\ & \text{subject to} \quad g(w) = 0 \end{aligned} \tag{3}$$

2. The **maxi** environment:

$$\begin{aligned} & \underset{w}{\text{maximize}} \quad f(w) + R(w + 6x) \\ & \text{subject to} \quad g(w) = 0 \end{aligned} \tag{4}$$

3. The **argmini** environment:

$$\begin{aligned} & \underset{w}{\arg \min} \quad f(w) + R(w + 6x) \\ & \text{subject to} \quad g(w) = 0 \end{aligned} \tag{5}$$

4. The **argmaxi** environment:

$$\begin{aligned} & \underset{w}{\arg \max} \quad f(w) + R(w + 6x) \\ & \text{subject to} \quad g(w) = 0 \end{aligned} \tag{6}$$

## 4 Long and Short Output Formats

The library permits the definition of two different problem size: a long format and a short format.

### 4.1 Long Format

Selected by `sizeFormat=l`. It makes use of *subject to* and *minimize/maximize*

$$\begin{aligned} & \underset{w}{\text{minimize}} \quad f(w) + R(w + 6x) \\ & \text{subject to} \quad g(w) = 0 \end{aligned}$$

### 4.2 Short Format

Selected by `sizeFormat=s`. It uses instead the shorter *s.t.* and *min/max*

$$\begin{aligned} & \underset{w}{\text{min}} \quad f(w) + R(w + 6x) \\ & \text{s.t.} \quad g(w) = 0 \end{aligned}$$

## 5 Alignment of Equations

1. Alignment at the beginning of the words *minimize* and *subject to*:

$$\begin{aligned} & \underset{w}{\text{minimize}} \quad f(w) + R(w + 6x) \\ & \text{subject to} \quad g(w) = 0 \end{aligned} \tag{7}$$

2. (Optional) Alignment at the `=`, `>`, `<` signs of the constraints.

$$\begin{aligned} & \underset{w}{\text{minimize}} \quad f(w) + R(w + 6x) \\ & \text{subject to} \\ & \quad g(w) + h(w) = 0, \\ & \quad l(w) = 5w. \end{aligned}$$

3. (Optional) Alignment of the longest constraint and the objective function:

$$\begin{aligned} & \underset{w}{\text{minimize}} \quad f(w) + R(w + 6x) \\ & \text{subject to} \quad g(w) + h(w) = 0, \\ & \quad l(w) = 5w. \end{aligned}$$

4. (Optional) Third alignment point on the constraints to set some constraint features. A clear example could be the constraints names:

$$\begin{aligned} & \underset{w}{\text{minimize}} \quad f(w) + R(w + 6x) \\ & \text{subject to} \quad g(w) + h(w) = 0, \quad (\text{Topological Constraint}), \\ & \quad l(w) = 5w, \quad (\text{Boundary Constraint}) \end{aligned}$$

or the index of the constraints:

$$\begin{aligned} & \underset{w, u}{\text{minimize}} \quad f(w) + R(w + 6x) \\ & \text{subject to} \quad g(w_k) + h(w_k) = 0, \quad k = 0, \dots, N - 1, \\ & \quad l(w_k) = 5u, \quad k = 0, \dots, N - 1 \end{aligned}$$

## 6 Output Formats for the Constraints

There are four basic output formats for the location of the constraints. They are controlled by the environment parameter `constraintFormat`.

### 6.1 Standard Format

It is the default format and if `constraintFormat` left blank it is used. Alternatively can be also set by selecting `constraintFormat=0`.

By default the constraints are aligned with the objective function, to the right of *subject to* and with a second alignment point at the  $=$ ,  $\leq$ ,  $\geq$ :

$$\begin{aligned} & \underset{w}{\text{minimize}} \quad f(w) + R(w + 6x) \\ & \text{subject to} \quad g(w) + h(w) = 0, \\ & \quad t(w) = 0. \end{aligned} \tag{8}$$

### 6.2 Alternative 1

Selected by `constraintFormat=1`. It locates the constraints below *subject to* and keeps them aligned at the inequality/equality signs:

$$\begin{aligned} & \underset{w}{\text{minimize}} \quad f(w) + R(w + 6x) \\ & \text{subject to} \\ & \quad g(w) + h(w) = 0, \\ & \quad t(w) = 0. \end{aligned} \tag{9}$$

### 6.3 Alternative 2

Selected by `constraintFormat=2`. It aligns all the constraints with the objective function.

$$\begin{aligned} & \underset{w}{\text{minimize}} \quad f(w) + R(w + 6x) \\ & \text{subject to} \quad g(w) + h(w) = 0, \\ & \quad t(w) = 0. \end{aligned} \tag{10}$$

## 6.4 Alternative 3

Selected by `constraintFormat=3`. It aligns all the constraints below *subject to*:

$$\begin{aligned}
 & \underset{w}{\text{minimize}} \quad f(w) + R(w + 6x) \\
 & \text{subject to} \\
 & g(w) + h(w) = 0, \\
 & t(w) = 0.
 \end{aligned} \tag{11}$$

## 7 Examples

### 7.1 Example 1 - mini environment

The code:

```
\begin{mini}
{w}{f(w)+ R(w+6x)}
{\label{eq:Example1}{}}

\addConstraint{g(w)}{=0}
\addConstraint{n(w)}{= 6}
\addConstraint{L(w)+r(x)}{=Kw+p}
\addConstraint{h(x)}{=0.}
\end{mini}
```

outputs:

$$\begin{aligned}
 & \underset{w}{\text{minimize}} \quad f(w) + R(w + 6x) \\
 & \text{subject to} \quad g(w) = 0, \\
 & \quad n(w) = 6, \\
 & \quad L(w) + r(x) = Kw + p, \\
 & \quad h(x) = 0.
 \end{aligned} \tag{12}$$

### 7.2 Example 2 - mini\* environment

On the other hand:

```
\begin{mini*}
{w}{f(w)+ R(w+6x)}
{\label{eq:Example1}{}}

\addConstraint{g(w)}{=0}
\addConstraint{n(w)}{= 6,}
\addConstraint{L(w)+r(x)}{=Kw+p}
\addConstraint{h(x)}{=0.}
\end{mini*}
```

it is almost the same but removing the reference:

$$\begin{aligned} & \underset{w}{\text{minimize}} \quad f(w) + R(w + 6x) \\ & \text{subject to} \quad g(w) = 0, \\ & \qquad \qquad n(w) = 6, \\ & \qquad L(w) + r(x) = Kw + p, \\ & \qquad h(x) = 0. \end{aligned}$$

### 7.3 Example 3 - mini! environment

Finally, the multireferencing environment outputs:

```

\begin{mini!}
    \{w\}\{f(w) + R(w+6x) \label{eq:ObjectiveExample1}\}
    \{\label{eq:Example1}\}\{}

    \addConstraint{g(w)}{=0} \label{eq:C1Example3}\}
    \addConstraint{n(w)}{= 6 \label{eq:C2Example1}\}}
    \addConstraint{L(w)+r(x)}{=Kw+p \label{eq:C3Example1}\}}
    \addConstraint{h(x)}{=0. \label{eq:C4Example1}\}

\end{mini!}

```

$$\underset{w}{\text{minimize}} \quad f(w) + R(w + 6x) \quad (13a)$$

$$\text{subject to} \quad g(w) = 0, \quad (13b)$$

$$n(w) = 6, \quad (13c)$$

$$L(w) + r(x) = Kw + p, \quad (13d)$$

$$h(x) = 0. \quad (13e)$$

#### 7.4 Example 4 - Problem Result

Adding the problem result:

```

\begin{mini}
{w}{f(w)+ R(w+6x)}
{\label{eq:Example1}}
{J(w^*)=}

\addConstraint{g(w)}{=0}
\addConstraint{n(w)}{= 6}
\addConstraint{L(w)+r(x)}{=Kw+p}
\addConstraint{h(x)}{=.}
\end{mini}

```

outputs:

$$\begin{aligned}
 J(w^*) = & \underset{w}{\text{minimize}} \quad f(w) + R(w + 6x) \\
 \text{subject to} \quad & g(w) = 0, \\
 & n(w) = 6, \\
 & L(w) + r(x) = Kw + p, \\
 & h(x) = 0.
 \end{aligned} \tag{14}$$

## 7.5 Example 5 - Short Format

Adding the short format parameter:

```
\begin{mini}|s|
{w}{f(w)+ R(w+6x)}
{\label{eq:Example1}}
{}

\addConstraint{g(w)}{=0}
\addConstraint{n(w)}{= 6}
\addConstraint{L(w)+r(x)}{=Kw+p}
\addConstraint{h(x)}{=0.}
\end{mini}
```

outputs:

$$\begin{aligned}
 \min_w \quad & f(w) + R(w + 6x) \\
 \text{s.t.} \quad & g(w) = 0, \\
 & n(w) = 6, \\
 & L(w) + r(x) = Kw + p, \\
 & h(x) = 0.
 \end{aligned} \tag{15}$$

## 7.6 Example 6 - Alternative 1 for Constraints

If including a 1 as optional parameter, the first constraint will appear aligned to the left right below *subject to*.

```
\begin{mini}[1]
{w}{f(w)+ R(w+6x)}
{\label{eq:Example1}}
{}

\addConstraint{g(w)}{=0}
\addConstraint{n(w)}{= 6}
\addConstraint{L(w)+r(x)}{=Kw+p}
\addConstraint{h(x)}{=0.}
\end{mini}
```

outputs:

$$\begin{aligned}
 & \underset{w}{\text{minimize}} \quad f(w) + R(w + 6x) \\
 & \text{subject to} \\
 & \quad g(w) = 0, \\
 & \quad n(w) = 6, \\
 & \quad L(w) + r(x) = Kw + p, \\
 & \quad h(x) = 0.
 \end{aligned} \tag{16}$$

## 7.7 Example 7 - Alternative 2 for Constraints

If including a 2 as optional parameter, the constraint will appear to the right of *subject to* but a single alignment point.

```
\begin{minipage}[2]
{w}{f(w)+ R(w+6x)}
{\label{eq:Example1}}
{}

\addConstraint{g(w)}{=0}
\addConstraint{n(w)}{= 6}
\addConstraint{L(w)+r(x)}{=Kw+p}
\addConstraint{h(x)}{=0.}
\end{minipage}
```

outputs:

$$\begin{aligned}
 & \underset{w}{\text{minimize}} \quad f(w) + R(w + 6x) \\
 & \text{subject to} \quad g(w) = 0, \\
 & \quad n(w) = 6, \\
 & \quad L(w) + r(x) = Kw + p, \\
 & \quad h(x) = 0.
 \end{aligned} \tag{17}$$

## 7.8 Example 8 - Alternative 3 for Constraints

If including a 3 as optional parameter, the first constraint will appear aligned to the left right below *subject to* and with a single alignment point.

```
\begin{minipage}[3]
{w}{f(w)+ R(w+6x)}
{\label{eq:Example1}}
{}

\addConstraint{g(w)}{=0}
\addConstraint{n(w)}{= 6}
\addConstraint{L(w)+r(x)}{=Kw+p}
```

```
\addConstraint{h(x)}{=0.}
\end{mini}
```

outputs:

$$\begin{aligned}
 & \underset{w}{\text{minimize}} \quad f(w) + R(w + 6x) \\
 & \text{subject to} \\
 & g(w) = 0, \\
 & n(w) = 6, \\
 & L(w) + r(x) = Kw + p, \\
 & h(x) = 0.
 \end{aligned} \tag{18}$$

## 7.9 Example 9 - Extra Alignment in the Constraints

Adding optional alignment to add constraint names:

```
\begin{mini*}
{w}{f(w)+ R(w+6x)}
{}{}
\addConstraint{g(w)}{=0,}{\quad \text{(Dynamic constraint)}}
\addConstraint{n(w)}{= 6,}{\quad \text{(Boundary constraint)}}
\addConstraint{L(w)+r(x)}{=Kw+p,}{\quad \text{(Random constraint)}}
\addConstraint{h(x)}{=0.}{\quad \text{(Path constraint).}}
\end{mini*}
```

## 7.10 Example 10 - The *argmini* Environment

Similar to the `mini`, `mini*` and `mini!` environments, the environments `argmini`, `argmini*` and `argmini!` are very similar environments that use the same syntax but the output is slightly different:

```
\begin{argmini}
{w}{f(w)+ R(w+6x)}

{\label{eq:Example1}}{w^*=}

\addConstraint{g(w)}{=0}
\addConstraint{n(w)}{= 6}
\addConstraint{L(w)+r(x)}{=Kw+p}
\addConstraint{h(x)}{=0.}
\end{argmini}
```

outputs:

$$\begin{aligned}
 w^* = & \underset{w}{\arg \min} \quad f(w) + R(w + 6x) \\
 & \text{subject to} \quad g(w) = 0, \\
 & \quad n(w) = 6, \\
 & \quad L(w) + r(x) = Kw + p, \\
 & \quad h(x) = 0.
 \end{aligned} \tag{19}$$

## 7.11 Example 11 - The *maxi* and *argmaxi* Environments

Exactly the same syntax and definition as the previous environments, but now for defining maximization environments. The following code serves for illustration:

```
\begin{maxi}
{w}{f(w) + R(w+6x)}
{g(w)}{=0}

{\label{eq:Example1}{}}

\addConstraint{g(w)}{=0}
\addConstraint{n(w)}{= 6}
\addConstraint{L(w)+r(x)}{=Kw+p}
\addConstraint{h(x)}{=0 .}
\end{maxi}
```

outputs:

$$\begin{aligned} & \underset{w}{\text{maximize}} \quad f(w) + R(w + 6x) \\ & \text{subject to} \quad g(w) = 0, \\ & \quad n(w) = 6, \\ & \quad L(w) + r(x) = Kw + p, \\ & \quad h(x) = 0. \end{aligned} \tag{20}$$

## 7.12 Example 12 - All Possible Parameters

```
\begin{mini*}|s|[1]
{w}{f(w) + R(w+6x)}
{}{w^*=}
\addConstraint{g(w)}{=0,}{\quad \text{(Dynamic constraint)}}
\addConstraint{n(w)}{= 6,}{\quad \text{(Boundary constraint)}}
\addConstraint{L(w)+r(x)}{=Kw+p,}{\quad \text{(Random constraint)}}
\addConstraint{h(x)}{=0,}{\quad \text{(Path constraint).}}
\end{mini*}
```

$$w^* = \min_w f(w) + R(w + 6x) \tag{21a}$$

$$\text{s.t. } g(w) = 0, \tag{21b}$$

$$n(w) = 6, \tag{21c}$$

$$L(w) + r(x) = Kw + p, \tag{21d}$$

$$h(x) = 0. \tag{21e}$$

## 8 Long Optimization Variables

The standard appearance for long optimization variables is as follows:

$$\underset{x_0, u_0, x_1, \dots, u_{N-1}, x_N}{\text{minimize}} \quad \sum_{k=0}^{N-1} L(x_k, u_k) + E(x_N) \quad (22a)$$

$$\text{subject to} \quad x_{k+1} - f(x_k, u_k) = 0, \quad k = 0, \dots, N-1, \quad (22b)$$

$$h(x_k, u_k) \leq 0, \quad k = 0, \dots, N-1, \quad (22c)$$

$$r(x_0, x_N) = 0. \quad (22d)$$

A possible way to reduce the large variable spacing is to stack them with the command:

```
\substack{x_0, u_0, x_1, \dots, u_{N-1}, x_N}
```

$$\underset{\substack{x_0, u_0, x_1, \dots, \\ u_{N-1}, x_N}}{\text{minimize}} \quad \sum_{k=0}^{N-1} L(x_k, u_k) + E(x_N) \quad (23a)$$

$$\text{subject to} \quad x_{k+1} - f(x_k, u_k) = 0, \quad k = 0, \dots, N-1, \quad (23b)$$

$$h(x_k, u_k) \leq 0, \quad k = 0, \dots, N-1, \quad (23c)$$

$$r(x_0, x_N) = 0. \quad (23d)$$
