overlays – incremental slides

Andreas Nolda

2016/10/24 (v. 2.4)

The overlay package allows to write presentations with incremental slides. It does not presuppose any specific document class. Rather, it is a lightweight alternative to full-fledged presentation classes like beamer.

In the following, every single state of a incremental slide will be called an *overlay* of that slide.

1 User interface

overlays fragileoverlays

For incremental slides, the following environments are provided:

```
\begin{overlays}{$\langle total\ overlay\ number\rangle$} \\ $\langle slide\ content\rangle$ \\ \\ \begin{fragileoverlays}{$\langle total\ overlay\ number\rangle$}$ \\ $\langle slide\ content\rangle$ \\ \\ \end{fragileoverlays}$}
```

The fragileoverlays environment should be used for incremental slides with verbatim content.

Note that the slide content should fit on a single page.

\alert \visible \only In the slide content, the following commands can be used in order to specify the content of the overlays:

```
\label{eq:content} $$\operatorname{\content}(\operatorname{\content}) = \operatorname{\content}(\operatorname{\content}) = \operatorname{\content}(\operatorname{\content}(\operatorname{\content})) = \operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(\operatorname{\content}(
```

Overlay specifications are either single numbers like 1, sequences of numbers like 1.4, or ranges of numbers like 1-4 or 1-.

The \alert command highlights its content on the specified overlays with the alert color, which may be redefined by means of the \definecolor command.

The \visible command uncovers its content on the overlays which are specified in the overlay specification. On unspecified overlays, the content still takes up space, being rendered in the background color, which, by default, is white.

The content of the **\only** command is also uncovered on the overlays specified in the overlay specification, but is absent from unspecified overlays and does not take up space there.

\savebetweenoverlays

The page and equation counters are not incremented between overlays. Other counters can be saved between overlays, too, by means of the following command:

 $\space{2mm} \space{2mm} \spa$

Typically, this command would be used in the preamble.

2 Known limitations

The \alert, \visible, and \only commands must not contain verbatim commands or environments. They may be used in the content of the alltt environment, though.

3 Dependencies

The overlays package requires the following packages: color, environ, and pgffor (part of pgf).

4 Credits

The code of the overlays package is inspired by Matthias Meister's present package. In addition, it uses an algorithm by Martin Scharrer for testing numbers in numerical ranges (cf. http://tex.stackexchange.com/q/19000).

The code for saving counters between overlays as well as for overlays with verbatim content is taken from the texpower package, which in turn is based on Till Tantau's beamer package.
