

Example for pagecolor

This example demonstrates the use of package `pagecolor`, v1.0b as of 2011/08/06 (HMM).
The used option was `pagecolor={LightGoldenrod1}`.
`pagecolor={none}` would be the default.

For more details please see the documentation!

Save per page about 200 ml water, 2 g CO₂ and 2 g wood:
Therefore please print only if this is really necessary.

The current page (background) colour is
`\thepagecolor = LightGoldenrod1`
(and `\thepagecolornone = LightGoldenrod1`, which would only be different
from `\thepagecolor`, when the page colour would be `none`).

The current page (background) colour is
`\thepagecolor = rgb:-green!40!yellow,3;green!40!yellow,2;red,1.`

Which made the preceding line of text practically invisible.
