

Example for papermas

This example demonstrates the use of package

`papermas`, v1.0d as of 2010/07/29 (HMM).

The used options were `format=4` (ISO A4), `masss=80` (g m^{-2}), and `pagespersheet=2` (pages per sheet of paper, i. e. either duplex printing or printing two pages on one side of a sheet of paper with blank back side). (These are the default options.)

For more details please see the documentation!

This document consists of 53 (53) pages. When printing 2 pages on one sheet of paper, 27 sheets will be needed. For ISO A 4 paper of 80 g m^{-2} specific mass, the printout will have a mass of about 135.0 g.

Save per page about 200 ml water, 2 g CO_2 and 2 g wood:
Therefore please print only if this is really necessary.
I do NOT think, that it is necessary to print THIS file, really
(at least not after this page)!

Last page 53.
