

Drawing Gantt Charts in L^AT_EX with TikZ

The pgfgantt Package

Wolfgang Skala*

v3.0

2012/01/25

The pgfgantt package provides the `ganttchart` environment, which draws a Gantt chart within a TikZ picture. The user may add various elements to the chart, namely titles (`\ganttttitle`, `\ganttttitlelist`), bars (`\ganttbar`), milestones (`\ganttmilestone`), groups (`\ganttgroup`) and different links between these elements (`\ganttlink`). Furthermore, the appearance of the chart elements is highly customizable, owing to a number of keys.

1 Introduction

The `pgfgantt` package allows you to draw Gantt charts in L^AT_EX. Thus, you can describe simple project schedules without having to include images produced by external programs. Similar to Martin Kumm's `gantt` package¹ (which inspired `pgfgantt`'s fundamental aspects), `pgfgantt` bases upon the TikZ frontend of PGF². Besides, it provides a comprehensive (and portable) alternative to `pst-gantt`³.

`pgfgantt` requires a *current* PGF installation. **Note that the version number must at least be 2.10, dated October 25th, 2010.** Furthermore, **pgfgantt 3.0 and above is not fully downwards compatible. In particular, the syntax of \ganttlink has changed.**

Acknowledgements I would like to thank Petr Pošík (Czech Technical University in Prague), Raphaël Clifford (University of Bristol) and Holger Karl (Universität Paderborn) for their ideas concerning new features.

2 User Guide

2.1 Overview

To load the package, simply put

¹http://www.martin-kumm.de/tex_gantt_package.php

²<http://ctan.org/tex-archive/graphics/pgf/>

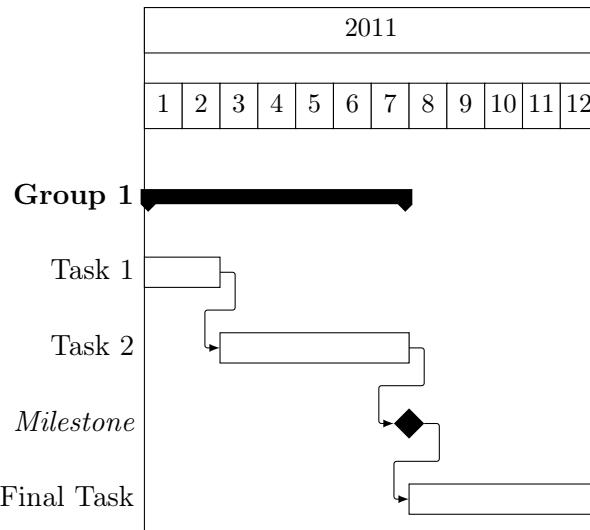

³<http://ctan.org/tex-archive/graphics/pstricks/contrib/pst-gantt/>

```
\usepackage{pgfgantt}
```

into the document preamble.

Compare the following code, which demonstrates some commands provided by `pgfgantt`, to the output it produces:

```
\begin{ganttchart}{12}
\gantttitle{2011}{12} \\
\gantttitelist{1,...,12}{1} \\
\ganttgroup{Group 1}{1}{7} \\
\ganttbar{Task 1}{1}{2} \\
\ganttlinkedbar{Task 2}{3}{7} \ganttnewline
\ganttmilestone{Milestone}{7} \ganttnewline
\ganttbar{Final Task}{8}{12}
\ganttlink{elem2}{elem3}
\ganttlink{elem3}{elem4}
\end{ganttchart}
```

2.2 Specifying Keys

Keys (sometimes called *options*) modify the output from `pgfgantt`'s commands. You may specify a key in two ways: (1) Pass it to the optional argument present in each command, e. g.

```
\ganttbar[bar label font=\bfseries]{Task 1}{1}{2}
```

This locally changes a key for the element(s) drawn by that command. (2) Alternatively, specify a key by the `\ganttset{<key=value list>}` macro, which sets its keys globally (or rather within the current T_EX group):

```
\ganttset
```

```
\ganttset{bar label font=\bfseries}
```

Since `pgfgantt` uses the `pgfkeys` package for key management, all its keys reside in the `/pgfgantt/` path. However, if you set your keys by one of the methods explained above, this path is automatically prepended to each key.

2.3 The Canvas

Let us have a look at the basic anatomy of a Gantt chart and define some common terms. Each *chart* consists of several *elements*, such as titles, bars and connections between bars. Commands that start with `\gantt...` draw these elements. When specifying start and end *coordinates* for these commands, we use the dimensionless *chart coordinate system*, whose origin lies in the top left corner. Along the *x-axis*, one unit corresponds to one *time slot*; along the *y-axis*, one unit equals one *line*.

The `ganttchart` environment groups several of the element-drawing macros into a single chart:

```
\begin{ganttchart}[(options)]{(number of time slots)}
  ...
\end{ganttchart}
```

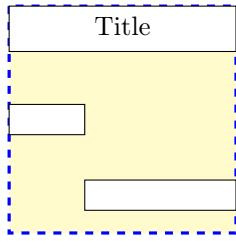

`ganttchart`

The environment has one optional and one mandatory argument. The former specifies the `(options)` for the chart, the latter indicates the `(number of time slots)`.

Although you will often put a `ganttchart` into a `tikzpicture` environment, you may actually use the environment on its own. `pgfgantt` checks whether the chart is surrounded by a `tikzpicture` and adds this environment if necessary.

`/pgfgantt/canvas ./style=<style>` `fill=white`
The `canvas` key changes the appearance of the canvas. `<style>` is a list of TikZ keys such as `fill`, `draw` or `dashed`. By default, the canvas is a white rectangle with a black frame.

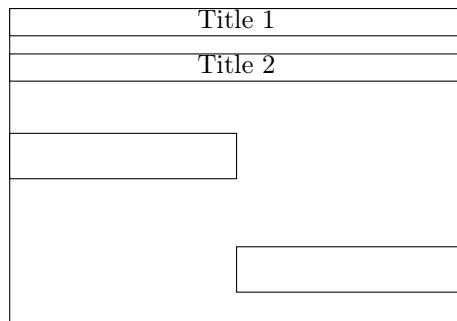

```
\begin{tikzpicture} % optional
\begin{ganttchart}%
  [canvas/.style={fill=yellow!25, draw=blue, dashed, very thick}]{6}
  \ganttttitle{Title}{6} \\
  \ganttbar{}{1}{2} \\
  \ganttbar{}{3}{6}
\end{ganttchart}
\end{tikzpicture} % optional
```

```
/pgfgantt/x unit =⟨dimension⟩ .5cm
/pgfgantt/y unit title =⟨dimension⟩ 1cm
/pgfgantt/y unit chart =⟨dimension⟩ 1cm
```

These keys specify the width of a time slot and the height of title or chart lines, respectively. Typically, the *x/y*-dimension ratio approximates 1 : 2, and the line height is equal over the whole chart. Other dimensions are well possible, but you might have to change several spacing-related keys in order to obtain a pleasing chart.

```
\begin{ganttchart}[x unit=1cm, y unit title=.6cm, y unit chart=1.5cm]{6}
    \gantttitle{Title 1}{6} \\
    \gantttitle{Title 2}{6} \\
    \ganttbar{}{1}{3} \\
    \ganttbar{}{4}{6}
\end{ganttchart}
```

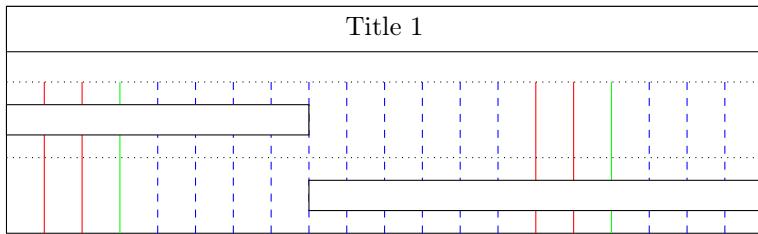

```
/pgfgantt/hgrid [=false/true/⟨style list⟩] false
/pgfgantt/hgrid style /.style=⟨style⟩ dotted
/pgfgantt/vgrid [=false/true/⟨style list⟩] false
```

`hgrid` draws a horizontal grid which starts immediately below the last title element. The key can be specified in four different ways: Firstly, `hgrid=false` eliminates the horizontal grid. You may omit this declaration, since it is the default. Secondly, both `hgrid` and `hgrid=true` activate the horizontal grid, which is then drawn in the default style `dotted`. Finally, `hgrid=⟨style list⟩` draws the horizontal grid in the given `⟨style list⟩` (see below).

`hgrid` style changes the style of single horizontal grid lines that are drawn with `\ganttnewline[grid]` (see section 2.4). The `vgrid` key governs the vertical grid; otherwise, use it exactly like `hgrid`.

Style lists allow you to draw the grid lines in different styles. Each style list consists of several *style list items* separated by a comma. A style list item has the general syntax `*{<n>}{{<style>}}` and orders the package to repeat the `<style>` `<n>`-times. (This syntax is reminiscent of column specifications in a `tabular` environment.) Thus, the list `*2{red}, *1{green}, *{10}{blue, dashed}` instructs `pgfgantt` to draw first two red vertical grid lines, then a green one and finally ten dashed blue lines. If any grid lines remain to be drawn at the end of the list, the package starts again at the beginning of the list.

```
\begin{ganttchart}%
    [hgrid=true,
     vgrid={*2{red}, *1{green}, *{10}{blue, dashed}}]{20}
    \ganttttitle{Title 1}{20} \\
    \ganttbar{}{1}{8} \\
    \ganttbar{}{9}{20}
\end{ganttchart}
```

In most situations, you can omit the multiplier `*1`. Hence, the following style lists are equal:

```
{*1{red}, *1{blue, dashed}}
{{red}, {blue, dashed}}
{red, {blue, dashed}}
```

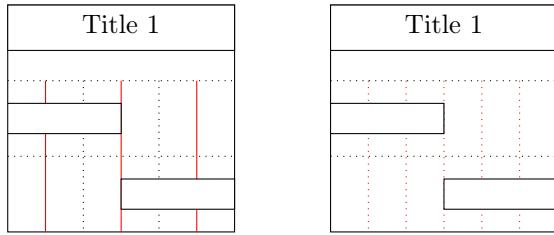

However, if you wish to use a single style comprising two or more keys for all grid lines, e.g. `red, dotted`, you *must* retain the multiplier (i.e., `{*1{red, dotted}}`).

```
% wrong code

\begin{ganttchart}%
    [hgrid=true,
     vgrid={{red, dotted}}]{6}
    \ganttttitle{Title 1}{6} \\
    \ganttbar{}{1}{3} \\
    \ganttbar{}{4}{6}
\end{ganttchart}
```

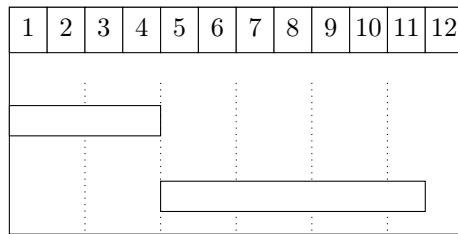

```
% correct code

\begin{ganttchart}%
    [hgrid=true,
     vgrid={*1{red, dotted}}]{6}
    \ganttttitle{Title 1}{6} \\
    \ganttbar{}{1}{3} \\
    \ganttbar{}{4}{6}
\end{ganttchart}
```

In a chart with many time slots, drawing vertical grid lines between all of them will lead to a confusing appearance. In such a case, you can pass an appropriate *<style list>* to `vgrid` in order to draw every second grid line, for example.

```
\begin{ganttchart}%
    [vgrid={draw=none, dotted}]{12}
    \gantttitlelist{1,...,12}{1} \\
    \ganttbar{}{1}{4} \\
    \ganttbar{}{5}{11}
\end{ganttchart}
```

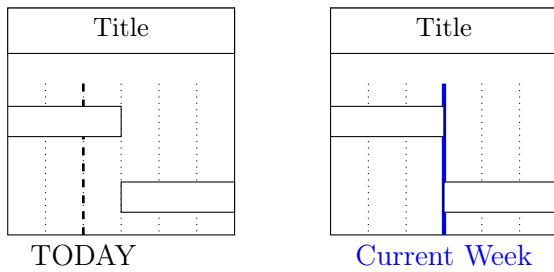

```
/pgfgantt/today =<time slot>                               none
/pgfgantt/today rule /.style=<style>                         dashed, line width=1pt
/pgfgantt/today label =<text>                                TODAY
```

Sometimes, you may wish to indicate the current day, month or the like on a Gantt chart. In order to do so, pass an integer value to the `today` key, which draws a vertical rule at the corresponding *<time slot>*. This rule appears in the *<style>* denoted by `today rule`, while `today label` contains the *<text>* below the rule.

```
\begin{ganttchart}%
    [vgrid, today=2]{6}
    \gantttitle{Title}{6} \\
    \ganttbar{}{1}{3} \\
    \ganttbar{}{4}{6}
\end{ganttchart}
```

```
\begin{ganttchart}%
    [vgrid, today=3,
    today label=\textcolor{blue}{%}%
    {Current Week},%
    today rule/.style=%
    {blue, ultra thick}]{6}
    \gantttitle{Title}{6} \\
    \ganttbar{}{1}{3} \\
    \ganttbar{}{4}{6}
\end{ganttchart}
```

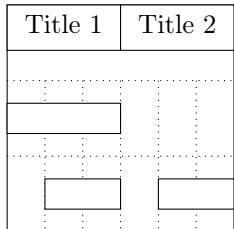

2.4 Line Breaks between Chart Elements

`pgfgantt` does not automatically begin a new line after finishing a chart element. Instead, you must insert an explicit line break with `\ganttnewline`. Within a `ganttchart` environment, `\\\` is defined as a shortcut for `\ganttnewline`, so that the syntax is reminiscent of L^AT_EX's `tabular` environment.

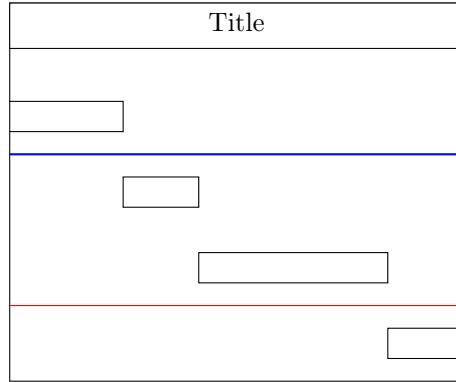

`\ganttnewline`
`\\\`

```
\begin{ganttchart}[hgrid, vgrid]{6}
    \gantttitle{Title 1}{3}
    \gantttitle{Title 2}{3} \\
    \ganttbar{}{1}{3} \ganttnewline
    \ganttbar{}{2}{3}
    \ganttbar{}{5}{6}
\end{ganttchart}
```

Even if you prefer a canvas without a horizontal grid, you may nevertheless want to separate certain lines by a grid rule. For this purpose, specify the optional argument `[grid]` for `\ganttnewline` (or `\\\`), which draws a grid rule in `hgrid style` between the current and the new line. Alternatively, directly give the desired style as optional argument.

```
\begin{ganttchart}[hgrid style/.style=red]{12}
    \gantttitle{Title}{12} \\
    \ganttbar{}{1}{3} \ganttnewline[thick, blue]
    \ganttbar{}{4}{5} \\
    \ganttbar{}{6}{10} \\[grid]
    \ganttbar{}{11}{12}
\end{ganttchart}
```

2.5 Titles

A *title* (comprising one or more lines) at the top of a Gantt chart usually indicates the period of time covered by that chart. For example, the first line could span twelve time slots and display the current year, while the second line could contain twelve elements, each of which corresponds to one month. For these purposes, `pgfgantt` implements two titling commands.

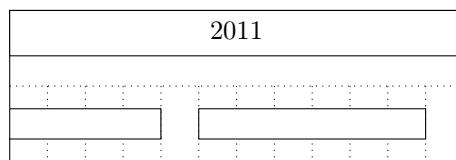

`\ganttttitle` draws a single title element:

`\ganttttitle`

```
\ganttttitle[<options>]{<label>}{<number of time slots>}
```

The *<label>* appears in the center of the title element, which covers the *<number of time slots>* starting from the right end of the last title element (or from the beginning of the line, if the title element is the first element in this line). Mostly, you will employ `\ganttttitle` for titles that span several time slots.

```
\begin{ganttchart}[hgrid, vgrid]{12}
    \ganttttitle{2011}{12} \\
    \ganttbar{}{1}{4}
    \ganttbar{}{6}{11}
\end{ganttchart}
```

Whenever you want to draw a larger number of title elements that are equal in size and follow a common enumeration scheme, the `\ganttttitlelist` macro provides a fast solution:

`\ganttttitlelist`

```
\ganttttitlelist[<options>]{<pgffor list>}{<length of each element>}
```

This macro generates one title element for each member of the $\langle pgffor list \rangle$. The second mandatory argument specifies the $\langle length of each element \rangle$. The TikZ manual describes the syntax for the $\langle pgffor list \rangle$ in more detail, but we will mention two of the most common applications:

1. In order to draw twelve title elements that contain the numbers from 1 to 12 (indicating the months of a year), enter `1, ..., 12` as the $\langle pgffor \rangle$ list.

```
\begin{ganttchart}[hgrid, vgrid]{12}
    \ganttttitlelist{1,...,12}{1} \\
    \ganttbar{}{1}{3}
    \ganttbar{}{5}{12}
\end{ganttchart}
```

1	2	3	4	5	6	7	8	9	10	11	12
.
.
.

Note that we would have obtained the same result if we had written

```
\ganttttitle{1}{1} \ganttttitle{2}{1} ... \ganttttitle{12}{1} \\
```

2. In order to draw seven title elements containing the names of the weekdays (e.g., “Mon” to “Sun”), we have to change the `title list options` key:

```
/pgfgantt/title list options = $\langle pgffor options \rangle$  var=\x, evaluate=\x
```

This key changes the $\langle pgffor options \rangle$ of the `\foreach` command called by `\ganttttitlelist`. Again, the TikZ manual is the definitive reference on possible $\langle pgffor options \rangle$. There is just one thing to keep in mind: The macro that yields the labels to be printed by `\ganttttitlelist` must be called `\x`.

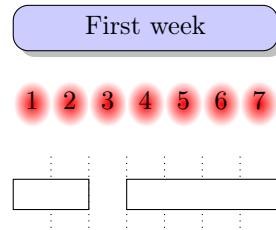

The following example shows how you can implement a title line enumerating the days of the week:

```
\usepackage{pgfcalendar}
...
\begin{ganttchart}[hgrid, vgrid, x unit=1cm]{7}
    \ganttttitlelist[title list options={%
        var=\y, evaluate=\y as \x%
        using "\pgfcalendarweekdayshortname{\y}"%
    }]{0,...,6}{1} \\
    \ganttbar{}{1}{4}
    \ganttbar{}{6}{7}
\end{ganttchart}
```

Mon	Tue	Wed	Thu	Fri	Sat	Sun
.....						
.....						

`/pgfgantt/title /.style=<style>` `fill=white`
Sets the appearance of a title element.

```
\usetikzlibrary{shadows}
\usetikzlibrary{shadings}
...
\begin{ganttchart}[
    vgrid, canvas/.style={draw=none},
    title/.style={fill=blue!20, rounded corners=2mm, drop shadow}]{7}
\gantttitle{First week}{7} \\
\gantttitlelist[title/.style={draw=none, inner color=red}]{1,...,7}{1} \\
\ganttbar{}{1}{2}
\ganttbar{}{4}{7}
\end{ganttchart}
```

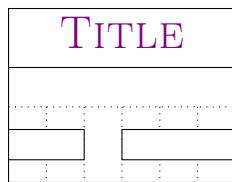

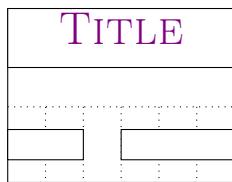

`/pgfgantt/title label font =` `\small`
Selects the font of the text inside a title element. In most cases, you can include font format commands directly in the first mandatory argument of `\gantttitle`. However, you *must* use the `title label font` key if you intend to change the font size. Otherwise, the vertical alignment of the title label will be incorrect with the standard anchor.

```
% Wrong alignment
```

```
\begin{ganttchart}%
    [vgrid, hgrid,
    y unit title=1.3cm]{6}
\gantttitle{%
    \LARGE\color{violet}%
    \scshape Title}{6} \\
\ganttbar{}{1}{2}
\ganttbar{}{4}{6}
\end{ganttchart}
```

```
% Correct alignment
```

```
\begin{ganttchart}%
    [vgrid, hgrid,
    y unit title=1.3cm,
    title label font=\LARGE,
    \color{violet},\scshape]{6}
\gantttitle{Title}{6} \\
\ganttbar{}{1}{2}
\ganttbar{}{4}{6}
\end{ganttchart}
```

```
/pgfgantt/title label anchor /.style=<anchor>
```

```
anchor=mid
```

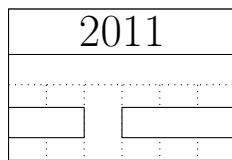

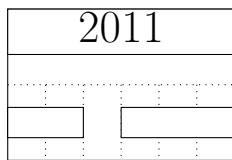

By default, title labels are vertically centered at half their x -height. This yields a good alignment for labels whose letters have equal amounts of ascenders and descenders (e.g., lowercase numbers). However, when the letters contain mostly ascenders (e.g., uppercase numbers), the label position will appear too high. In this case, you should change the anchor:

```
% Badly centered label
```

```
\begin{ganttchart}%
    [vgrid, hgrid,
    title label font=\LARGE]%
    ]{6}
\gantttitle{2011}{6} \\
\ganttbar{}{1}{2}
\ganttbar{}{4}{6}
\end{ganttchart}
```

```
% Nicely centered label
```

```
\begin{ganttchart}%
    [vgrid, hgrid,
    title label font=\LARGE,
    title label anchor/.style=%
        {below=-1.5ex}]{6}
\gantttitle{2011}{6} \\
\ganttbar{}{1}{2}
\ganttbar{}{4}{6}
\end{ganttchart}
```

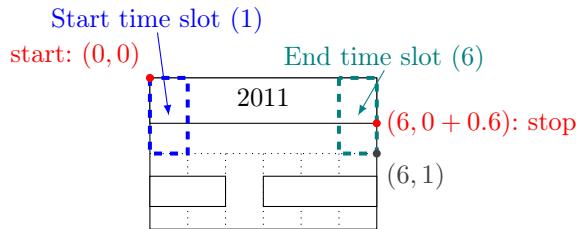

```

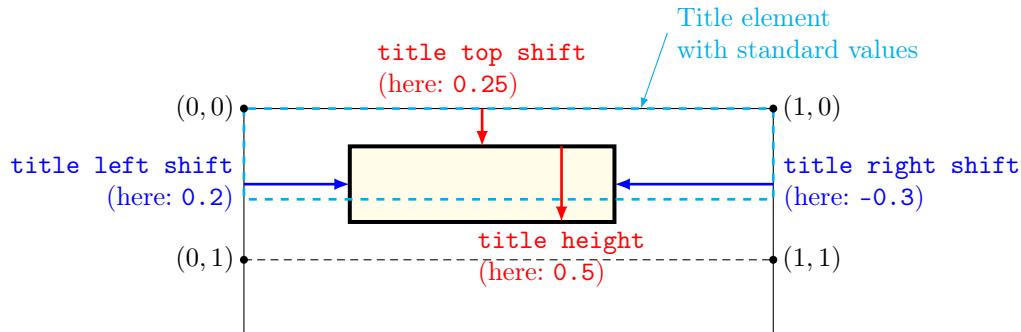

/pgf/gantt/title left shift =⟨factor⟩          0
/pgf/gantt/title right shift =⟨factor⟩         0
/pgf/gantt/title top shift =⟨factor⟩           0
/pgf/gantt/title height =⟨factor⟩            0.6

```

The first three keys shift the coordinates of a title element's borders (or rather of its corners), while `title height` changes its height. By default, the left upper corner of a title element coincides with the origin of the start time slot; its right lower corner touches the right border of the end time slot 0.6 units below the upper line border:

The figure below shows a Gantt chart with two lines and one (large) time slot and indicates the distances modified by these keys.

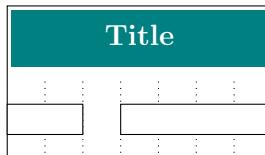

For example, you might devise a layout where the title element does not touch the borders of the start and end time slot.

```

\begin{ganttchart}[vgrid, title/.style={fill=teal, draw=none},
    title label font=\color{white}\bfseries,
    title left shift=.1, title right shift=-.1,
    title top shift=.05, title height=.75]{7}
\gantttitle{Title}{7} \\
\ganttbar{}{1}{2}
\ganttbar{}{4}{7}
\end{ganttchart}

```

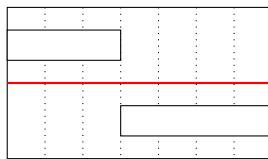

```
/pgfgantt/include title in canvas =⟨boolean⟩ true
```

The canvas normally comprises all lines of the chart. However, you may wish that your title elements only consist of text lacking any frame or background. In this case, the canvas probably should exclude all lines containing title elements, which you achieve by `include title in canvas=false`.

```
\begin{ganttchart}%
  [hgrid={*1{draw=red, thick}}, vgrid,
   title/.style={draw=none, fill=none}, include title in canvas=false]{7}
  \gantttitlelist{1,...,7}{1} \\
  \ganttbar{}{1}{3} \\
  \ganttbar{}{4}{7}
\end{ganttchart}
```

1 2 3 4 5 6 7

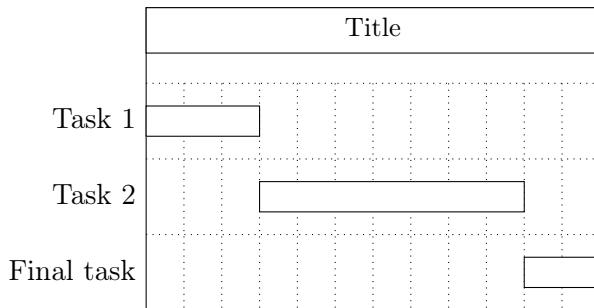

2.6 Bars

On a Gantt chart, a *bar* indicates the duration of a task or one of its parts.

```
\ganttbar[⟨options⟩]{⟨label⟩}{⟨start time slot⟩}{⟨end time slot⟩}
```

The `\ganttbar` macro draws a bar from the `⟨start time slot⟩` to the `⟨end time slot⟩` and adds a `⟨label⟩` at the left of the chart.

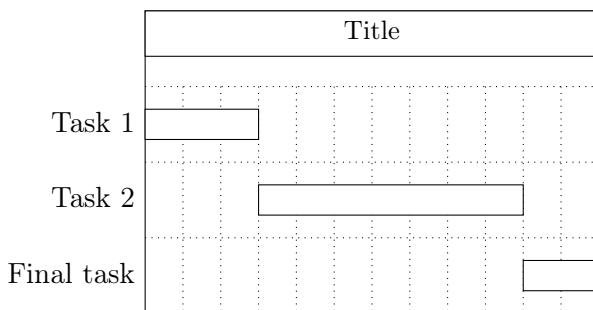

```
\begin{ganttchart}[vgrid, hgrid]{12}
  \gantttitle{Title}{12} \\
  \ganttbar{Task 1}{1}{3} \\
  \ganttbar{Task 2}{4}{10} \\
  \ganttbar{Final task}{11}{12}
\end{ganttchart}
```

```
/pgfgantt/time slot modifier =⟨factor⟩ -1
```

Note that a bar usually touches the left border of the ⟨start time slot⟩ and not the right, as it would if the ⟨start time slot⟩ were strictly interpreted as an *x*-coordinate. However, you may prefer to work with “real” *x*-coordinates instead of time slots. In this case, just set the `time slot modifier` key to zero. This will essentially eliminate the semi-intelligent behavior of `pgfgantt` with respect to the conversion of *x*-coordinates. This feature may prove useful if you decide to use real numbers for some time slots.

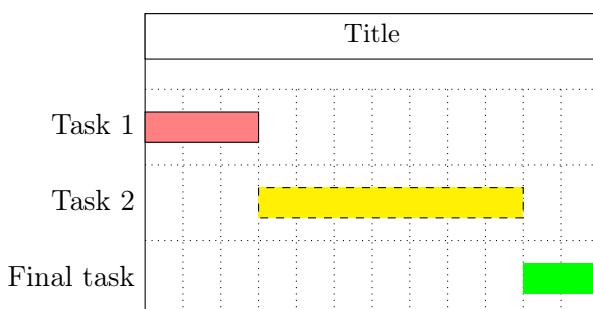

```
\begin{ganttchart}[vgrid, hgrid, time slot modifier=0]{12}
    \gantttitle{Title}{} \\
    \ganttbar{Task 1}{0}{3} \\
    \ganttbar{Task 2}{3}{10} \\
    \ganttbar{Final task}{10}{12}
\end{ganttchart}
```

```
/pgfgantt/bar /.style=⟨style⟩ fill=white
```

Determines the appearance of the bar.

```
\begin{ganttchart}[vgrid, hgrid, bar/.style={fill=red!50}]{12}
    \gantttitle{Title}{} \\
    \ganttbar{Task 1}{1}{3} \\
    \ganttbar[bar/.style={fill=yellow, dashed}]{Task 2}{4}{10} \\
    \ganttbar[bar/.style={fill=green, draw=none}]{Final task}{11}{12}
\end{ganttchart}
```

```

/pgfgantt/bar label text =⟨text⟩                                \strut#1
/pgfgantt/bar label font =⟨font commands⟩                      \normalsize
/pgfgantt/bar label anchor ./style=⟨anchor⟩                  anchor=east

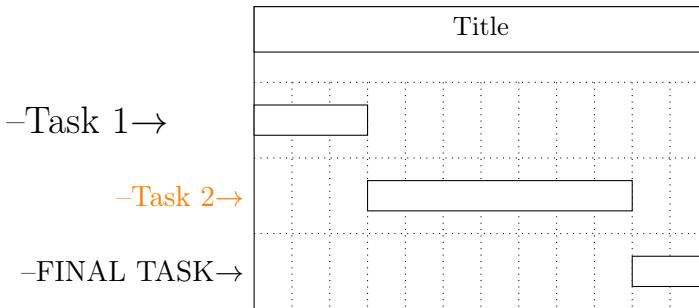

```

The `bar label text` key configures the label `⟨text⟩` next to each bar. This key should contain a single parameter token (#1), which is replaced by the first mandatory argument of `\ganttbar`. The `\strut` in the standard value ensures equal vertical spacing of the labels. `bar label font` selects the font for the bar label, `bar label anchor` determines its anchor. The last control sequence in `⟨font commands⟩` may take a single argument (like `\textit`).

```

\begin{ganttchart}
    [vgrid, hgrid, bar label font=\Large,
    bar label text={--#1$\rightarrow$}]{12} \\
    \gantttitle{Title}{12} \\
    \ganttbar[bar label anchor/.style={left=1cm}]{Task 1}{1}{3} \\
    \ganttbar[bar label font=\color{orange}]{Task 2}{4}{10} \\
    \ganttbar[bar label font=\MakeUppercase]{Final task}{11}{12}
\end{ganttchart}

```

```

/pgfgantt/inline =⟨boolean⟩                                false
/pgfgantt/bar label inline anchor /.style=⟨anchor⟩        anchor=north
/pgfgantt/bar label shape anchor =⟨anchor⟩                center

```

If two or more chart elements appear in a single line, their labels will overlap at the left border of the chart. Thus, you can place the label adjacent to a bar by setting the boolean key `inline` to `true`. This key instructs the package to draw the label at the `bar label shape anchor` of the chart element and use the anchor given by `bar label inline anchor`.

```

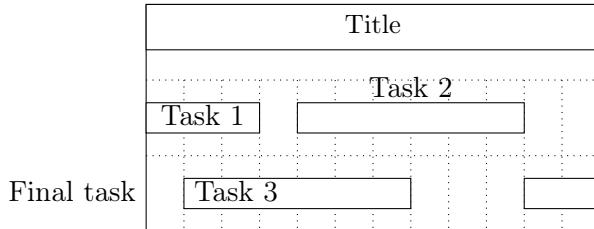

\begin{ganttchart}[vgrid, hgrid, inline]{12}
    \gantttitle{Title}{12} \\
    \ganttbar{Task 1}{1}{3} \\
    \ganttbar[bar label inline anchor/.style=above]{Task 2}{5}{10} \\
    \ganttbar[bar label shape anchor=left,% 

```

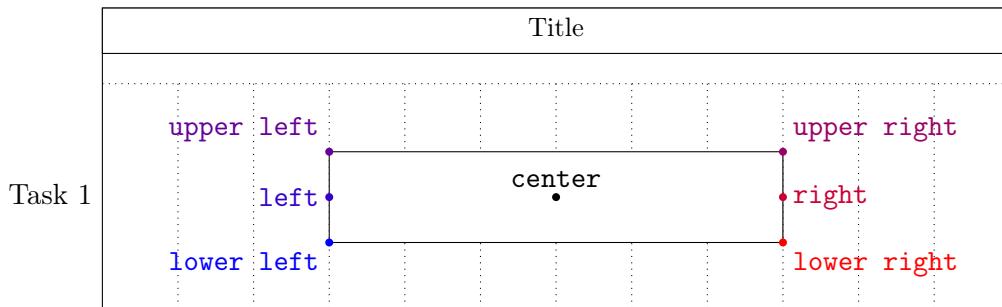

```

    bar label inline anchor/.style=right]{Task 3}{2}{7}
    \ganttbar[inline=false]{Final task}{11}{12}
\end{ganttchart}

```

Valid `<anchor>`s for `bar label shape anchor` are `center`, `lower left`, `left`, `upper left`, `lower right`, `right` and `upper right`.

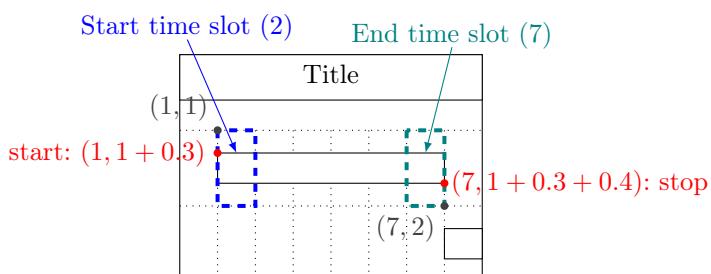

```

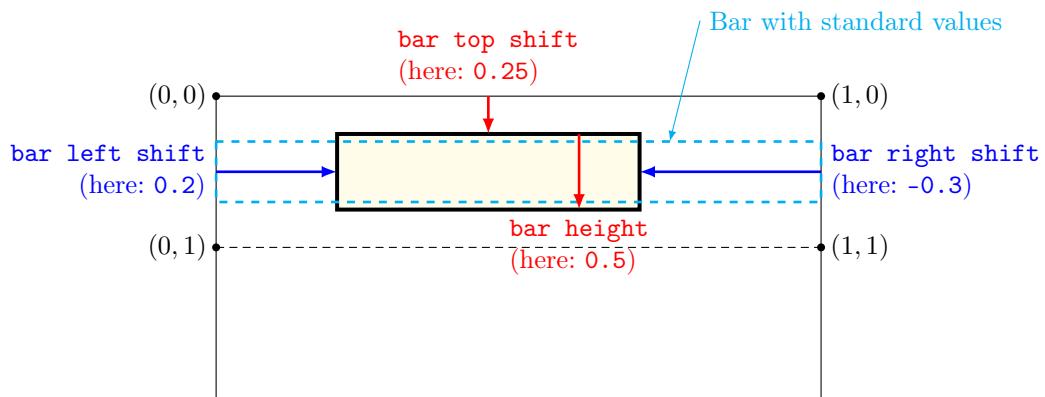

/pgf/gantt/bar left shift =<factor>          0
/pgf/gantt/bar right shift =<factor>         0
/pgf/gantt/bar top shift =<factor>           0.3
/pgf/gantt/bar height =<factor>              0.4

```

The first three keys shift the coordinates of a bar's borders (or rather of its corners), while `bar height` changes its height. By default, the left upper corner of a bar is 0.3 units below the origin of the start time slot; its right lower corner touches the right border of the end time slot 0.4 units below the upper line border:

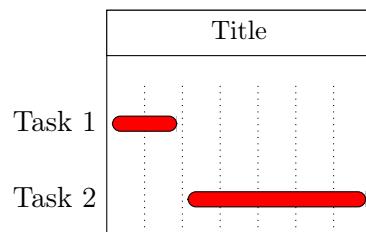

The figure below shows a Gantt chart with two lines and one (large) time slot and indicates the distances modified by these keys.

For example, you might devise a layout with small, rounded bars that do not touch the borders of their start and end time slots.

```
\begin{ganttchart}[vgrid, bar/.style={fill=red, rounded corners=3pt},
  bar left shift=.15, bar right shift=-.15,
  bar top shift=.4, bar height=.2]{7}
\gantttitle{Title}{7} \\
\ganttbar{Task 1}{1}{2} \\
\ganttbar{Task 2}{3}{7}
\end{ganttchart}
```

2.7 Groups

Groups combine several subtasks (represented by bars) into a single task.

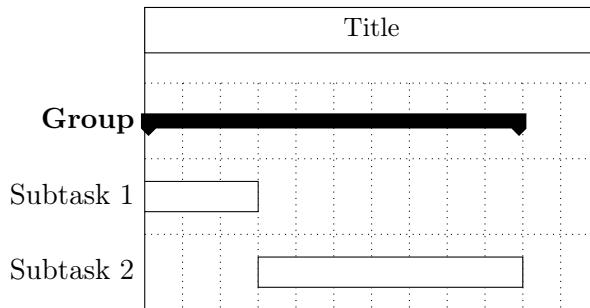

```
\ganttgroup[<options>]{<label>}{<start time slot>}{{<end time slot>}}
```

The `\ganttgroup` macro draws a group from the `<start time slot>` to the `<end time slot>` and adds a `<label>` at the left of the chart. Note that a group will start at the left border of the `<start time slot>` (and not at the right, as it would if the `<start time slot>` were strictly interpreted as an *x*-coordinate). However, setting `time slot modifier` to zero changes this behavior (see section 2.6).

`\ganttgroup`

```
\begin{ganttchart}[vgrid, hgrid]{12}
\gantttitle{Title}{12} \\
```

```
\ganttgroup{Group}{1}{10} \\
\ganttbar{Subtask 1}{1}{3} \\
\ganttbar{Subtask 2}{4}{10} \\
\end{ganttchart}
```

/pgfgantt/group /.style=<style> fill=black
Changes the appearance of a group.

```
\begin{ganttchart}
    [vgrid, hgrid,
    group/.style={draw=black, fill=green!50}] {12}
    \gantttitle{Title} {12} \\
    \ganttgroup{Group}{1}{10} \\
    \ganttdots{Subtasks}{1}{3}
    \ganttdots{}{5}{10}
\end{ganttchart}
```

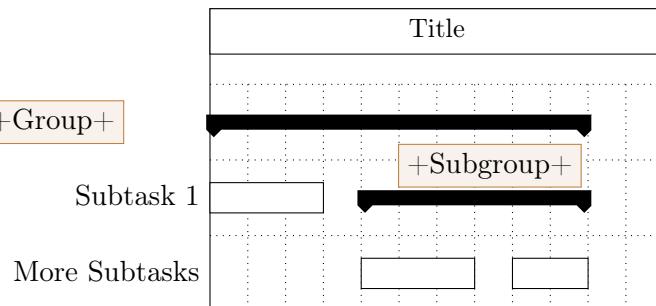

/pgfgantt/group label text =<text> \strut#1
/pgfgantt/group label font = \normalsize\bfseries
/pgfgantt/group label anchor /.style=<anchor> anchor=east
/pgfgantt/group label inline anchor /.style=<anchor> anchor=north
/pgfgantt/group label shape anchor =<anchor> center
The **group label text** key configures the label *<text>* next to each group. This key should contain a single parameter token (#1), which is replaced by the first mandatory argument of `\ganttgroup`. The `\strut` in the standard value ensures

equal vertical spacing of the labels. `group label font` selects the font of the group label, `group label anchor` determines its anchor. The last control sequence in `` may take a single argument (like `\textit`).

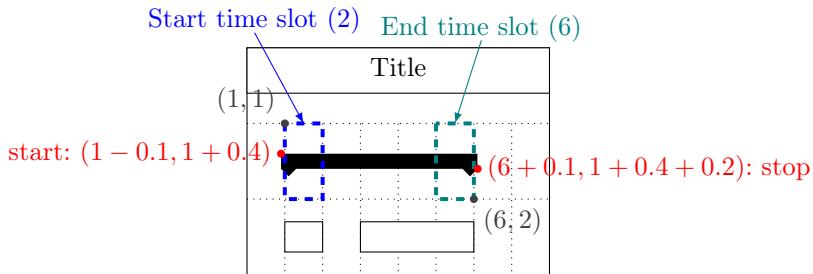

The `inline` key moves the label to the `group label shape anchor` of the group, using the anchor given by `group label inline anchor`. For the former key, you may use the same values as for `bar label shape anchor` (see section 2.6).

```
\begin{ganttchart}%
    [vgrid, hgrid,
    group label font={\fcolorbox{brown}{brown!10}},
    group label anchor/.style={left=1cm},
    group label text={+#1+}{12}
    \gantttitle{Title}{12} \\
    \ganttgroup{Group}{1}{10} \\
    \ganttbar{Subtask 1}{1}{3}
    \ganttgroup[inline, group label inline anchor/.style=above left,%]{Subgroup}{5}{10} \\
    \ganttbar{More Subtasks}{5}{7}
    \ganttbar{}{9}{10}
\end{ganttchart}
```

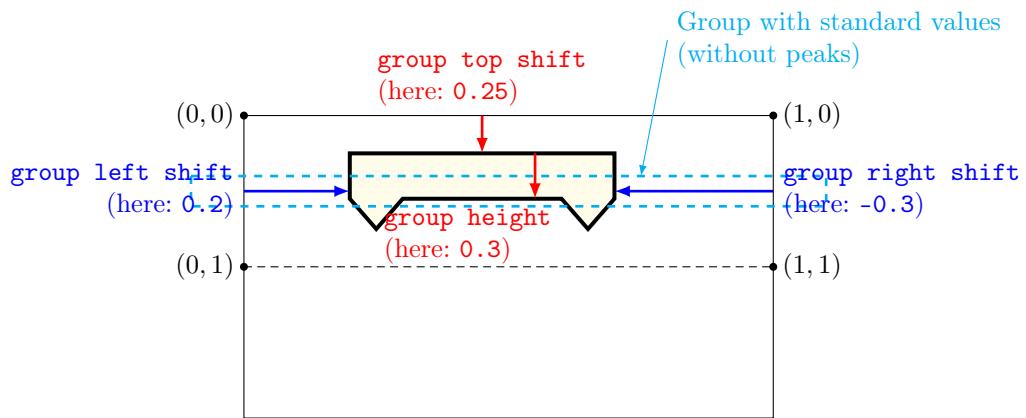

<code>/pgfgantt/group left shift =<factor></code>	-0.1
<code>/pgfgantt/group right shift =<factor></code>	0.1
<code>/pgfgantt/group top shift =<factor></code>	0.4
<code>/pgfgantt/group height =<factor></code>	0.2

The first three keys shift the coordinates of a group's borders (or rather of its corners), while `group height` changes its height. By default, the left upper corner of a group is 0.1 units left of and 0.4 units below the start time slot origin; its right lower corner (not counting the peak) lies 0.1 units right of and 0.3 units below the right border of the end time slot:

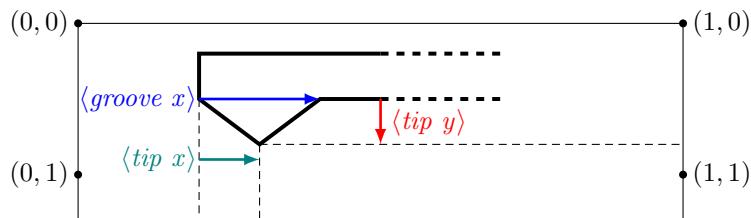

The figure below shows a Gantt chart with two lines and one (large) time slot and indicates the distances modified by these keys.

```
/pgfgantt/group left peak ={\langle tip x \rangle}{\langle groove x \rangle}{\langle tip y \rangle}
/pgfgantt/group right peak ={\langle tip x \rangle}{\langle groove x \rangle}{\langle tip y \rangle}
/pgfgantt/group peaks ={\langle tip x \rangle}{\langle groove x \rangle}{\langle tip y \rangle} 0.2 0.4 0.1
```

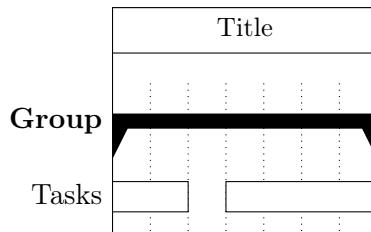

These keys govern the appearance of the peaks at both ends of a group. By default, the tip of each peak lies 0.2 units inward from a group's bottom corner and 0.1 units beneath, while the groove lies 0.4 units inward. While `group left peak` applies only to the left peak and `group right peak` affects only the right peak, `group peaks` sets the dimensions for both peaks simultaneously. You always have to specify three arguments for these keys. However, if you leave one of them blank, the corresponding space parameter retains its current value.

The figure below exemplifies the space parameters as they apply to the left peak.

For example, you might prefer that your groups stay within the start and end time slot, and that the peaks are more acute:

```
\begin{ganttchart}%
    [vgrid, group left shift=0, group right shift=0,
    group peaks={0}{0}{.4}]{7}
    \gantttitle{Title}{7} \\
    \ganttgroup{Group}{1}{7} \\
    \ganttbar{Tasks}{1}{2}
    \ganttbar{}{4}{7}
\end{ganttchart}
```

2.8 Progress Bars and Progress Groups

Progress bars and *progress groups* illustrate the extent to which a (sub-)task has been completed. In order to draw a progress element, you simply specify the `progress` key in the optional argument to the respective standard macro.

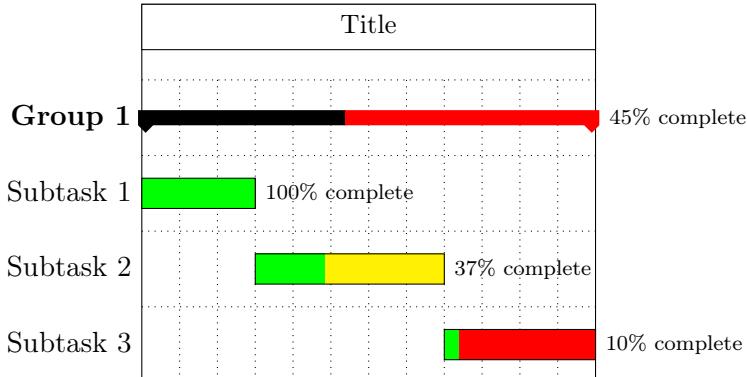

```
/pgf/gantt/progress =none/{number}                                none
/pgf/gantt/bar incomplete /.style={style}
/pgf/gantt/group incomplete /.style={style}
/pgf/gantt/incomplete /.style={style}                               fill=black!25
```

The `progress` key specifies that a task (represented by a bar) or a group thereof is $\langle number \rangle$ percent complete. Starting from the left, $\langle number \rangle$ percent of the element's area appear in the basic style (i.e., `bar` or `group`), while the `bar incomplete` and `group incomplete` keys, respectively, determine the appearance of the remainder. For convenience, the `incomplete` key simultaneously sets the incomplete style for bars and groups.

```
\begin{ganttchart}%
    [vgrid, hgrid, bar/.style={fill=green}, %
     incomplete/.style={fill=red}]{12}
    \gantttitle{Title}{12} \\
    \ganttgroup[progress=45]{Group 1}{1}{12} \\
    \ganttbar[progress=100]{Subtask 1}{1}{3} \\
    \ganttbar[progress=37, bar incomplete/.style={fill=yellow}]{Subtask 2}{4}{8} \\

```

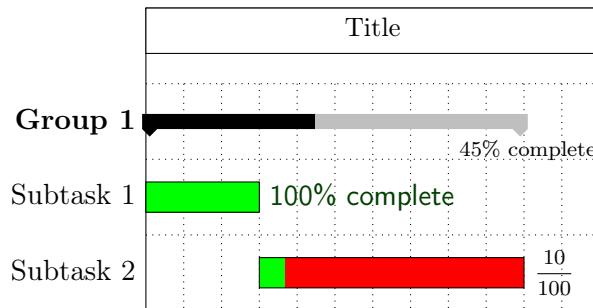

```
\ganttbar[progress=10]{Subtask 3}{9}{12}
\end{ganttchart}
```

```
/pgfgantt/progress label text =〈text〉 #1\% complete
/pgfgantt/progress label font =〈font commands〉 \scriptsize
/pgfgantt/progress label anchor /.style={anchor} anchor=west
```

The `progress label text` key sets the `〈text〉` that appears beside each progress element in order to indicate its completeness. This key may contain a single parameter token (#1), which is replaced by the value of `progress`. The label is typeset in the `progress label font`. In addition, `progress label anchor` governs its placement. By changing the default value, you may prevent the label from overlapping with other elements of your chart.

```
\begin{ganttchart}[vgrid, hgrid, bar/.style={fill=green}]{12}
\gantttitle{Title}{12} \\
\ganttgroup%
  [progress=45, progress label anchor/.style={below=3pt}] %
  {Group 1}{1}{10} \\
\ganttbar%
  [progress=100, progress label font=\color{green!25!black}\textsf] %
  {Subtask 1}{1}{3} \\
\ganttbar%
  [progress=10, incomplete/.style={fill=red},
  progress label text={$\displaystyle\frac{\#1}{100}$}] %
  {Subtask 2}{4}{10}
\end{ganttchart}
```

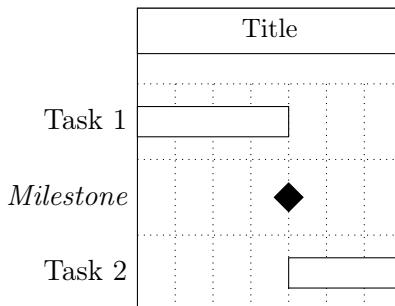

2.9 Milestones

A *milestone* signifies that an important task has been completed or that a crucial goal has been reached.

```
\ganttmilestone[⟨options⟩]{⟨label⟩}{⟨time slot⟩}
```

The `\ganttmilestone` macro draws a milestone at the given *⟨time slot⟩* and adds a *⟨label⟩* at the left of the chart.

```
\begin{ganttchart}[vgrid, hgrid]{7}
    \gantttitle{Title}{7} \\
    \ganttbar{Task 1}{1}{4} \\
    \ganttmilestone{Milestone}{4} \\
    \ganttbar{Task 2}{5}{7}
\end{ganttchart}
```

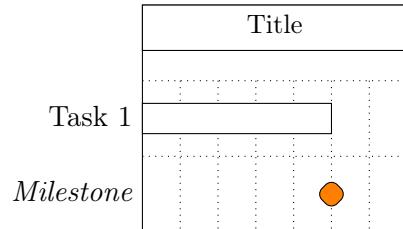

Note that the milestone is usually centered on the vertical grid line between its *⟨time slot⟩* and the following one.

```
/pgf/gantt/milestone/.style={⟨style⟩} fill=black
```

Determines the appearance of the milestone.

```
\begin{ganttchart}%
    [vgrid, hgrid,
    milestone/.style={fill=orange, draw=black, rounded corners=3pt}]{7}
```

```
\gantttitle{Title}{7} \\
\ganttbar{Task 1}{1}{5} \\
\ganttmilestone{Milestone}{5}
\end{ganttchart}
```

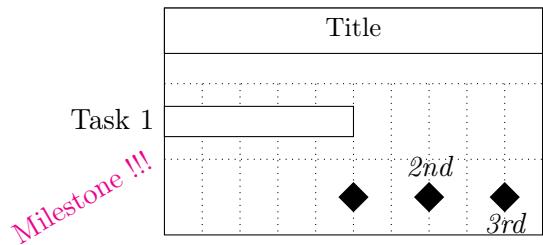

```
/pgfgantt/milestone label text =⟨text⟩                                \strut#1
/pgfgantt/milestone label font =⟨font commands⟩      \normalsize\itshape
/pgfgantt/milestone label anchor /.style=⟨anchor⟩      anchor=east
/pgfgantt/milestone label inline anchor /.style=⟨anchor⟩    anchor=south
/pgfgantt/milestone label shape anchor =⟨anchor⟩        center
```

The `milestone label text` key configures the label `⟨text⟩` next to each milestone. This key should contain a single parameter token (#1), which is replaced by the first mandatory argument of `\ganttmilestone`. The `\strut` in the standard value ensures equal vertical spacing of the labels. `milestone label font` sets the font of the milestone label, while `milestone label anchor` determines its placement. The last macro in `⟨font commands⟩` may take a single argument, as we show in the following (somewhat silly) example.

The `inline` key moves the label to the `milestone label shape anchor` of the milestone, using the `⟨anchor⟩` given by `milestone label inline anchor`. For the former key, you may use the same values as for `bar label shape anchor` (see section 2.6).

```
\begin{ganttchart}[vgrid, hgrid]{10}
\gantttitle{Title}{10} \\
\ganttbar{Task 1}{1}{5} \\
\ganttmilestone%
  [milestone label font=\color{magenta}\rotatebox{30},
  milestone label text={#1 !!!}]{Milestone}{5}
\ganttmilestone[inline]{2nd}{7}
\ganttmilestone%
  [inline, milestone label inline anchor/.style=below]{3rd}{9}
\end{ganttchart}
```

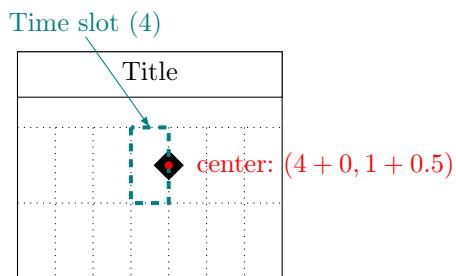

```

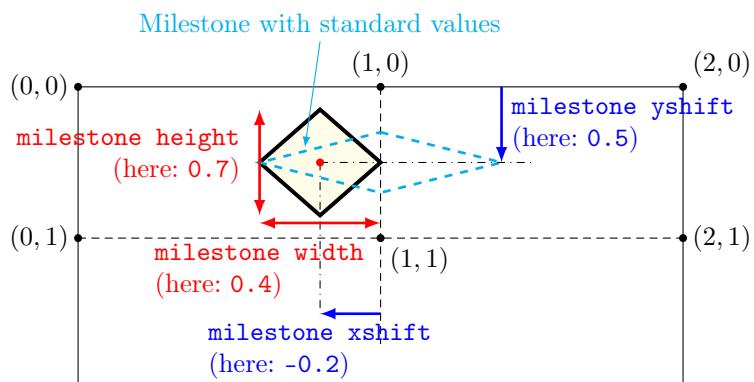

/pgf/gantt/milestone width =⟨factor⟩          0.8
/pgf/gantt/milestone height =⟨factor⟩         0.4
/pgf/gantt/milestone xshift =⟨factor⟩          0
/pgf/gantt/milestone yshift =⟨factor⟩          0.5

```

These keys set the width and height of a milestone and shift the coordinates of its center. By default, a milestone is 0.8 units wide and 0.4 units high. Since the ideal x -vector/ y -vector ratio is 1 : 2, the milestone appears square with these settings. Its center lies on the right border and 0.5 units below the top border of its time slot.

The figure below shows a Gantt chart with a single milestone and two (large) time slots; it indicates the distances modified by the four keys explained above.

2.10 Links

So far, we have drawn charts whose elements were quite independent of each other. However, relations or *links* between these elements frequently appear on real Gantt

charts. For example, a task may only start if a previous one has been completed, or finishing a task may constitute a milestone.

```
\ganttlink[<options>]{<start element name>}{<end element name>}
```

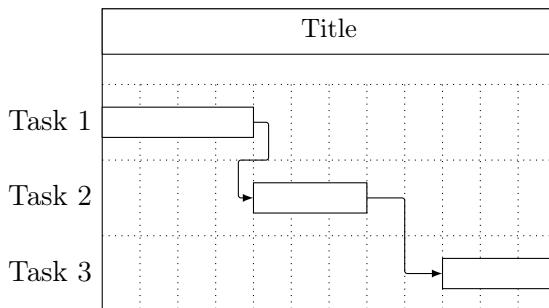

/pgfgantt/name =*<name>* (empty)

The `\ganttlink` macro connects two elements, which are specified by their *<name>*s. By default, chart elements are named automatically: The first one receives the name `elem0`, the second one is called `elem1` and so on. However, the `name` key allows you to assign a name to each chart element.

`\ganttlink`

```
\begin{ganttchart}%
  [vgrid, hgrid]{12}
  \ganttttitle{Title}{12} \\
  \ganttbar{Task 1}{1}{4} \\
  \ganttbar{Task 2}{5}{7} \\
  \ganttbar{Task 3}{10}{12}
  \ganttlink{elem0}{elem1}
  \ganttlink{elem1}{elem2}
\end{ganttchart}
```

```
\begin{ganttchart}%
  [vgrid, hgrid]{12}
  \ganttttitle{Title}{12} \\
  \ganttbar[name=b1]{Task 1}{1}{4} \\
  \ganttbar[name=b2]{Task 2}{5}{7} \\
  \ganttbar[name=xyz]{Task 3}{10}{12}
  \ganttlink{b1}{b2}
  \ganttlink{b2}{xyz}
\end{ganttchart}
```

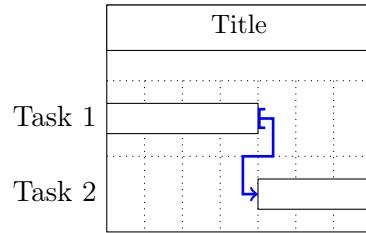

/pgfgantt/link /.style=*<style>*

-latex, rounded corners=1pt

Sets the appearance of the link.

```
\begin{ganttchart}%
  [vgrid, hgrid,
  link/.style={[-to, line width=1pt, blue]}]{7}
  \ganttttitle{Title}{7} \\
  \ganttbar{Task 1}{1}{4} \\
  \ganttbar{Task 2}{5}{7}
  \ganttlink{elem0}{elem1}
\end{ganttchart}
```

`/pgfgantt/link type =⟨type⟩` auto

Link types fall into several categories:

1. *Automatic links* are arrow-like. As you can see from the examples above, they consist of three segments (two horizontal, one vertical) if their start and end time slots are sufficiently separated. Otherwise, they comprise five segments (three horizontal, two vertical). Three keys further modify the appearance of automatic links:

`/pgfgantt/link mid =⟨factor⟩` 0.5

The `link mid` key changes the position of the single vertical segment (in three-part links) or of the middle horizontal segment (in five-part links). By default, these segments are horizontally centered between the left and the right vertical segment, or vertically centered between the upper and the lower horizontal segment, respectively.

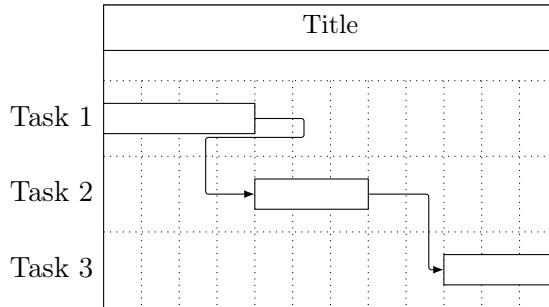

`/pgfgantt/link bulge =⟨factor⟩` 0.4

In five-part links, the upper and lower vertical segments are shifted along the *x*-axis by `+link bulge` and `-link bulge`, respectively.

`/pgfgantt/link tolerance =⟨factor⟩` 0.6

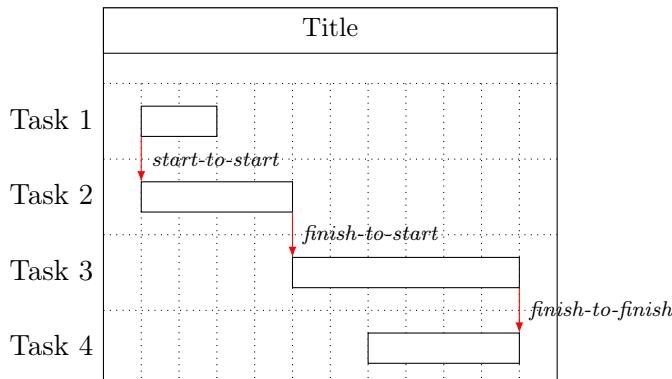

This key governs whether pgfgantt draws a five- or a three-part link. If the true *x*-coordinates of the link start and end differ by at least `link tolerance` (this is the case for the second link in the example below), the package draws a five-part link.

```
\begin{ganttchart}[vgrid, hgrid, link mid=.25, link bulge=1.3]{12}
    \gantttitle{Title}{12} \\
    \ganttbar{Task 1}{1}{4} \\
    \ganttbar{Task 2}{5}{7} \\
    \ganttbar{Task 3}{10}{12}
    \ganttlink{elem0}{elem1}
    \ganttlink[link mid=.8]{elem1}{elem2}
\end{ganttchart}
```

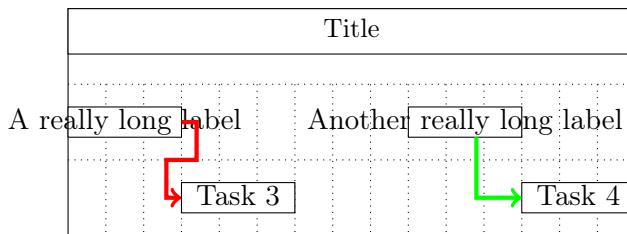

2. *Straight links* are only meant for connecting two bars in order to establish start-to-finish relations (**s-f**), start-to-start relations (**s-s**) etc. Their `<type>` identifiers commemorate the syntax for specifying arrow tips in TikZ: Each identifier is composed of two letters separated by a hyphen.

```
\begin{ganttchart}[vgrid, hgrid, link/.style={-latex, red}]{12}
    \gantttitle{Title}{12} \\
    \ganttbar{Task 1}{2}{3} \\
    \ganttbar{Task 2}{2}{5} \\
    \ganttbar{Task 3}{6}{11} \\
    \ganttbar{Task 4}{8}{11} \\
    \ganttlink[link type=s-s]{elem0}{elem1} \\
    \ganttlink[link type=f-s]{elem1}{elem2} \\
    \ganttlink[link type=f-f]{elem2}{elem3}
\end{ganttchart}
```

3. *Custom links* allow you to define completely new link types. Strictly speaking, automatic and straight links are predefined custom links whose code supports the keys mentioned above (section 3.11 presents the TikZ code of these links). For instance, `pgfgantt` provides one additional link type, `dr` (short for “down-right”). This type is convenient for connecting inline-labeled bars if the label of the start bar protrudes from its right border.

```
\begin{ganttchart}%
    [vgrid, hgrid, inline,
    link/.style={->, ultra thick}]{15}
\gantttitle{Title}{15} \\
\ganttbar{A really long label}{1}{3}
\ganttbar{Another really long label}{10}{12} \\
\ganttbar{Task 3}{4}{6}
\ganttbar{Task 4}{13}{15}
\ganttlink[link/.append style=red]{elem0}{elem2}
\ganttlink[link/.append style=green, link type=dr]{elem1}{elem3}
\end{ganttchart}
```

The central macro for creating link types is

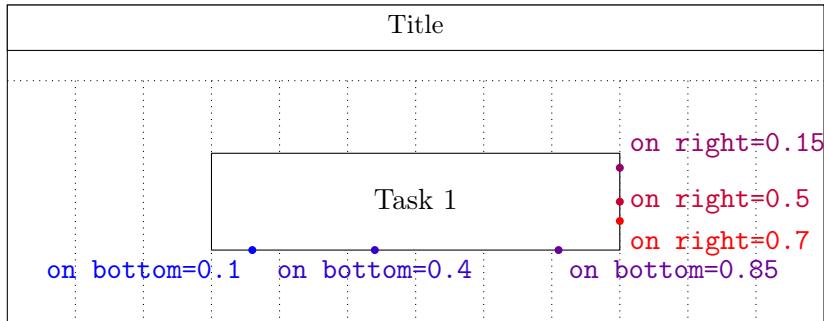

```
\newganttlinktype{\langle type \rangle}{\langle TikZ code \rangle}
```

It defines a new link $\langle type \rangle$ which is drawn by the given $\langle TikZ code \rangle$. When you write this code, you do not have to know the final absolute coordinates of each link type instance. On the contrary, several commands that are only available in the second argument of `\newganttlinktype` help you to design generic link types:

- First, you have to choose the border points of the chart elements the link will connect. For this purpose, `\ganttsetstartanchor{\langle anchor \rangle}` and `\ganttsetendanchor{\langle anchor \rangle}` select an $\langle anchor \rangle$ of the start and end element, respectively. Valid $\langle anchor \rangle$ s are `lower left`, `left` etc. (see section 2.6) and the special anchors `on left`, `on top`, `on right` and `on bottom`. You may specify a value between 0 and 1 for each of the latter four anchors (the default value is 0.5). This fraction indicates a position between the left and right (for `on top` and `on bottom`) or upper and lower border (for `on left` and `on right`), similarly to the `/tikz/pos` key.

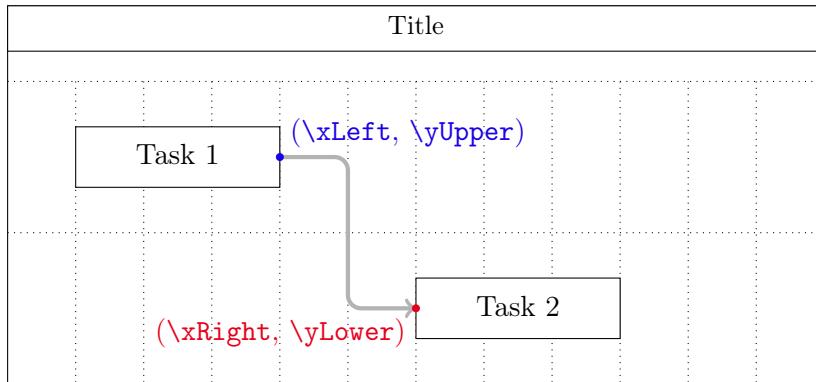

`\newganttlinktype`

`\ganttsetstartanchor`
`\ganttsetendanchor`

`pgfgantt` sets the default anchors to `\ganttsetstartanchor{right}` and `\ganttsetendanchor{left}`, so you even may omit these two commands.

- The two macro pairs `\xLeft/\yUpper` and `\xRight/\yLower` provide the *x*- and *y*-coordinates of the link start and end points, respectively.

- `\ganttlinklabel` contains the label that you may assign to each link type via `\setganttlinklabel` or the `link label` key (see below).
- You can access any values stored in the package's `\ganttvalueof{<key>}`s with the macro `\ganttvalueof{<key>}`.
- Remember that you can use the style `/pgfgantt/link` to ensure a uniform appearance of all your link types.

`\ganttlinklabel`

`\ganttvalueof`

```
\newganttlinktypealias{\newtype}{\existingtype}
```

`\newganttlinktypealias` lets a `\newtype` equal an `\existingtype`, also copying any label that has been set for the `\existingtype`.

`\newganttlinktypealias`

```
\setganttlinklabel{\type}{\label}
```

`\setganttlinklabel` sets a `\label` for the given link `\type`. In the following example, note how `sta-to-sta` and `s-s` share a common label, while we change the label of `fin-to-fin`.

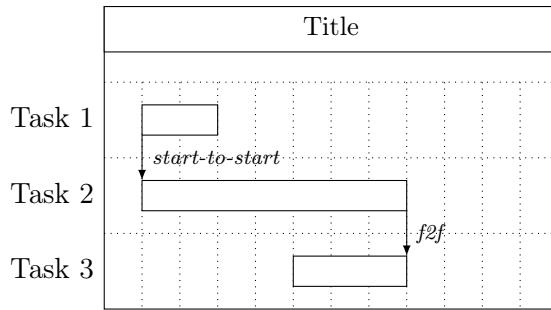

`\setganttlinklabel`

```

\newganttlinktype{alias}{sta-to-sta}{s-s}
\newganttlinktype{alias}{fin-to-fin}{f-f}
\setganttlinklabel{fin-to-fin}{f2f}

\begin{ganttchart}[vgrid, hgrid]{12}
    \gantttitle{Title}{} \\
    \ganttbar{Task 1}{2}{3} \\
    \ganttbar{Task 2}{2}{8} \\
    \ganttbar{Task 3}{6}{8}
    \ganttlink[link type=sta-to-sta]{elem0}{elem1}
    \ganttlink[link type=fin-to-fin]{elem1}{elem2}
\end{ganttchart}

```

Let's put it all together and devise two new link types. Firstly, `zigzag` connects the lower right corner of the start element and the upper left corner of the end element with a thick, cyan line decorated by a zigzag pattern.

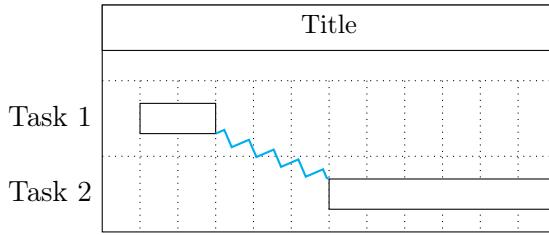

```

\usetikzlibrary{decorations.pathmorphing}

\newganttlinktype{zigzag}{%
    \ganttsetstartanchor{on right=1}%
    \ganttsetendanchor{on left=0}%
    \draw [decoration=zigzag, decorate, thick, cyan]
        (\xLeft, \yUpper) --
        (\xRight, \yLower);%
}

\begin{ganttchart}[vgrid, hgrid]{12}
    \gantttitle{Title}{} \\
    \ganttbar{Task 1}{2}{3} \\
    \ganttbar{Task 2}{7}{12}
    \ganttlink[link type=zigzag]{elem0}{elem1}
\end{ganttchart}

```

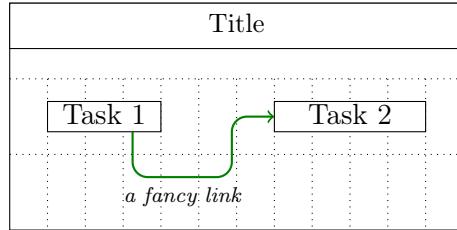

Secondly, `drur` (short for down-right-up-right) draws a labelled arrow in the default style `link`. The link starts at the bottom of the first element and connects to the left border of the second one. In addition, the known keys `link mid` and `link bulge` decide where the line going up is positioned and how far the first line going right is below the start coordinate, respectively.

```
\newganttlinktype{drur}{%
\ganttsetstartanchor{on bottom=0.75}%
\ganttsetendanchor{left}%
\draw [/pgfgantt/link]
% first segment (down)
(\xLeft, \yUpper) --
% second segment (right)
(\xLeft, \yUpper -
\ganttvalueof{link bulge} * \ganttvalueof{y unit chart}) --
% link label
node [pos=.5, /pgfgantt/link label anchor] {\ganttlinklabel}%
% third segment (up)
($(\xLeft,
\yUpper -
\ganttvalueof{link bulge} * \ganttvalueof{y unit chart})!%
\ganttvalueof{link mid}!%
(\xRight,
\yUpper -
\ganttvalueof{link bulge} * \ganttvalueof{y unit chart}))$) --
% last segment (right again)
($(\xLeft, \yLower)!%
\ganttvalueof{link mid}!%
(\xRight, \yLower)$) --
(\xRight, \yLower);%
}
\setganttlinklabel{drur}{a fancy link}

\begin{ganttchart}%
[vgrid, hgrid,
link/.style={thick, ->, green!50!black, rounded corners=2mm},
link label anchor/.style=below,
link mid=.7, link bulge=.6]{12}%
\ganttttitle{Title}{} \\
\ganttbar[inline]{Task 1}{2}{4}
```

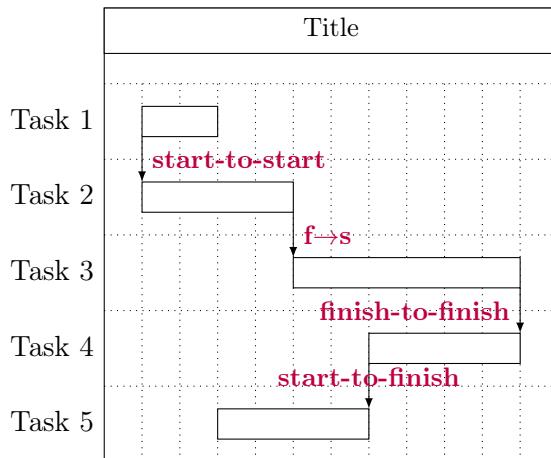

```
\ganttbar[inline]{Task 2}{8}{11} \\
\ganttlink[link type=drur]{elem0}{elem1} \\
\end{ganttchart}
```

(Please do not include the comments following the `\draw` command if you copy the code above – they might confuse TikZ and generate tons of errors.)

```
/pgfgantt/link label =<label>                                (empty)
/pgfgantt/link label font =<font>          \scriptsize\itshape\normalcolor
/pgfgantt/link label anchor /.style=<anchor>      anchor=west
The link label key locally overrides any label specified by \setganttlinklabel.
link label font sets the <font> for the label, link label anchor determines its
placement (by default, the label appears to the right of the straight link's center).
```

```
\begin{ganttchart}[vgrid, hgrid,
  link label font=\small\color{purple}\textbf]{12}
  \gantttitle{Title}{} \\
  \ganttbar{Task 1}{2}{3} \\
  \ganttbar{Task 2}{2}{5} \\
  \ganttbar{Task 3}{6}{11} \\
  \ganttbar{Task 4}{8}{11} \\
  \ganttbar{Task 5}{4}{7} \\
  \ganttlink[link type=s-s]{elem0}{elem1} \\
  \ganttlink[link type=f-s, link label={f$\rightarrow$ s}]{elem1}{elem2} \\
  \ganttlink[link type=f-f, link label anchor/.style={anchor=east}]% \\
  {elem2}{elem3} \\
  \ganttlink[link type=s-f, link label anchor/.style={anchor=base}]% \\
  {elem3}{elem4} \\
\end{ganttchart}
```

2.11 Linked Bars and Linked Milestones

Since you'll most likely draw a lot of arrow-like links between bars and milestones, `pgfgantt` provides two convenient shortcuts for these tasks:

```
\ganttlinkedbar[<options>]{<label>}{<start time slot>}{<end time slot>}
\ganttlinkedmilestone[<options>]{<label>}{<time slot>}
```

These macros work exactly like the standard versions, but they additionally draw a link from the previous element to the bar or milestone. In the following example, the code on the left is equivalent to the code on the right.

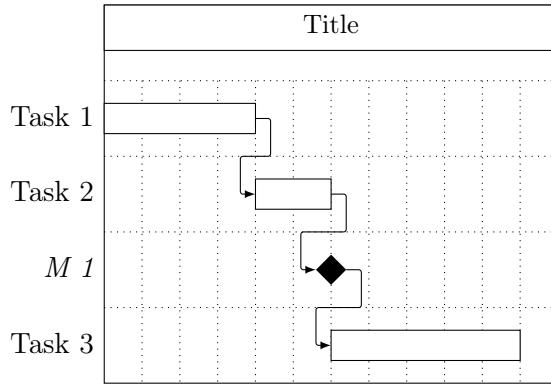

```
\ganttlinkedbar
\ganttlinkedmilestone
```

% Short version

```
\begin{ganttchart}%
    [vgrid, hgrid]{12}
    \gantttitle{Title}{12} \\
    \ganttbar{Task 1}{1}{4} \\
    \ganttlinkedbar{Task 2}{5}{6} \\
    \ganttlinkedmilestone{M 1}{6} \\
    \ganttlinkedbar{Task 3}{7}{11}
\end{ganttchart}
```

% Long version

```
\begin{ganttchart}%
    [vgrid, hgrid]{12}
    \gantttitle{Title}{12} \\
    \ganttbar{Task 1}{1}{4} \\
    \ganttbar{Task 2}{5}{6} \\
    \ganttmilestone{M 1}{6} \\
    \ganttbar{Task 3}{7}{11}
    \ganttlink{elem0}{elem1}
    \ganttlink{elem1}{elem2}
    \ganttlink{elem2}{elem3}
\end{ganttchart}
```

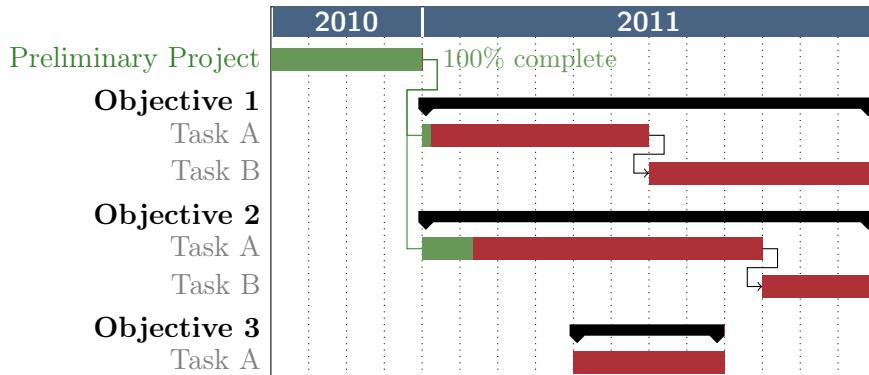

2.12 Style Examples

The first example plays around with colors and notably uses equal x - and y -vectors.

```
\begin{ganttchart}%
[y unit title=0.4cm,
y unit chart=0.5cm,
vgrid,
title/.style={draw=none, fill=RoyalBlue!50!black},
title label font=\sffamily\bfseries\color{white},
title label anchor/.style={below=-1.6ex},

The second example demonstrates that `pgfgantt` is really flexible: Even an appearance quite different from the standard layout is possible. (More precisely, the code below tries to reproduce the Gantt chart from the English Wikipedia site, see http://en.wikipedia.org/wiki/Gantt_chart.)

```

3 Implementation

3.1 Packages

`pgfgantt` is modest in terms of dependencies: It only requires the TikZ package and some of its libraries.

```
1 \RequirePackage{tikz}
2   \usetikzlibrary{arrows,backgrounds,calc,patterns,positioning}
3
```

3.2 Global Counters and Booleans

We define a number of global counters: `ggtt@width` equals the number of time slots. `ggtt@currentline` holds the current line; it starts from 0 and decreases. `ggtt@lasttitleline` equals the line of the title element drawn last. Furthermore, `ggtt@lasttitleslot` corresponds to the x -coordinate of its right border. `ggtt@elementid` enumerates the automatic names of chart elements. `ggtt@currgrid` is the index of the current grid line drawn.

```
4 \newcounter{ggtt@width}
5 \newcounter{ggtt@currentline}
6 \newcounter{ggtt@lasttitleline}
7 \newcounter{ggtt@lasttitleslot}
8 \newcounter{ggtt@elementid}
9 \newcounter{ggtt@currgrid}
```

The macros `\ggtt@lastelement` and `\ggtt@currentelement` save the name of the current and last chart element drawn. Thereby, the `\ganttlinked...` macros can add a link connecting them.

```
\ggtt@lastelement
\ggtt@currentelement
\ifggtt@intitle
```

The boolean `\ifggtt@intitle` is true at the start of a `ganttchart` environment and set to false as soon as the first non-title element is encountered.

```
10 \def\ggtt@lastelement{}
11 \def\ggtt@currentelement{}
12 \newif\ifggtt@intitle
13
```

3.3 Macros for Key Management

`\ganttset` changes the current key path to `/pgfgantt/` and then executes the keys in its mandatory argument. `\ganttset`

```
14 \def\ganttset#1{\pgfqkeys{/pgfgantt}{#1}}
15
```

The following three auxiliary macros save us some code when we devise keys later on. Firstly, `\@ggtt@keydef{\langle key\rangle}{\langle initial value\rangle}` declares the key `/pgfgantt/\langle key\rangle` and stores its `\langle initial value\rangle`. `\@ggtt@keydef`

```

16 \def\@gantt@keydef#1#2{%
17   \pgfkeyssetvalue{/pgfgantt/#1}{#2}%
18 }

```

Secondly, `\ganttvalueof{<key>}` retrieves the value stored by a `<key>`. Link type `\ganttvalueof` authors should be able to use this macro in their code; thus, it lacks any `@`s.

```

19 \def\ganttvalueof#1{%
20   \pgfkeysvalueof{/pgfgantt/#1}%
21 }

```

Thirdly, `\@gtt@stylekeydef{<key>}{<initial style>}` declares a style `<key>` with an `\@gtt@stylekeydef` `<initial style>`.

```

22 \def\@gtt@stylekeydef#1#2{%
23   \pgfkeys{/pgfgantt/#1/.style={#2}}%
24 }

```

3.4 Option Declarations

`hgrid` checks whether its value is `false` and sets the boolean `\ifgantt@hgrid` accordingly. If the value is `true` or missing, horizontal grid lines appear dotted.

```

25 \@gtt@stylekeydef{hgrid style}{dotted}
26 \newif\ifgantt@hgrid
27 \ganttset{%
28   hgrid/.code={%
29     \def\@tempa{#1}%
30     \def\@tempb{false}%
31     \ifx\@tempa\@tempb%
32       \gantt@hgridfalse%
33     \else%
34       \gantt@hgridtrue%
35       \def\@tempb{true}%
36       \ifx\@tempa\@tempb%
37         \def\gantt@hgridstyle{dotted}%
38       \else%
39         \def\gantt@hgridstyle{#1}%
40       \fi%
41     \fi%
42   },%
43   hgrid/.default=dotted
44 }
45

```

`hgrid`
`hgrid style`
`\ifgantt@hgrid`
`\gantt@hgridstyle`

Analogously, we declare `vgrid`.

```

46 \newif\ifgantt@vgrid
47 \ganttset{%
48   vgrid/.code={%
49     \def\@tempa{#1}%
50     \def\@tempb{false}%

```

`vgrid`
`\ifgantt@vgrid`
`\gantt@vgridstyle`

```

51 \ifx\@tempa\@tempb%
52   \g@tt@vgridfalse%
53 \else%
54   \g@tt@vgridtrue%
55   \def\@tempb{true}%
56 \ifx\@tempa\@tempb%
57   \def\g@tt@vgridstyle{dotted}%
58 \else%
59   \def\g@tt@vgridstyle{\#1}%
60 \fi%
61 \fi%
62 }%
63 vgrid/.default=dotted
64 }
65

```

The following three keys store the basis vectors for the chart.

```

66 \g@tt@keydef{x unit}{.5cm}
67 \g@tt@keydef{y unit title}{1cm}
68 \g@tt@keydef{y unit chart}{1cm}
69

```

x	unit
y	unit title
y	unit chart

Here is a set of keys related to the canvas ...

```

70 \g@tt@stylekeydef{canvas}{fill=white}
71 \g@tt@keydef{today}{none}
72 \g@tt@stylekeydef{today rule}{dashed, line width=1pt}
73 \g@tt@keydef{today label}{TODAY}
74

```

canvas
today
today rule
today label

... and of keys that influence the title. Note that \g@tt@keydef cannot define title list options, since \g@tt@titlelistoptions is expanded after a \foreach statement, where \ganttvalueof will not work.

```

75 \g@tt@stylekeydef{title}{fill=white}
76 \g@tt@keydef{title label font}{\small}
77 \g@tt@stylekeydef{title label anchor}{anchor=mid}
78 \ganttset{%
79   title list options/.code={%
80     \def\g@tt@titlelistoptions{[\#1]}%
81   },%
82   title list options={var=\x, evaluate=\x}%
83 }
84 \g@tt@keydef{title left shift}{0}
85 \g@tt@keydef{title right shift}{0}
86 \g@tt@keydef{title top shift}{0}
87 \g@tt@keydef{title height}{.6}
88

```

title
title label font
title label anchor
title list options
title left shift
title right shift
title top shift
title height
\g@tt@titlelistoptions

include title in canvas is one of two boolean keys in the package.

include title in canvas
\ifg@tt@includetitle

```

89 \newif\ifgantt@includetitle
90 \ganttset{%
91   include title in canvas/.is if=gantt@includetitle,%
92   include title in canvas
93 }
94

```

The `name` key saves unique names for chart elements. The `time slot modifier` option controls the semi-intelligent behaviour of the package regarding the conversion of title slots to x -coordinates. A value of 0 essentially means “interpret all end time slots as x -coordinates”. The `inline` key moves labels close to their respective chart elements.

```

name
time slot modifier
inline
\ifgantt@inline

```

```

95 \@gantt@keydef{name}{}
96 \@gantt@keydef{time slot modifier}{-1}
97 \newif\ifgantt@inline
98 \ganttset{%
99   inline/.is if=gantt@inline,%
100  inline=false%
101 }
102

```

Some standard key declarations for bars ...

```

bar
bar label text
bar label font
bar label anchor
bar label inline anchor
bar left shift
bar right shift
bar top shift
bar height
\gantt@barlabeltext

```

```

103 \@gantt@stylekeydef{bar}{fill=white}
104 \ganttset{%
105   bar label text/.code={%
106     \def\gantt@barlabeltext##1{#1}%
107   },%
108   bar label text={\strut#1}%
109 }
110 \@gantt@keydef{bar label font}{\normalsize}
111 \@gantt@stylekeydef{bar label anchor}{anchor=east}
112 \@gantt@stylekeydef{bar label inline anchor}{anchor=center}
113 \@gantt@keydef{bar label shape anchor}{center}
114 \@gantt@keydef{bar left shift}{0}
115 \@gantt@keydef{bar right shift}{0}
116 \@gantt@keydef{bar top shift}{.3}
117 \@gantt@keydef{bar height}{.4}
118

```

... and groups.

```

group
group label text
group label font
group label anchor
group label inline anchor
group left shift
group right shift
group top shift
group height
\gantt@grouplabeltext

```

```

119 \@gantt@stylekeydef{group}{fill=black}
120 \ganttset{%
121   group label text/.code={%
122     \def\gantt@grouplabeltext##1{#1}%
123   },%
124   group label text={\strut#1}%
125 }
126 \@gantt@keydef{group label font}{\normalsize\bfseries}

```

```

127 \@gantt@stylekeydef{group label anchor}{anchor=east}
128 \@gantt@stylekeydef{group label inline anchor}{anchor=south}
129 \@gantt@keydef{group label shape anchor}{center}
130 \@gantt@keydef{group left shift}{-.1}
131 \@gantt@keydef{group right shift}{.1}
132 \@gantt@keydef{group top shift}{.4}
133 \@gantt@keydef{group height}{.2}

gantt left peak checks for each of its three values whether it is non-empty and
only then changes the corresponding length macro.                                group left peak
\gantt@groupleftpeakmidx
\gantt@groupleftpeakinnerx
\gantt@groupleftpeaky

134 \ganttset{%
135   group left peak/.code n args={3}{%
136     \def\@tempa{#1}%
137     \ifx\@tempa\@empty\else\def\gantt@groupleftpeakmidx{#1}\fi%
138     \def\@tempa{#2}%
139     \ifx\@tempa\@empty\else\def\gantt@groupleftpeakinnerx{#2}\fi%
140     \def\@tempa{#3}%
141     \ifx\@tempa\@empty\else\def\gantt@groupleftpeaky{#3}\fi%
142   }%
}

group right peak works similar, but a - also counts as an empty value (the reason
for this will soon become apparent).                                         group right peak
\gantt@grouprightpeakmidx
\gantt@grouprightpeakinnerx
\gantt@grouprightpeaky

143 group right peak/.code n args={3}{%
144   \def\@tempa{#1}%
145   \def\@tempb{-}%
146   \ifx\@tempa\@empty\else%
147     \ifx\@tempa\@tempb\else\def\gantt@grouprightpeakmidx{#1}\fi%
148     \fi%
149   \def\@tempa{#2}%
150   \ifx\@tempa\@empty\else%
151     \ifx\@tempa\@tempb\else\def\gantt@grouprightpeakinnerx{#2}\fi%
152     \fi%
153   \def\@tempa{#3}%
154   \ifx\@tempa\@empty\else\def\gantt@grouprightpeaky{#3}\fi%
155 }%
}

group peaks simultaneously sets group left peak and group right peak. In order
to preserve the symmetry of the peaks, the key adds a negative sign (i.e., a hyphen
in the source code) to  $\langle groove x \rangle$  and  $\langle inner x \rangle$  of group right peak. Therefore, the
latter key must interpret its first and second value as “empty” even if they contain a
single hyphen.                                                 group peaks

156 group peaks/.code n args={3}{%
157   \ganttset{%
158     group left peak={#1}{#2}{#3},%
159     group right peak={-#1}{-#2}{#3}%
160   }%
161 }%
162 group peaks=.2}{.4}{.1}

```

```
163 }
164
```

The keys below manage the progress elements. Note the way in which we declare `progress label text`, so that a `#1` in its value is replaced by the argument of `\gtt@progresslabeltext`.

```
165 \ganttset{%
166   progress/.code={%
167     \def\gtt@progress{\#1}%
168   },%
169   progress=none%
170 }
171 \@gtt@stylekeydef{bar incomplete}{}
172 \@gtt@stylekeydef{group incomplete}{}
173 \ganttset{%
174   incomplete/.style/.code={%
175     \ganttset{bar incomplete/.style=\#1, group incomplete/.style=\#1}%
176   },%
177   incomplete/.style={fill=black!25}
178 }
179 \ganttset{%
180   progress label text/.code={%
181     \def\gtt@progresslabeltext{\#1}%
182   },%
183   progress label text=\#1\% complete}
184 }
185 \@gtt@keydef{progress label font}{\scriptsize}
186 \@gtt@stylekeydef{progress label anchor}{anchor=west}
187
```

Here are the declarations of the milestone-related keys.

```
188 \@gtt@stylekeydef{milestone}{fill=black}
189 \ganttset{%
190   milestone label text/.code={%
191     \def\gtt@milestonelabeltext{\#1}%
192   },%
193   milestone label text=\strut\#1%
194 }
195 \@gtt@keydef{milestone label font}{\normalsize\itshape}
196 \@gtt@stylekeydef{milestone label anchor}{anchor=east}
197 \@gtt@stylekeydef{milestone label inline anchor}{anchor=south}
198 \@gtt@keydef{milestone label shape anchor}{center}
199 \@gtt@keydef{milestone width}{.8}
200 \@gtt@keydef{milestone height}{.4}
201 \@gtt@keydef{milestone xshift}{0}
202 \@gtt@keydef{milestone yshift}{.5}
203
```

Next, we declare the keys that modify links.

```
link
link type
link mid
link bulge
link tolerance
link label
link label font
link label anchor
```

```

204 \@g@tt@stylekeydef{link}{-latex, rounded corners=1pt}
205 \@g@tt@keydef{link type}{auto}
206 \@g@tt@keydef{link mid}{.5}
207 \@g@tt@keydef{link bulge}{.4}
208 \@g@tt@keydef{link tolerance}{.6}
209 \@g@tt@keydef{link label}{}
210 \@g@tt@keydef{link label font}{\scriptsize\itshape\normalcolor}
211 \@g@tt@stylekeydef{link label anchor}{anchor=west}
212

```

3.5 The Horizontal and Vertical Grid

The `\g@tt@vgrid@do` macro decomposes the style list for the vertical grid into its comma-separated items. The item is analyzed (see below) only if some grid lines are still left to draw. Note the “elegant” quadruple `\expandafter` construction, which enables tail recursion.

```

213 \def\g@tt@vgrid@do#1, {%
214   \ifx\relax#1\else%
215     \ifnum\value{g@tt@currgrid}>\value{g@tt@width}\else%
216       \g@tt@vgrid@analyze#1\relax%
217       \expandafter\expandafter\expandafter\g@tt@vgrid@do%
218       \expandafter\fi%
219   \fi%
220 }
221

```

In the absence of a star as the first token in a style list item, `\g@tt@vgrid@analyze` adds the multiplier 1 to the input stream.

```

222 \def\g@tt@vgrid@analyze{%
223   \@ifstar{\g@tt@vgrid@draw}{\g@tt@vgrid@draw1}%
224 }
225

```

`\g@tt@vgrid@draw` draws as many grid lines as required by the multiplier. It increases `g@tt@currgrid` after each line drawn and breaks the loop as soon as all grid rules have been drawn.

```

226 \def\g@tt@vgrid@draw#1#2\relax{%
227   \foreach \i in {1,...,#1} {%
228     \draw [#2]
229     (\value{g@tt@currgrid} * \ganttvalueof{x unit}, \y@upper pt) --%
230     (\value{g@tt@currgrid} * \ganttvalueof{x unit}, \y@lower pt);%
231     \stepcounter{g@tt@currgrid}%
232     \ifnum\value{g@tt@currgrid}>\value{g@tt@width}\breakforeach\fi%
233   }%
234 }
235

```

The corresponding macros for the horizontal grid work like their vertical grid analogues.

```

236 \def\gtt@hgrid@do#1{%
237   \ifx\relax#1\else
238     \ifnum\value{gtt@currgrid}<\value{gtt@currentline}\else%
239       \gtt@hgrid@analyze#1\relax%
240     \expandafter\expandafter\expandafter\gtt@hgrid@do%
241     \expandafter\fi%
242   \fi%
243 }
244
245 \def\gtt@hgrid@analyze{%
246   \@ifstar{\gtt@hgrid@draw}{\gtt@hgrid@draw1}%
247 }
248
249 \def\gtt@hgrid@draw#1#2\relax{%
250   \foreach \i in {1,...,#1} {%
251     \pgfmathsetmacro\y@upper{%
252       \value{gtt@lasttitleline} * \ganttvalueof{y unit title} +%
253       (\value{gtt@currgrid} - \value{gtt@lasttitleline})%
254       * \ganttvalueof{y unit chart}%
255     }%
256     \draw [#2]
257     (0pt, \y@upper pt) --
258     (\value{gtt@width} * \ganttvalueof{x unit}, \y@upper pt);%
259     \addtocounter{gtt@currgrid}{-1}%
260   \ifnum\value{gtt@currgrid}<\value{gtt@currentline}\breakforeach\fi%
261 }%
262 }
263

```

3.6 The Main Environment

If a `ganttchart` appears outside of a `tikzpicture`, we implicitly start this environment. “Within a `tikzpicture`” means that `\useasboundingbox` is defined.

At the beginning of a `ganttchart` environment, the keys in its optional argument are executed. `gtt@width` saves the environment’s mandatory argument (i.e., the number of time slots). All counters are set to 0. Since we expect a chart to start with at least one title element, `\ifgtt@intitle` is true. Within the environment, the control symbol `\`` is equivalent to `\ganttnewline` (similar to the syntax of a L^AT_EX table).

```

264 \newif\ifgtt@tikzpicture
265
266 \newenvironment{ganttchart}[2][]{%
267   \@ifundefined{useasboundingbox}{%
268     {\gtt@tikzpicturefalse\begin{tikzpicture}}{%
269      {\gtt@tikzpicturetrue}%

```

`ganttchart`
`\ifgtt@tikzpicture`
`\``

```

270 \ganttset{#1}%
271 \setcounter{gtt@width}{#2}%
272 \setcounter{gtt@currentline}{0}%
273 \setcounter{gtt@lasttitleline}{0}%
274 \setcounter{gtt@elementid}{0}%
275 \setcounter{gtt@currgrid}{1}%
276 \gtt@intitletrue%
277 \let\\\ganttnewline%
278 }{%

```

After the contents of the environment have been drawn, we add the canvas to the background layer. The `ganttchart` environment and all `\gantt...` macros save their x - and y -coordinates in local internal macros called `\x@left`, `\x@right`, `\y@upper` and `\y@lower`. The upper y -coordinate of the canvas is either zero or excludes the title lines if `include title in canvas` is false. The lower y -coordinate must take into account different y -units in the title and the rest of the chart.

```

\x@left
\x@right
\y@upper

329 }
330

```

3.7 Starting a New Line

Unless the optional argument of `\ganttnewline` is empty, this macro adds a horizontal grid rule between the current and the new line. The style of this line is either `hgrid style` or the style specified in the optional argument. Anyway, `\ganttnewline` decreases `gtt@currentline` and, if we are still in the title, `gtt@lasttitleline`. Since the new line starts at time slot zero, `gtt@lasttitleslot` is reset.

`\ganttnewline`

```

331 \newcommand\ganttnewline[1][]{%

351

```

3.8 Title Elements

`\ganttttitle` draws a title element (i. e., a rectangle with a single node at its center). `\ganttttitle` For reasons that will become clear below, the rectangle essentially starts at the x -coordinate stored in `gtt@lasttitleslot`. This counter is updated at the end of the macro.

Note that in order to keep key changes local, all macros that draw chart elements set the keys specified as their optional argument within a group.

```

352 \newcommand\ganttttitle[3] []{%
353   \begingroup%
354   \ganttset{#1}%
355   \pgfmathsetmacro\x@left{%
356     (\value{gtt@lasttitleslot} + \ganttvalueof{title left shift})%
357     * \ganttvalueof{x unit}%
358   }%
359   \pgfmathsetmacro\x@right{%

384   \expandafter\foreach\gantt@titlelistoptions in {#2} {\gantttitle{\x}{#3}}%
385   \endgroup%
386 }
387

```

3.9 Chart Elements

All chart elements that can be linked (i.e. bars, groups and milestones) add a node of shape `chart element`, whose name equals the value of the `name` key (or “`elem<number>`” if `name` is empty).

A `chart element` node is a rectangle with eleven anchors: One in the center of the chart element (`center`); six anchors at the top, middle and bottom of the element’s sides (`lower left` etc.); and four special anchors (`on left` etc.) that indicate a fractional coordinate between two corners of the shape. This fraction is stored in `\@gantt@linkanchorfraction`. The `\ganttlink` macro relies on these anchors for calculating the link coordinates.

Whenever a chart element node is created, the four macros `\x@left`, `\x@right`, `\y@upper` and `\y@lower` must expand to a number which represents a dimension in points (e.g., see section 3.10). Furthermore, if one calls the anchors `on left` etc., `\@gantt@linkanchorfraction` must contain a number between 0 and 1 (see section 3.11).

```

388 \pgfdeclareshape{chart element}{%
389   \savedanchor\lowerleft{%
390     \pgfpoint{\x@left pt}{\y@lower pt}%

3.10 Bars

`\ganttbar` first defines the usual coordinate macros and adds a `chart element` node. This node is called `elem<number>` if the `name` key is empty.

```

466 \newcommand{\ganttbar}[4] []{%
467   \begingroup%
468   \ganttset{#1}%
469   \pgfmathsetmacro\x@left{%
470     (#3 + \ganttvalueof{time slot modifier}%
471      + \ganttvalueof{bar left shift})%
472     * \ganttvalueof{x unit}%
473   }%
474   \pgfmathsetmacro\x@right{%
475     (#4 + \ganttvalueof{bar right shift}) * \ganttvalueof{x unit}%
476   }%
477   \pgfmathsetmacro\y@upper{%
478     \value{gtt@lasttitleline} * \ganttvalueof{y unit title}%
479     + (\value{gtt@currentline} - \value{gtt@lasttitleline}%
480     - \ganttvalueof{bar top shift}) * \ganttvalueof{y unit chart}%
481   }%
482   \pgfmathsetmacro\y@lower{%
483     \y@upper - \ganttvalueof{bar height} * \ganttvalueof{y unit chart}%
484   }%
485   \edef\gtt@name{\ganttvalueof{name}}%
486   \ifx\gtt@name\empty\edef\gtt@name{elem\the\gtt@elementid}\fi%
487   \node [shape=chart element] (\gtt@name)%
488     at ($(\x@left pt, \y@upper pt)! .5! (\x@right pt, \y@lower pt)$) {};

```

`\gtt@pl@draw` saves the commands that will produce the progress label. This macro does nothing unless (a) the `progress` key differs from `none` and (b) `progress label text` differs from `\relax`. Otherwise, it creates a vertically centered node to the right of the bar.

```

489 \def\@tempa{none}%
490 \ifx\gtt@progress\@tempa%

```

```

491 \def\gtt@progress{100}%
492 \let\gtt@pl@draw\relax%
493 \else
494   \expandafter\ifx\gtt@progresslabeltext\relax\relax%
495     \let\gtt@pl@draw\relax%
496   \else%
497     \def\gtt@pl@draw{%
498       \node at ($(\x@right pt, \y@upper pt)! .5 !
499         (\x@right pt, \y@lower pt)$)
500         [ /pgfgantt/progress label anchor] {%
501           \ganttvalueof{progress label font}{%
502             \gtt@progresslabeltext{\gtt@progress}%
503           }%
504         } ;%
505       }%
506     \fi%
507   \fi%

```

In order to draw the left (complete) and right (incomplete) part of a progress bar, we clip the corresponding rectangles depending on the value of `progress`. Note that we turn off the border of these rectangles and draw it with an additional, third command.

```

508 \begin{scope}%
509   \clip (\x@left pt, \y@upper pt) rectangle
510     ($(\x@left pt, \y@lower pt)! \gtt@progress/100!
511       (\x@right pt, \y@lower pt));%
512   \draw [ /pgfgantt/bar, draw=none] (\x@left pt, \y@upper pt)
513     rectangle (\x@right pt, \y@lower pt);%
514 \end{scope}%
515 \begin{scope}%
516   \clip ($(\x@left pt, \y@upper pt)! \gtt@progress/100!
517     (\x@right pt, \y@upper pt))
518   rectangle (\x@right pt, \y@lower pt);%
519   \draw [ /pgfgantt/bar incomplete, draw=none]
520     (\x@left pt, \y@upper pt) rectangle (\x@right pt, \y@lower pt);%
521 \end{scope}%
522 \draw [ /pgfgantt/bar, fill=none]
523   (\x@left pt, \y@upper pt) rectangle (\x@right pt, \y@lower pt);%
524 \gtt@pl@draw%

```

If the first mandatory argument of `\ganttnode` is not empty, we print a label. Its anchor is either at the `bar label shape anchor` of the previously defined `chart element node` (`inline=true`) or at the left canvas border halfway between the upper and lower *y*-coordinate of the bar (`inline=false`).

```

525 \def\@tempa{#2}%
526 \ifx\@tempa\@empty\else%
527   \ifgtt@inline%
528     \node at (\gtt@name.\ganttvalueof{bar label shape anchor})%

```

```

529      [/pgfgantt/bar label inline anchor]
530      {\ganttvalueof{bar label font}{\gantt@barlabeltext{\#2}}};%
531 \else%
532   \node at ($(0pt, \y@upper pt)!0.5!(0pt, \y@lower pt)$)
533     [/pgfgantt/bar label anchor]
534     {\ganttvalueof{bar label font}{\gantt@barlabeltext{\#2}}};%
535 \fi%
536 \fi%

```

Since the first bar clearly appears after the last line containing a title element, we set the boolean `\ifgantt@intitle` to false.

```

537 \xdef\gantt@lastelement{\gantt@currentelement}%
538 \xdef\gantt@currentelement{\gantt@name}%
539 \stepcounter{gantt@elementid}%
540 \global\gantt@intitlefalse%
541 \endgroup%
542 }
543

```

The shortcut version `\ganttlinkedbar` calls both `\ganttbar` and `\ganttlink`. [\ganttlinkedbar](#)

```

544 \newcommand\ganttlinkedbar[4] [] {%
545   \begingroup%
546   \ganttset{\#1}%
547   \ganttbar{\#2}{\#3}{\#4}%
548   \ganttlink{\gantt@lastelement}{\gantt@currentelement}%
549   \endgroup%
550 }
551

```

3.11 Links

`\newganttlinktype` stores the contents of its second argument in an internal macro [\newganttlinktype](#) of the form `\@gantt@linktype@{type}`, which is later called by `\gantt@drawlink`.

```

552 \newcommand\newganttlinktype[2]{%
553   \expandafter\def\csname @gantt@linktype@\#1\endcsname{\#2}%
554 }
555

```

`\newganttlinktypealias` copies both the link code and label of an existing link type (second argument) into the internal macros associated with a new link type (first argument). [\newganttlinktypealias](#)

```

556 \newcommand\newganttlinktypealias[2]{%
557   \expandafter\def\csname @gantt@linktype@\#1\endcsname{%
558     \cuse{@gantt@linktype@\#2}%
559   }%
560   \expandafter\def\csname @gantt@linktype@\#1@label\endcsname{%
561     \cuse{@gantt@linktype@\#2@label}%
562   }%

```

```

563 }
564
\setganttlinklabel stores a given label (second argument) in an internal macro of \setganttlinklabel
the form \@gantt@linktype@<type>@label, which is later used by \gantt@drawlink.

```

```

565 \newcommand{\setganttlinklabel}[2]{%
566   \expandafter\def\csname @gantt@linktype@#1@label\endcsname{#2}%
567 }
568

```

We define three link types for the automatic mode (`link type=auto`; in former versions of `pgfgantt`, these links were called arrow-like). Firstly, `r` (short for “right”) draws a straight arrow. Note that `r` and `default` are alias types.

```

569 \newganttlinktype{r}{%
570   \draw [/pgfgantt/link]
571     (\xLeft, \yUpper) --
572     (\xRight, \yLower)
573   node [pos=.5, /pgfgantt/link label anchor] {\ganttlinklabel};
574 }
575 \newganttlinktypealias{default}{r}
576

```

Secondly, `rdr` (“right-down-right”) is an unlabeled three-part arrow. The value of `link mid` sets the position of the middle segment.

```

577 \newganttlinktype{rdr}{%
578   \draw [/pgfgantt/link]
579     (\xLeft, \yUpper) --
580     ($(\xLeft, \yUpper)! \ganttvalueof{link mid}!
581      (\xRight, \yUpper)) --
582     ($(\xLeft, \yLower)! \ganttvalueof{link mid}!
583      (\xRight, \yLower)) --
584     (\xRight, \yLower);%
585 }
586

```

Thirdly, `rdldr` (“right-down-left-down-right”) is an unlabeled five-part arrow, which considers the values of `link bulge` and `link mid`.

```

587 \newganttlinktype{rdldr}{%
588   \draw [/pgfgantt/link]
589     (\xLeft, \yUpper) --
590     (\xLeft + \ganttvalueof{link bulge} * \ganttvalueof{x unit},
591      \yUpper) --
592     ($(\xLeft + \ganttvalueof{link bulge} * \ganttvalueof{x unit},
593      \yUpper) !%
594     \ganttvalueof{link mid}!%
595     (\xLeft + \ganttvalueof{link bulge} * \ganttvalueof{x unit},
596      \yLower)) --
597     ($(\xRight - \ganttvalueof{link bulge} * \ganttvalueof{x unit},

```

```

598     \yUpper) !%
599     \ganttvalueof{link mid} !%
600     (\xRight - \ganttvalueof{link bulge} * \ganttvalueof{x unit},
601     \yLower)$) --
602     (\xRight - \ganttvalueof{link bulge} * \ganttvalueof{x unit},
603     \yLower) --
604     (\xRight, \yLower);%
605 }
606

```

The dr type was explained in section 2.10.

```

607 \newganttlinktype{dr}{%

639   \ganttsetendanchor{on top=0}%
640   \draw [/pgfgantt/link]
641     (\xLeft, \yUpper) --
642     (\xRight, \yLower)

```

```

643     node [pos=.5, /pgfgantt/link label anchor] {\ganttlinklabel};
644 }
645 \setganttlinklabel{f-s}{finish-to-start}
646
647 \newganttlinktype{f-f}{%
648     \ganttsetstartanchor{on bottom=1}%
649     \ganttsetendanchor{on top=1}%
650     \draw [/pgfgantt/link]
651         (\xLeft, \yUpper) --
652         (\xRight, \yLower)
653     node [pos=.5, /pgfgantt/link label anchor] {\ganttlinklabel};
654 }
655 \setganttlinklabel{f-f}{finish-to-finish}
656

```

\gantt@drawlink first checks if the link type given as first argument is defined, falling back to the default type if it is unknown. \gantt@currlinktype stores the link type for future reference.

\gantt@drawlink
\gantt@currlinktype

```

657 \newcommand\gantt@drawlink[1]{%
658     \@ifundefined{@gantt@linktype@\#1}{%
659         \PackageWarning{pgfgantt}{Link type ‘\#1’ unknown, using ‘default’.}%
660         \def\@gantt@currlinktype{default}%
661     }{%
662         \def\@gantt@currlinktype{\#1}%
663     }%

```

If the link label key contains any value, it locally overrides the label set by \setganttlinklabel. \ganttlinklabel is defined accordingly, taking into account the link label font.

\@gantt@currlabel
\ganttlinklabel

```

664     \edef\@gantt@currlabel{\ganttvalueof{link label}}%
665     \ifx\@gantt@currlabel\@empty%
666         \def\ganttlinklabel{%
667             \ganttvalueof{link label font}{%
668                 \csname @gantt@linktype@\@gantt@currlinktype @label\endcsname%
669             }%
670         }%
671     \else%
672         \def\ganttlinklabel{%
673             \ganttvalueof{link label font}{%
674                 \@gantt@currlabel%
675             }%
676         }%
677     \fi%

```

Finally, we call the internal macro that stores the code for the desired link type.

```

678     \nameuse{@gantt@linktype@\@gantt@currlinktype}%
679 }
680

```

The internal macro `\@gantt@linkanchordef{<anchor>}` defines valid `<anchor>`s for `\ganttsetstartanchor` and `\ganttsetendanchor` (see below). For each `<anchor>`, a key `/pgfgantt/link anchor/<anchor>` is created, which stores its own name in `\@gantt@linkanchor` and its value in `\@gantt@linkanchorfraction`.

```

681 \def\@gantt@linkanchordef#1{%
682   \ganttset{%
683     link anchor/#1/.code={%
684       \def\@gantt@linkanchor{\#1}%
685       \def\@gantt@linkanchorfraction{\#\#1}%
686     },%
687     link anchor/#1/.default=.5%
688   }%
689 }
690 \@gantt@linkanchordef{on left}
691 \@gantt@linkanchordef{on right}
692 \@gantt@linkanchordef{on top}
693 \@gantt@linkanchordef{on bottom}
694 \@gantt@linkanchordef{lower left}
695 \@gantt@linkanchordef{left}
696 \@gantt@linkanchordef{upper left}
697 \@gantt@linkanchordef{lower right}
698 \@gantt@linkanchordef{right}
699 \@gantt@linkanchordef{upper right}
700

```

`\@gantt@setstartanchor` recalls the coordinates of the anchor `\@gantt@linkanchor` from chart element `\@gantt@startelement`. It stores the coordinates in the auxiliary macros `\xLeft` and `\yUpper`.

```

701 \newcommand\@gantt@setstartanchor[1]{%
702   \pgfqkeys{/pgfgantt/link anchor}{#1}%
703   \pgfpointanchor{\@gantt@startelement}{\@gantt@linkanchor}%
704   \edef\xLeft{\the\pgf@x}%
705   \edef\yUpper{\the\pgf@y}%
706 }
707

```

`\@gantt@setendanchor` is similar to the command above. However, it stores the anchor coordinates in the auxiliary macros `\xRight` and `\yLower`.

```

708 \newcommand\@gantt@setendanchor[1]{%
709   \pgfqkeys{/pgfgantt/link anchor}{#1}%
710   \pgfpointanchor{\@gantt@endelement}{\@gantt@linkanchor}%
711   \edef\xRight{\the\pgf@x}%
712   \edef\yLower{\the\pgf@y}%
713 }
714

```

`\ganttlink` first stores the names of the connected elements in `\@gantt@startelement` and `\@gantt@endelement`.

`\@gantt@linkanchordef`
`\@gantt@linkanchor`
`\@gantt@linkanchorfraction`

`\@gantt@setstartanchor`
`\xLeft`
`\yUpper`

`\@gantt@setendanchor`
`\xRight`
`\yLower`

`\ganttlink`
`\@gantt@startelement`
`\@gantt@endelement`

```

715 \newcommand\ganttlink[3] []{%
716   \begingroup%
717   \ganttset{#1}%
718   \def\@gtt@startelement{#2}%
719   \def\@gtt@endelement{#3}%

```

\ganttsetstartanchor and \ganttsetendanchor are only valid in the second argument of \newganttlinktype. Since you may wish to omit one of those commands, we set default anchors for the link.

```

720   \let\ganttsetstartanchor\@gtt@setstartanchor%
721   \let\ganttsetendanchor\@gtt@setendanchor%
722   \ganttsetstartanchor{right}%
723   \ganttsetendanchor{left}%

```

Automatic links: The first and last coordinate of the link should touch the preceding or following element at the center of its right or left border, respectively. We check if the connected elements lie in the same row or not (i. e., their y -coordinates differ at most 1 pt). In the latter case, \pgfmathparse yields 0.

```

724 \def\@tempa{auto}%
725 \edef\@tempb{\ganttvalueof{link type}}%
726 \ifx\@tempa\@tempb%
727   \pgfmathparse{abs(\yUpper - \yLower) <= 1}%
728   \ifcase\pgfmathresult%

```

Once again, two possibilities arise: Either the elements to be connected are at least separated by link tolerance time slots, in which case we draw a three-part arrow (i. e., link type **rdr**). Alternatively, the elements lie in adjacent time slots or even overlap, in which case we draw a five-part arrow (i. e., link type **rdldr**).

```

729 \pgfmathparse{%
730   (\xRight - \xLeft)
731   >= \ganttvalueof{link tolerance} * \ganttvalueof{x unit}
732 }%
733 \ifcase\pgfmathresult%
734   \gtt@drawlink{rdldr}%
735 \else%
736   \gtt@drawlink{rdr}%
737 \fi%

```

For elements that lie in the same row, we draw a simple arrow (i. e., link type **r**).

```

738 \else%
739   \gtt@drawlink{r}%
740 \fi%

```

Straight and custom links: We simply call \gtt@drawlink with the value of link type.

```

741 \else%
742   \gtt@drawlink{\ganttvalueof{link type}}%

```

```

743 \fi%
744 \endgroup%
745 }
746

```

3.12 Groups

Groups and bars are quite similar. First, we define the usual coordinate macros and `\ganttgroup`

```

747 \newcommand\ganttgroup[4] [] {%
748   \begingroup%
749   \ganttset{#1}%
750   \pgfmathsetmacro\x@left{%
751     (#3 + \ganttvalueof{time slot modifier}%
752      + \ganttvalueof{group left shift})%
753     * \ganttvalueof{x unit}%
754   }%
755   \pgfmathsetmacro\x@right{%
756     (#4 + \ganttvalueof{group right shift}) * \ganttvalueof{x unit}%
757   }%
758   \pgfmathsetmacro\y@upper{%
759     \value{gtt@lasttitleline} * \ganttvalueof{y unit title}%
760     + (\value{gtt@currentline} - \value{gtt@lasttitleline}%
761     - \ganttvalueof{group top shift}) * \ganttvalueof{y unit chart}%
762   }%
763   \pgfmathsetmacro\y@lower{%
764     \y@upper - \ganttvalueof{group height} * \ganttvalueof{y unit chart}%
765   }%
766   \edef\gtt@name{\ganttvalueof{name}}%
767   \ifx\gtt@name\empty\edef\gtt@name{\the\gtt@elementid}\fi%
768   \node [shape=chart element] (\gtt@name)
769     at ($(\x@left pt, \y@upper pt)!5!(\x@right pt, \y@lower pt)$) {};

```

`\gtt@pl@draw` saves the commands that will produce the progress label. This macro does nothing unless (a) the `progress` key differs from `none` and (b) `progress label text` differs from `\relax`. Otherwise, it creates a vertically centered node to the right of the group.

```

770 \def\@tempa{none}%
771 \ifx\gtt@progress\@tempa%
772   \def\gtt@progress{100}%
773   \let\gtt@pl@draw\relax%
774 \else
775   \expandafter\ifx\gtt@progresslabeltext\relax\relax%
776     \let\gtt@pl@draw\relax%
777   \else%
778     \def\gtt@pl@draw{%
779       \node at ($(\x@right pt, \y@upper pt)!5!
780         (\x@right pt, \y@lower pt)$)

```

```

781      [/pgfgantt/progress label anchor] {%
782          \ganttvalueof{progress label font}{%
783              \gtt@progresslabeltext{\gtt@progress}%
784          }%
785      }%;%
786  }%;%
787  \fi%
788 \fi%

```

In order to draw the left (complete) and right (incomplete) part of a progress group, we clip the corresponding polygons depending on the value of `progress`. Note that we turn off the border of these polygons and draw it with an additional, third command. The clipped area must include the highest peak, so we determine its height and store it in `\@maxpeak`.

```

789 \pgfmathsetmacro{\@maxpeak}{%
790   \gtt@grouprightpeaky > \gtt@groupleftpeaky ?%
791   \gtt@grouprightpeaky * \ganttvalueof{y unit chart} :%

5 Change History

v1.0	
General: Initial release	1
v1.1	
General: bar label text configures the text of a bar label.	16
group label text configures the text of a group label.	20
link tolerance decides whether a five- or a three-part link is drawn.	28
milestone label text configures the text of a milestone label.	25
The time slot modifier key has been added. If set to zero, all x-coordinates are interpreted as given, without regarding them as time slots.	15
The vgrid lines list key determines the number of vertical grid lines drawn.	7
The introduction clarifies what I mean by “a current PGF installation”.	2
v2.0	
General: Added style lists for the horizontal and vertical grid.	5
Completely rewrote the calculation of coordinates.	5

Removed the <code>hgrid shift</code> and <code>last line height</code> keys.	7
Removed the <code>vgrid lines</code> list key, as its behaviour can be simulated by an appropriate <code><style list></code> for <code>vgrid</code> .	7
Removed the <code>vgrid style</code> key.	5
The <code>x unit</code> , <code>y unit title</code> and <code>y unit chart</code> keys specify the width of time slots and the height of title or chart lines, respectively. Thus, one can draw titles whose height differs from the rest of the chart. Furthermore, the <i>x</i> - and <i>y</i> -dimensions of the chart are independent of the dimensions of the surrounding <code>tikzpicture</code> .	5
<code>\ganttlink</code> : The syntax of <code>\ganttlink</code> was completely changed. The command now takes one optional and <i>two</i> mandatory arguments. The latter specify the name of the chart elements to be linked. Consequently, the keys <code>b-b</code> , <code>b-m</code> , <code>m-b</code> and <code>m-m</code> were removed. The keys <code>s-s</code> , <code>s-f</code> , <code>f-s</code> and <code>f-f</code> are now values for the <code>link type</code> key.	59
<code>\ganttnewline</code> : The optional argument of <code>\ganttnewline</code> now also accepts a style.	49
v2.1	
General: Added three keys (<code>bar/group/milestone label inline anchor</code>) for placing inline labels.	16
The <code>ganttchart</code> environment may be used outside a <code>tikzpicture</code> .	4
The <code>inline</code> key moves labels close to their respective chart elements.	16
v3.0	
<code>\@gantt@keydef</code> : <code>\@gantt@keydef</code> and <code>\@gantt@stylekeydef</code> have been rewritten to support <code>pgfkey</code> 's abilities to store key values.	40
General: All style keys (<code>canvas</code> , <code>bar</code> etc.) only support the common TikZ style key syntax.	4
Completely rewrote the code for links (again). Definition of new link types is now possible (via <code>\newganttlinktype</code> and <code>\newganttlinktypealias</code>).	28
New auxiliary macros for <code>\newganttlinkstyle</code> : <code>\xLeft</code> , <code>\xRight</code> , <code>\yUpper</code> , <code>\yLower</code> , <code>\ganttsetstartanchor</code> , <code>\ganttsetendanchor</code> and <code>\ganttlinklabel</code> .	30
The <code>bar/group/milestone label shape anchor</code> keys allow for a fine-tuned placement of chart element labels.	20
The <code>chart</code> element shape supports four additional anchors (<code>on left</code> , <code>on top</code> , <code>on right</code> and <code>on bottom</code>).	51
<code>\ganttvalueof</code> : <code>\@gantt@get</code> has been renamed to <code>\ganttvalueof</code> to provide a convenient access for link type authors.	41
<code>\setganttlinklabel</code> : <code>\setganttlinklabel</code> specifies the label for all links of a certain type. The <code>link label</code> key locally overrides any label set by this command.	56
