## Using LuaLTEX to typeset RTL text with reledpar

## Abstract

This file provides an example on how to use reledpar and Lual $^{4}$ TeX to typeset a right to left text with its translation on the facing page $^{1}$ .

As you can see, the switch to RTL convention is made before the pstart. It must be also called inside **\elebelledsection**.

For an example with XTLATEX, look at parallel-column-two-languages. tex file.

<sup>&</sup>lt;sup>1</sup>The text was provided by Latechneuse on http://tex.stackexchange.com/q/227837/7712.

English headline Some english text.
