

Parallel typesetting for critical editions: the `reledpar` package*

Maïeul Rouquette[†]based on the original `ledpar` by Peter Wilson
Herries Press[‡]

Abstract

The `reledmac` package has been used for some time for typesetting critical editions. The `reledpar` package is an extension to `reledmac` which enables texts and their critical apparatus to be typeset in parallel, either in two columns or on pairs of facing pages.

`reledpar` provides many tools and options. Normally, they are all documented in this file. Also provided is a help folder, “examples”. The folder contains additional examples (although not for all cases). Examples starting by “3-” are for basic uses, those starting by “4-” are for advanced uses.

To report bugs, please go to ledmac’s GitHub page and click “New Issue”: <https://github.com/maieul/ledmac/issues/>. You must open an account with github.com to access my page (maieul/ledmac). GitHub accounts are free for open-source users. You can report bug in English or in French (better).

You can subscribe to the `reledmac` email list in:
<http://geekographie.maieul.net/146>

1 Introduction

1.1 Aim of this package

Some critical editions contain texts in more than one form, such as a set of verses in one language and their translations in another. In such cases there is a desire to be able to typeset the two texts, together with any critical apparatus, in parallel. The `reledpar` package is an extension to `reledmac` that enables two texts and their apparatus to be set in parallel, either in two columns or on pairs of facing pages.

The package has to try and coerce `TEX` into paths it was not designed for. Use of the package, therefore, may produce some surprising results. In this case, please reports them to the author via github's issues: <https://github.com/maieul/ledmac/issues/>.

This manual contains a general description of how to use `reledpar` starting in section 3; the complete source code for the package, with extensive documentation (in sections I through XXV); and an Index to the source code. As `reledpar` is an adjunct to `reledmac` we assume that you have read the `reledmac` manual. Also `reledpar` requires `reledmac` to be used, in the version distributed with version.

You do not need to read the source code for this package in order to use it but doing so may help to answer any questions you might have. The documentation's sections are numbered in roman numeral.

On a first reading, We suggest that you should skip anything after the general documentation in first sections until I, unless you are particularly interested in the innards of `reledpar`.

1.2 Historical overview

Many of the code of this package is based on the `eledpar` package, which was based on the `ledpar`, created as an extension of the `ledmac` package.

Names of the package related to parallel typesetting have moved in parallel of names of the package related to critical edition.

Please read `reledmac`'s handbook in order to understand this evolution.

2 Options

The package can be loaded with a number of global options which are listed here. Those options are fully described in the paragraphs devoted to their feature.

2.1 Synchronization's options

Please read the paragraph on synchronization's option on 5.2.2 p. 10 to understand better those options.

shiftedpstarts prevents white space between paragraphs on facing pages, the white space necessary to sync pages is collected at the bottom of the page instead.

advancedshiftedpstarts does the same as `shiftedpstarts`, but the pstart shift are not counted to determine when cutting the page. That could help to avoid page with blank lines at the bottom.

nomaxlines allows facing pages to have different numbers of lines.

nosyncpstarts disables syncing on facing pages. In that case the pages are filled as two streams normal.

2.2 Other options

parledgroup allows the use of `ledgroup` environment with `reledpar`.¹

widthliketwocolumns set the width of the text printed in a single column to be the same as the width of the text printed in two parallel columns with `reledpar`. This is useful when alternating between normal and parallel typesetting.²

sameparallelpagENUMBER sets page numbers on facing pages to the same value.

prevpgnotnumbered enables that the page before facing pages (the one automatically inserted to start parallel pages on a left page) is not counted. This applies only if the page is empty.

3 General

A file may mix *numbered* and *unnumbered* text. Numbered text is printed with marginal line numbers and can include footnotes and endnotes that are referenced to those line numbers: this is how you will want to print the text that you are editing. Unnumbered

¹This option can either be used on `reledmac` or `reledpar`.

²This option can either be used on `reledmac` or `reledpar`.

text is not printed with line numbers, and you can't use `reledmac`'s note commands with it: this is appropriate for introductions and other material added by the editor around the edited text.

The `reledpar` package lets you typeset two *numbered* texts in parallel³. This can be done either as setting the 'Leftside' and 'Rightside' texts in two columns or on facing pages. In the paired pages case footnotes are placed at the bottom of the page on which they are called out — that is, footnotes belonging to the left are set at the foot of a left (even numbered) page, and those for right texts are at the bottom of the relevant right (odd numbered) page. However, in the columnar case, all footnotes are set at the bottom left of the page on which they are called out — they are not set below the relevant column. The line numbering schemes need not be the same for the two texts.

`reledmac` essentially puts each chunk of numbered text (the text within a `\pstart ... \pend`) into a box and then following the `\pend` extracts the text line by line from the box to number and print it. More precisely, the text is first put into the the box as though it was being typeset as normal onto a page and any notes are stored without being typeset. Then each typeset line is extracted from the box and any notes for that line are recalled. The line, with any notes, is then output for printing, possibly with a line number attached. Effectively, all the text is typeset and then afterwards all the notes are typeset.

`reledpar` similarly puts the left and right chunks into boxes but can't immediately output the text after a `\pend` — it has to wait until after both the left and right texts have been collected before it can start processing. This means that several boxes are required and possibly `TEX` has to store a lot of text in its memory; both the number of potential boxes and memory are limited. If `TEX`'s memory is overfilled the recourse is to reduce the amount of text stored before printing.

`\maxchunks` It is possible to have multiple chunks in the left and right texts before printing them. The macro `\maxchunks{<num>}` specifies the maximum number of chunks within the left or right texts. This is initially set as:

`\maxchunks{5120}`

meaning that there can be up to 5120 chunks in the left text and up to 5120 chunks in the right text, requiring a total of 10240 boxes. If you need more chunks then you can increase `\maxchunks`. The `\maxchunks` must be called in the preamble.

If you `\maxchunks` is too little you can get a `reledpar` error message along the lines: "Too many `\pstart` without printing. Some text will be lost." then you will have to either increase `\maxchunks` or use the parallel printing commands (`\Columns` or `\Pages`) more frequently.

When typesetting verse using `\stanza`, each line is treated as a chunk, so be warned that if you are setting parallel verses you might have to increase `\maxchunks` much more than it appears at first sight.

In general, `reledmac` is a `TEX` resource hog, and `reledpar` only makes things worse in this respect.

³You can use, anyway, `\numberlinefalse` to disable printing of line numbers.

4 Parallel columns

4.1 Basic use

`pairs` Numbered text that is to be set in columns must be within a `pairs` environment. Within the environment the text for the lefthand and righthand columns is placed within the `Leftside` and `Rightside` environments, respectively; these are described in more detail below in section 6.

`\Columns` The command `\Columns` typesets the texts in the previous pair of `Leftside` and `Rightside` environments. The general scheme for parallel columns looks like this:

```
\begin{pairs}
\begin{Leftside} ... \end{Leftside}
\begin{Rightside} ... \end{Rightside}
\end{pairs}
\Columns
\begin{pairs}
\begin{Leftside} ... \end{Leftside}
...
\end{pairs}
\Columns
```

`\AtBeginPairs` Keep in mind that the `\Columns` **must be** outside of the `pairs` environment. You can use the macro `\AtBeginPairs` to insert a code at the beginning of each `pairs` environments. That could be useful to add the `\sloppy` macro to prevent overfull hboxes in two columns.

```
\AtBeginPairs{\sloppy}
```

There is no required pagebreak before or after the columns.

4.2 Setting

4.2.1 Column's width

`\Lcolwidth` `\Rcolwidth` The lengths `\Lcolwidth` and `\Rcolwidth` are the widths of the left and right columns, respectively. By default, these are:

```
\setlength{\Lcolwidth}{0.45\textwidth}
\setlength{\Rcolwidth}{0.45\textwidth}
```

They may be adjusted if one text tends to be ‘bulkier’ than the other.

4.2.2 Column's separator

`\columnrulewidth` `\columnseparator` The macro `\columnseparator` is called between each left/right pair of lines. By default it inserts a vertical rule of width `\columnrulewidth`. As this is initially defined to be 0pt the rule is invisible. For a visible rule between the columns you could try:

```
\setlength{\columnrulewidth}{0.4pt}
```

You can also modify `\columnseparator` if you want more control.

4.2.3 Column's positions

`\columnsposition`

By default, columns are positioned to the right of the page. However, you can use `\columnsposition{L}` to align them to the left, or `\columnsposition{C}` to center them.

When you use `\stanza`, the visible rule may shift when a verse has a hanging indent. To prevent shifting, use `\setstanzaindent`s outside the `Leftside` or `Rightside` environment.

`\beforecolumnseparator`
`\aftercolumnseparator`

By default, the spaces around column separator are the same as the space:

- On the left of columns, if columns are aligned right.
- On the right of columns, if columns are aligned left.
- On both the left and right columns, if columns are centered.

You can redefine `\beforecolumnseparator` and `\aftercolumnseparator` length to define spaces before or after the column separator, instead of letting `reledpar` calculate them automatically.

```
\setlength{\beforecolumnseparator}{length}
\setlength{\aftercolumnseparator}{length}
```

If you want to revert to the previous behavior, just set with a negative value.

4.2.4 Mixing two columns and one column texts

`\widthliketwocolumns`

If you want to mix two-column with single-column text, you can align horizontally single-column text to two-column text with `\widthliketwocolumnstrue`. To reset this feature, use `\widthliketwocolumnsfalse`. You can also call `\widthliketwocolumns` as a global option when loading `reledmac` or `reledpar`.

`\noteswidthliketwocolumns`
`\notesXwidthliketwocolumns`

In most cases, you should use `\widthliketwocolumns` in combination with `\noteswidthliketwocolumns` and `\notesXwidthliketwocolumns` to align the critical/familiar footnotes with the two columns. See `reledmac`'s handbook for more details.

5 Facing pages

5.1 Basic usage

`\Pages`

Numbered text that is to be set on facing pages must be within a `pages` environment. Within the environment the text for the lefthand and righthand pages is placed within the `Leftside` and `Rightside` environments, respectively.

`\Pages`

The command `\Pages` typesets the texts in the previous pair of `Leftside` and `Rightside` environments. The general scheme for parallel pages looks like this:

```
\begin{pages}
\begin{Leftside} ... \end{Leftside}
\begin{Rightside} ... \end{Rightside}
```

```
\begin{Leftside} ... \end{Leftside}
...
\end{pages}
\Pages
```

The `Leftside` text is set on lefthand (even numbered) pages and the `Rightside` text is set on righthand (odd numbered) pages. Each `\Pages` command starts a new even numbered page. After parallel typesetting is finished, a new page is started. Note that the `\Pages` **must be** outside of the `pages` environment.

5.2 Setting

5.2.1 Text width

`\Lcolwidth` `\Rcolwidth` Within the `pages` environment the lengths `\Lcolwidth` and `\Rcolwidth` are the widths of the left and right pages, respectively. By default, these are set to the normal `textwidth` for the document, but can be changed within the environment if necessary.

5.2.2 Way of synchronizing⁴

Synchronization of left and right texts in parallel processing requires some ‘numbered’ auxiliary files to be written (namely `.1`, `.1R`, `.2`, `.2R`, and so forth), the content of which may change as long as synchronization is not complete. This usually requires LaTeX to be run several times. Therefore, it is advised to use in conjunction utilities such as `latexmk` to ensure that synchronization is complete.

Numbered paragraphs which are contained between the `\pstart` and `\pend` macros are thereafter called ‘chunks’.

In short, the default setting is designed in such a way that corresponding chunks of text are always kept in synchronization, even at the cost of page padding, as it may result in leaving blank lines between chunks of text. Conversely, using in conjunction `advancedshiftedpstarts` and `nomaxlines` settings ensures that pages are filled with text to full advantage—at the cost of the chunks not being kept in synchronization—and every chunk starts on the facing page of its corresponding chunk.

To understand better how each of the synchronization settings of `reledpar` works, one must first understand how the default setting of `reledpar` synchronizes the left and right chunks.

The aim of the default setting is twofold:

- To ensure that left pages contain what is to be on left sides and that right pages contain what is to be on right sides.
- To ensure that every chunk starts on the page that is facing its corresponding chunk.

As regards the latter, `reledpar` checks that both of the following rules are respected:

⁴There is a French version of this article on <http://geekographie.maieul.net/185>.

- The numbers of lines of every pair of chunks must be identical. To keep this rule, `reledpar` may insert some blank lines at the bottom of the chunk that is shorter so that it may eventually have the same number of lines as the one that is longer.
- The main content of two facing pages, apart from critical and familiar footnotes, must have the same numbers of lines, including those that may be blank. Consequently, if one left page contains more notes than the corresponding right page, the bottom of the right page must be left blank.

Each of these rules can be modified by a number of optional synchronization settings in `reledpar`:

1. Regarding the number of lines a pair of chunks may have:
 - (a) 'shiftedpstarts' setting merely moves any added blank lines from the bottom of the chunks to the bottom of the page. It does not allow to have more lines on a given page as it just removes the blank lines between the chunks and does nothing more. To understand better how this work, you may compare the total amounts of lines of text on a given page whether you have activated this setting or not: you will see that both amounts are the same.
 - (b) 'advancedshiftedpstarts' prevents any blank lines from being inserted at the bottom of the chunks, also taking them away from the total amount of lines the page may have. This allows to get more lines on the pages. However, please note that:
 - Blank lines are taken into account as `reledpar` moves from one to the following chunk of text, so that every pair of chunks may always start on the same facing pages.
 - Consequently, blank lines continue to be taken into account in the calculation of the amount of lines a given pair of pages may have. This is why when a longer chunk runs from one page to another the shorter corresponding one also runs across pages, even if this may result in some blank vertical space being left on the first page.
2. As regards the number of lines per page, including blank ones, the `nomaxlines` setting disregards the rule that forces two facing pages to have the same numbers of lines. So it allows to have more text on the pages. Then, by a complex mechanism it is ensured that two corresponding chunks may always start on the same facing pages, provided that `shiftedpstarts` or `advancedshiftedpstarts` settings shall not be activated.

Lastly, one may disregard all of the synchronization rules and content himself with parallel texts typesetting. To achieve this, please use the `nosyncpstarts` setting.

Please note that every change of synchronization setting resets the content of the 'numbered' auxiliary files to make sure that `reledpar` does not try to make the synchronization with wrong calculations.

5.2.3 Page number

By default, \Pages use the standard L^AT_EX page number scheme. This means that pages are numbered continuously following printed-book conventions: from left-hand to right-hand side, left-hand pages having even numbers, right-hand pages having odd numbers.

However, you can use the package option `samemultipagepagenumbers` to have the same page number for both left and right side. In this case, this setting will apply only for pages typeset by \Pages, not for “normal” pages.

Please also read advising in 11 p. 19.

5.2.4 Page breaking

\setgoalfraction

When doing parallel pages `reledpar` has to guess where T_EX is going to put pagebreaks and hopefully get there first in order to put the pair of texts on their proper pages. When it thinks that the fraction \@goalfraction of a page has been filled, it finishes that page and starts on the other side’s text. The standard value is 0.9.

If you think you can get more on a page, increase this. On the other hand, if some left text overflows onto an odd numbered page or some right text onto an even page, try reducing it. You can change it using `\setgoalfraction{<newvalue>}`.

5.2.5 Right page before \Pages

When \Pages are called, it starts at a new left page, in order to have parallel pages. Consequently, if it is called on a left page, it clears the current page and then lets a right void page.

`reledpar` provides two options to customize this (eventual) right page.

`prevpgstyle=<style>` in order to set the style of this page. A common value of `<style>` is empty. Use `prevpgstyle=empty` will suppress header and footer in this page.
Please also read advising in 11 p. 19.

`prevpgnotnumbered` will make this page won’t be counted in the page counter.

5.2.6 Notes about \mainmatter

If you use \frontmatter, do not use \mainmatter directly before \Pages because it could create spurious empty pages.

Use instead \pages with the optional argument [mainmatter]. In this case, the content of \Pages will start on a left side, without any spurious empty page, and the left pages will be odd (and not even like in normal way), the first one being 1.

5.3 Critical and familiar footnotes

Of course, in “Facing pages”, the `reledmac`’s both critical and familiar footnotes can be used. However, some specific points must be taken into consideration.

5.3.1 Notes height setting

Since `eledpar` v1.13.0, long notes in facing pages can flow from left to right pages, and *vice-versa*.

However, the `reledmac` default setting for the maximum allotted size to notes is greater than `\textheight`. That makes impossible for long notes to flow across pages.⁵ We have not changed this default setting, because we do not want to break compatibility with older version of `reledmac` and we want to be as close as possible to default \LaTeX 's feature.

So, you MUST change the default setting via `\Xmaxhnotes` (for critical notes) and `\maxhnotesX` (for familiar notes). Both commands are explained in `reledmac` handbook (6.10.4 p. 38). As an advisable setting:

```
\Xmaxhnotes{0.6\textheight}
\maxhnotesX{0.6\textheight}
```

5.3.2 Notes for one side only

`\Xonlyside` You may want to typeset notes on one side only (either left or right). Use `\Xonlyside[⟨s⟩]{⟨p⟩}` to set critical notes, and `\onlysideX[⟨s⟩]{⟨p⟩}` to set familiar notes. `⟨p⟩` must be set to L for notes to be confined only on the left side and to R for notes to be confined only on the right side.

5.3.3 Familiar notes called in the right side, but to be printed in the left side

`\footnoteXnomk` As often happens, the left side has less room for text. We may want to call familiar notes in the right side while using at the same time the available space in the left side to print them.

To achieve this, we call `\footnoteXnomk{⟨notecontent⟩}` in the left side. X is to be replaced by the series letter. We do this call in the left side after the word which matches up to the one in the right side after which we want to insert the actual footnote mark.

In the right side, we call `\footnoteXmk` at the place we want to have the footnote mark. X is to be replaced by the series letter. For example:

```
\begin{Leftside}
\begin{numbering}
\pstart
A little cat\footnoteAnomk{A note.}. And so one ...
\pend
\end{numbering}
\end{Leftside}
\begin{Rightside}
\begin{numbering}
\pstart
Un petit chat\footnotemk. And so one ...
\pend
\end{numbering}
\end{Rightside}
```

⁵The same applies to \LaTeX normal notes. Read <http://tex.stackexchange.com/a/228283/7712> for technical informations.

```
\pend
\endnumbering
\end{Rightside}
```

6 Left and right texts

6.1 Environments

Parallel texts are divided into Leftside and Rightside. The form of the contents of these two are independent of whether they will be set in columns or pages.

`Leftside`
`Rightside`

The left text is put within the `Leftside` environment and the right text likewise in the `Rightside` environment. The number of `Leftside` and `Rightside` environments must be the same.

6.2 Numbering text lines and paragraphs

`\begin{numbering}`
`\end{numbering}`

Each section of numbered text must be preceded by `\begin{numbering}` and followed by `\end{numbering}`, like:

```
\begin{numbering}
<text>
\end{numbering}
```

These have to be separately specified within `Leftside` and `Rightside` environments.

The `\begin{numbering}` macro resets the line number to zero, reads an auxiliary file called `<jobname>.nn` (where `<jobname>` is the name of the main input file for this job, and `nn` is 1 for the first numbered section, 2 for the second section, and so on), and then creates a new version of this auxiliary file to collect information during this run. Separate auxiliary files are maintained for right hand texts and these are named `<jobname>.nnR`, using the 'R' to distinguish them from the left hand and serial (non-parallel) texts.

`\memorydump`

The command `\memorydump` effectively performs an `\end{numbering}` immediately followed by a `\begin{numbering}` while not restarting the numbering sequence. This has the effect of clearing TeX's memory of previous texts and any associated notes, allowing longer apparent streams of parallel texts. The command should be applied to both left and right texts, and after making sure that all previous notes have been output. For example, along the lines of:

```
\begin{pages}
\begin{Leftside}
\begin{numbering}
...
\end{Leftside}
\begin{Rightside}
\begin{numbering}
...
\end{Rightside}
\end{pages}
```

```
\Pages
\begin{pages}
\begin{Leftside}
\memorydump
...
\end{Leftside}
\begin{Rightside}
\memorydump
...
\end{pages}
```

It is possible to insert a number at every \pstart command. You must use the \numberpstarttrue command to have it. You can stop the numbering with \numberpstartfalse. You can redefine the commands \thepstartL and \thepstartR to change style. The numbering restarts on each \beginnumbering.

The command \skipnumbering when inserted in a line of parallel text causes the numbering of that particular line to be skipped. This can be useful if you are putting some kind of marker (even if it is only a blank line) between stanzas. Remember, parallel texts must be numbered and this provides a way to slip in an “unnumbered” line. When inserted into a numbered line the macro \hidenumbering causes the number for that particular line to be hidden; namely, no line number will print. Note that if you use it in \stanza, you must call it at the beginning of the verse.

6.3 Line numbering scheme

Within these environments you can designate the line numbering scheme(s) to be used.

6.4 Lineation system

Following \firstlinenum{\<num>} the first line number will be *<num>*, and following \linenumincrement{\<num>} only every *<num>*th line will have a printed number. Using these macros inside the Leftside and Rightside environments gives you independent control over the left and right numbering schemes. The \firstsublinenum and \sublinenumincrement macros correspondingly set the numbering scheme for sub-lines. Generally speaking, controls like \firstlinenum or \linenummargin apply to sequential and left texts. To effect right texts only, they have to be within a Rightside environment.

The starred versions change both left and right numbering schemes.

The suffixed version changes the right side, without regard to the position they are called.

\lineationR macro is the equivalent of reledmac \lineation macro for the right side.

\lineation* macro is the equivalent of reledmac \lineation macro for both sides.

\linenumberstyleR is the equivalent of reledmac \linenumberstyle for right text. \sublinenumberstyleR is the equivalent of reledmac \sublinenumberstyle

```
\firstlinenum
\linenumincrement
\firstsublinenum
\sublinenumincrement
\firstlinenum*
\linenumincrement*
\firstsublinenum*
\sublinenumincrement*
\firstlinenumR
\linenumincrementR
\firstsublinenumR
\sublinenumincrementR
\lineationR
\lineation*
\linenumberstyleR
\sublinenumberstyleR
\linenumberstyle*
\sublinenumberstyle*
```

`\setRlineflag` right text. The starred version are for both side. A “R” is appended to the line numbers of the right texts. This may be useful for parallel columns but for parallel pages it might be more appropriate to redefine it using `\setRlineflag{<flag>}`. Use `\setRlineflag{}` to empty it.

6.5 Chunks

`\pstart` In a serial (non-parallel) mode, each numbered paragraph, or chunk, is contained between the `\pstart` and `\pend` macros, and the paragraph is output when the `\pend` macro occurs. The situation is somewhat different with parallel typesetting as the left text (contained within `\pstart` and `\pend` groups within the `Leftside` environment) has to be set in parallel with the right text (contained within its own `\pstart` and `\pend` groups within the corresponding `Rightside` environment) the `\pend` macros cannot immediately initiate any typesetting – this has to be controlled by the `\Columns` or `\Pages` macros. Several chunks may be specified within a `Leftside` or `Rightside` environment. A multi-chunk text then looks like:

```
\begin{...side}
% \beginnumbering
\pstart first chunk \pend
\pstart second chunk \pend
...
\pstart last chunk \pend
% \endnumbering
\end{...side}
```

Numbering, via `\beginnumbering` and `\endnumbering`, may extend across several `Leftside` or `Rightside` environments. Remember, though, that the left/right sides are effectively independent of each other.

`\autopar` The `\autopar` macro can be used, instead of manually inserting `\pstart... \pends`. Please read `reledmac`'s handbook (4.2.2 p. 15).

6.6 \AtEveryPstart and \AtEveryPstartCall

In general, remember that the moment where a `\pstart` is called is different from the moment when the `\pstart... \pend` content is printed, which is when `\Pages` or `\Columns` is processed.

Consequently:

- The argument of `\AtEveryPstart` (see 4.2.4 p. 16) is called before every chunk is printed, except if you used an optional argument for the `\pstart`.
- The argument of `\AtEveryPstartCall` is called before every `\pstart`.

6.7 Language setting

If you are using the `babel` package or the `polyglossia` package ,with different languages (via, say, `\selectlanguage`) for the left and right texts it is particularly impor-

tant to select the appropriate language within the `Leftside` and `Rightside` environments. The initial language selected for the right text is the `babel` package's default. Also, it is the *last* language setting in a side that controls the language used in any notes for that side when they get printed. If you are using multilingual notes then it is probably safest to explicitly specify the language(s) for each note rather than relying on the language selection for the side. The right side language is also applied to the right side line numbers.

7 Verse

If you are typesetting verses with `reledmac` you can use the `\stanza` construct, and you can also use this in right or left parallel texts. In this case each verse line is a chunk which has two implications. (1) you can unexpectedly exceed the `\maxchunks` limit or the overall limit on the number of boxes, and (2) left and right verse lines are matched, which may not be desirable if one side requires more print lines for verse lines than the other does.

astanza `reledpar` provides an `astanza` environment which you can use instead of `\stanza`. A `astanza` environment is a chunk. Consequently left and right `verse` are matched, and not, as with standard `\stanza`, left and right `verse lines`.

Within the `astanza` environment each verse line is treated as an individual paragraph, so there must be no blank lines in the environment otherwise there will be some extraneous vertical spacing. To use `astanza`, simply replace `\stanza` by `\begin{astanza}` and add `\end{astanza}` after the ending `\&`.

The difference between `astanza` and `\stanza` is, that the letter syncs verse by verse, while the enviornment syncs stanza by stanza.

If you get an error message along the lines of 'Missing number, treated as zero `\sza@0@`' it is because you have forgotten to use `\setstanzaindents` to set the stanza indents.

As `astanza` is a specify type `\pstart... \pend` structure, you can:

- Add optional argument (in brackets) after `\begin{astanza}`, as the optional argument of `\pstart`.
- Use optional argument after the last `\&` as optional argument of `\pend`.

\sethangingsymbol Like in `reledmac`, you could use the `\sethangingsymbol` command to insert a character in each hanging line. If you use it, you must run `LATEX` two time. Example for the French typography

```
\sethangingsymbol{\,}
```

You can also use it to force hanging verse to be flush right:

```
\sethangingsymbol{\protect\hfill}
```

When you use `\lednopp` make sure to use it on both sides in the corresponding verses to keep the pages in sync.

\thestanzaL
\thestanzaR

When using \stanzanumtrue (8.9 p. 42) in parallel typesetting, stanza counter is replaced by stanzaL counter in left side and by stanzaR counter in right side. Consequently, you can redefine \thestanzaL and \thestanzaR to change their aspect.

8 Side notes

As in reledmac, you must use one of the following commands to add side notes: \ledsidenote, \ledleftnote, \ledrightnote, \ledouterote, \ledinnerrote.

The \sidenotemargin defines the margin of the sidenote for either left or right side, depending on the current environment. You can use \sidenotemargin* to define it for both sides.

9 Parallel ledgroups

9.1 General

You can also make parallel ledgroups (see the documentation of reledmac about ledgroups, 9 p. 43). To do it you have:

- To load reledpar package with the parledgroup option, or to add \parledgrouptrue.
- To push each ledgroup between \pstart...\pend command.

See the following example:

```
\begin{pages}
\begin{Leftside}
\begin{numbering}
\pstart
\begin{ledgroup}
ledgroup content
\end{ledgroup}
\pend
\pstart
\begin{ledgroup}
ledgroup content
\end{ledgroup}
\pend
\end{numbering}
\end{Leftside}
\begin{Rightside}
\begin{numbering}
\pstart
\begin{ledgroup}
ledgroup content
\end{ledgroup}
\pend
\pstart

```

```
\begin{ledgroup}
  ledgroup content
\end{ledgroup}
\pend
\endnumbering
\end{Rightside}
\end{pages}
\Pages
```

9.2 Parallel ledgroups and setspace package

If you use the `setspace` package and want your notes in parallel ledgroups to be single-spaced (not half-spaced or double-spaced), just add to your preamble:

```
\setparledgroupnotespacing{\singespacing}
```

In effect, to have correct spacing, do not change the font size of your notes.

10 Sectioning commands

The standard sectioning commands of `reledmac` are available, and provide parallel sectioning, for both two-column and two-page layout.

`\uledsectnotoc`

By default, the section commands of the right side are not added to the table of contents. But you can change it, using `\uledsectnotoc{\langle arg \rangle}`, where `\langle arg \rangle` could be L (for left side) or R (for right side).

`\uledsectmark`

By default, the headers are tokens from the left side. You can change them, using `\uledsectmark{\langle arg \rangle}`, where `\langle arg \rangle` could be L (for left side) or R (for right side).

11 Notes about page number

If you use `sameparallelpagernumber` option (5.2.3 p. 12 or `prevpgnotnumbered` option (5.2.5 p. 12), please read the following paragraph if you want to manipulate page numbers manually.

In order to implement these two options, `reledpar` uses its own page counter, called `par@page`. Consequently, if you use at least one of these options:

1. If you modify `\thepage` command, use the value of `par@page` counter inside and not the value of `page` counter.
2. If you want to modify a page number, modify the value of `page` counter AND the value `par@page` counter.

Notes that `reledpar` automatically do it when you use `\frontmatter` and `\mainmatter` commands.

I Implementation overview

\TeX is designed to process a single stream of text, which may include footnotes, tables, and so on. It just keeps converting its input into a stream typeset pages. It was not designed for typesetting two texts in parallel, where it has to alternate from one to the other. Further, \TeX essentially processes its input one paragraph at a time — it is very difficult to get at the ‘internals’ of a paragraph such as the individual lines in case you want to number them or put some mark at the start or end of the lines.

`reledmac` solves the problem of line numbering by putting the paragraph in typeset form into a box, and then extracting the lines one by one from the box for \TeX to put them onto the page with the appropriate page breaks. Most of the `reledmac` code is concerned with handling this box and its contents.

`reledpar`’s solution to the problem of parallel texts is to put the two texts into separate boxes, and then appropriately extract the pairs of lines from the boxes. This involves duplicating much of the original box code for an extra right text box. The other, smaller, part of the code is concerned with coordinating the line extractions from the boxes.

II Preliminaries

II.1 Package’s meta-data

Announce the name and version of the package, which is targeted for \LaTeXe . The package also requires the `reledmac` package, however we do not load it automatically, because we prefer users to know it.

```

1 %<*code>
2 \NeedsTeXFormat{LaTeX2e}
3 \ProvidesPackage{reledpar}[2015/09/29 v2.4.0 reledmac extension for
parallel texts]%
4 %
5 %

```

II.2 Package’s requirement

Few commands use `\xspace` command.

```

6 \RequirePackage{xspace}%
7 %

```

II.3 Package’s options

We use `xkeyval` in order to manage options with arguments.

```

8 \RequirePackage{xkeyval}%
9 %

```

II.4 Package's options

II.4.1 Synchronization's options

\@par@this@sync@option The \par@sync@option stores the options of synchronization. It use to ensure these options do not change between two run.

```
10 \def\@par@this@sync@option{}%
11 %
```

With the option ‘shiftedpstarts’ a long pstart on the left side (or on the right side) does not make a blank on the corresponding pstart, but the blank is put on the bottom of the page. Consequently, the pstarts on the parallel pages are shifted, but the shift stops at every end of pages.

```
\ifshiftedpstarts12 \newif\ifshiftedpstarts
13 \DeclareOptionX{shiftedpstarts}{%
14   \shiftedpstartstrue%
15   \apptocmd{\@par@this@sync@option}{shifted}{}{}%
16 }%
17 %
```

With the option ‘advancedshiftedpstarts’ a long pstart on the left side (or on the right side) does not make a blank on the corresponding pstart, but the blank is put on the bottom of the page. Consequently, the pstarts on the parallel pages are shifted, but the shift stops at every end of pages. Differing to shiftedpstarts, the pstart shift are not counted to determine when cutting the page. That could help to avoid page with blank lines at the bottom.

```
\ifshiftedpstarts18 \newif\ifadvancedshiftedpstarts
19 \DeclareOptionX{advancedshiftedpstarts}{%
20   \advancedshiftedpstartstrue%
21   \shiftedpstartstrue%
22   \apptocmd{\@par@this@sync@option}{advancedshifted}{}{}%
23 }%
24 %
```

With the option nomaxlines, reledpar allows facing pages to have not the same number of lines.

```
\ifnomaxlines25 \newif\ifnomaxlines%
26 \DeclareOptionX{nomaxlines}{%
27   \nomaxlinestrue%
28   \apptocmd{\@par@this@sync@option}{nomax}{}{}%
29 }%
30 %
```

With the option nosyncpstarts, reledpar only alternate between left and right side, and does not try to obtain the same number of line in corresponding page.

```

\ifnosyncpstarts31 \newif\ifnosyncpstarts%
32 \DeclareOptionX{nosyncpstarts}{%
33   \shiftedpstartstrue%
34   \nomaxlinestrue%
35   \nosyncpstartstrue%
36   \apptocmd{\@par@this@sync@option}{nosync}{}{%
37 }%
38 %

```

II.4.2 Other options

The `parledgroup` can be called either on `reledmac` or `reledpar`.

```

39 \DeclareOptionX{parledgroup}{\parledgrouptrue}
40 %

```

`\ifwidthliketwocolumns` The `widthliketwocolumns` option can be called either on `reledmac` or `reledpar`.

```

41 \DeclareOptionX{widthliketwocolumns}{\widthliketwocolumnstrue}%
42 %

```

`\ifsameparallelpagenumber` Options related to page numbering

```

\ifprevpgnotnumbered
43 \newif\ifsameparallelpagenumber
44 \newif\ifprevpgnotnumbered
45 \DeclareOptionX{sameparallelpagenumber}{\sameparallelpagenumbertrue}
46 \DeclareOptionX{prevpgnotnumbered}{\prevpgnotnumberedtrue}
47 %

```

`\prevpgstyle` We store on `\prevpgstyle` the argument of the option `prevpgstyle`.

```

48 \DeclareOptionX{prevpgstyle}{\gdef\prevpgstyle{\#1}}%
49 %

```

```

50 \ProcessOptionsX%
51 %

```

II.5 Determining side and category of parallel processing

As noted above, much of the code is a duplication of the original `reledmac` code to handle the extra box(es) for the right hand side text, and sometimes for the left hand side as well. In order to distinguish we use ‘R’ or ‘L’ in the names of macros for the right and left code. The specifics of ‘L’ and ‘R’ are normally hidden from the user by letting the `Leftside` and `Rightside` environments set things up appropriately.

`\ifl@dpairing` `\ifl@dpairing` is set TRUE if we are processing parallel texts and `\ifl@dpaging` is also set TRUE if we are doing parallel pages. `\ifledRcol` is set TRUE if we are doing the right hand text. They are defined in `reledmac`.

II.6 Text's width

```
\Lcolwidth The widths of the left and right parallel columns (or pages).
\Rcolwidth
52 \newdimen\Lcolwidth
53   \Lcolwidth=0.45\textwidth
54 \newdimen\Rcolwidth
55   \Rcolwidth=0.45\textwidth
56 %
```

II.7 Messages

All the error and warning messages are collected here as macros.

```
\reledpar@error57 \newcommand{\reledpar@error}[2]{\PackageError{reledpar}{#1}{#2}}
58 %
```

```
\reledpar@warning59 \newcommand{\reledpar@warning}[1]{\PackageWarning{reledpar}{#1}}%
60 %
```

```
\led@err@TooManyPstarts61 \newcommand*{\led@err@TooManyPstarts}{%
62   \reledpar@error{Too many \string\pstart\space without printing.
63   Some text will be lost}{\@ehc}}
64 %
```

```
d@err@BadLeftRightPstarts65 \newcommand*{\led@err@BadLeftRightPstarts}[2]{%
66   \reledpar@error{The numbers of left (#1) and right (#2)
67   \string\pstart s do not match}{\@ehc}}
68 %
```

```
\led@err@LeftOnRightPage69 \newcommand*{\led@err@LeftOnRightPage}{%
\led@err@RightOnLeftPage70 \reledpar@error{The left page has ended on a right page}{\@ehc}}
71 \newcommand*{\led@err@RightOnLeftPage}{%
72   \reledpar@error{The right page has ended on a left page}{\@ehc}}
73 %
```

```
htside@PreviousNotPrinted74 \newcommand*{\led@err@Leftside@PreviousNotPrinted}{%
htside@PreviousNotPrinted75 \reledpar@error{You call a new Leftside environment while the previous
one has not been typeset by \string\Pages\space or \string\Columns}{\@ehc}}
76 \newcommand*{\led@err@Rightside@PreviousNotPrinted}{%
77   \reledpar@error{You call a new Rightside environment while the previous
one has not been typeset by \string\Pages\space or \string\Columns}{\@ehc}}
78 %
```

```

\led@err@Pages@InsideEnv79 \newcommand{\led@err@Pages@InsideEnv}{%
\led@err@Columns@InsideEnv80   \reledpar@error{\string\Pages\space must be called *outside* of the `%
                                         pages` environment}{\@ehc}%
\newcommand{\led@err@Columns@InsideEnv}{%
\reledpar@error{\string\Columns\space must be called *outside* of the `%
                                         pairs` environment}{\@ehc}%
%

}%
}%
%
\led@error@fail@patch@@memnum92 \newcommand{\led@error@fail@patch@@memnum}{%
                                         \reledpar@error{Fail to patch \string\@memnum\space command.}{\@ehc}%
}%
%
\led@error@fail@patch@@outputpage96 \newcommand{\led@error@fail@patch@@outputpage}{%
                                         \reledpar@error{Fail to patch \string\@outputpage\space command.}{\@ehc}%
}%
%
\led@warn@ChangeSyncOption100 \newcommand{\led@warn@ChangeSyncOption}[1]{%
                                         \reledpar@warning{You have changed synchronization's options since last%
                                         run. We have not read line-list file #1. Please run LaTeX again.}%
}%
%

```

III Sectioning commands

`\section@numR` This is the right side equivalent of `\section@num`.

Each section will read and write an associated ‘line-list file’, containing information used to do the numbering. Normally the file will be called `<jobname>.nn`, where `nn` is the section number. However, for right side texts the file is called `<jobname>.nnR`. The `\extensionchars` applies to the right side files just as it does to the normal files.

```

104 \newcount\section@numR
105   \section@numR=\z@
106 %

```

\ifpst@rtdL \ifpst@rtdL is set FALSE at the start of left side numbering, and similarly for \ifpst@rtdR \ifpst@rtdR. \ifpst@rtdL is defined in reledmac.

```

107 \pst@rtdLfalse
108 \newif\ifpst@rtdR
109 %
110 %

```

\beginnumberingR This is the right text equivalent of \beginnumbering, and begins a section of numbered text.

```

111 \newcommand*{\beginnumberingR}{%
112   \ifnumberingR
113     \led@err@NumberingStarted
114     \endnumberingR

IV Line counting

IV.1 Setting lineation reset

Sometimes you want line numbers that start at 1 at the top of each page; sometimes you want line numbers that start at 1 at each `\pstart`; other times you want line numbers that start at 1 at the start of each section and increase regardless of page breaks. `reledpar` lets you choose different schemes for the left and right texts.

`\lineationR` `\lineationR{<word>}` is the macro used to select the lineation system for right texts. Its argument is a string: either `page`, `pstart` or `section`.

```

221 \newcommand*{\lineationR}[1]{%
222   \ifnumbering
223     \led@err@LineationInNumbered
224   \else
225     \def\@tempa{#1}\def\@tempb{page}%
226     \ifx\@tempa\@tempb
227       \global\bypage@Rtrue
228       \global\bypstart@Rfalse
229       \unless\ifnocritical@%
230         \Xpstart[] [false]%
231       \fi%
232     \else
233       \def\@tempb{pstart}%
234       \ifx\@tempa\@tempb
235         \global\bypage@Rfalse
236         \global\bypstart@Rtrue
237         \unless\ifnocritical@%
238           \Xpstart%
239         \fi%
240       \else
241         \def\@tempb{section}
242         \ifx\@tempa\@tempb
243           \global\bypage@Rfalse%
244           \global\bypstart@Rfalse%
245           \unless\ifnocritical@%
246             \Xpstart[] [false]%
247           \fi%
248         \else
249           \led@warn@BadLineation

252     \fi
253   \fi}%
254 %

```

`\lineation*` `\lineation*` change the lineation system for both sides.

```

255 \WithSuffix\newcommand\lineation*[1]{%

```

```

256   \lineation{#1}%
257   \lineationR{#1}%
258 }%
259 %

```

IV.2 Setting line number margin

\linenummargin \line@marginR You call \linenummargin{\langle word\rangle} to specify which margin you want your right text's line numbers in; it takes one argument, a string. You can put the line numbers in the same margin on every page using left or right; or you can use inner or outer to get them in the inner or outer margins. You can change this within a numbered section, but the change may not take effect just when you would like; if it is done between paragraphs nothing surprising should happen.

For right texts the selection is recorded in the count \line@marginR, otherwise in the count \line@margin: 0 for left, 1 for right, 2 for outer, and 3 for inner.

It is defined only once time, in reledmac.

```

260 \newcount\line@marginR
261 %

```

By default put right text numbers at the right.

```

262 \line@marginR=\@ne
263 %
264 %

```

IV.3 Setting lineation start and step

\c@firstlinenumR \c@linenumincrementR The following counters tell reledmac which right text lines should be printed with line numbers. firstlinenumR is the number of the first line in each section that gets a number; linenumincrementR is the difference between successive numbered lines. The initial values of these counters produce labels on lines 5, 10, 15, etc. linenumincrementR must be at least 1.

```

265 \newcounter{firstlinenumR}
266   \setcounter{firstlinenumR}{5}
267 \newcounter{linenumincrementR}
268   \setcounter{linenumincrementR}{5}
269 %

```

\c@firstsublinenumR \c@sublinenumincrementR The following parameters are just like firstlinenumR and linenumincrementR, but for sub-line numbers. sublinenumincrementR must be at least 1.

```

270 \newcounter{firstsublinenumR}
271   \setcounter{firstsublinenumR}{5}
272 \newcounter{sublinenumincrementR}
273   \setcounter{sublinenumincrementR}{5}
274 %
275 %

```

```

\firstlinenum These are the user's macros for changing (sub) line numbers. They are defined in
\linenumincrement reledmac. The starred versions are specific to elepar.

\firstsublinenum276 \WithSuffix\newcommand\firstlinenum*[1]{%
\sublinenumincrement277 \setcounter{firstlinenumR}{#1}%
\firstlinenum*278 \setcounter{firstlinenum}{#1}%
\linenumincrement*279 }

\firstsublinenum*280 \WithSuffix\newcommand\linenumincrement*[1]{%
\sublinenumincrement*281 \setcounter{linenumincrementR}{#1}%
\setcounter{linenumincrement}{#1}%
282 }
283 \WithSuffix\newcommand\firstsublinenum*[1]{%
284 \setcounter{subfirstlinenumR}{#1}%
285 \setcounter{subfirstlinenum}{#1}%
286 }
287 \WithSuffix\newcommand\sublinenumincrement*[1]{%
288 \setcounter{sublinenumincrementR}{#1}%
289 \setcounter{sublinenumincrement}{#1}%
290 }
291 %
292 %

```

```

\firstlinenumR And the 'R' suffixed version.

\linenumincrementR293 \newcommand\firstlinenumR[1]{%
\firstsublinenumR294 \setcounter{firstlinenumR}{#1}%
\sublinenumincrementR295 }

\newcommand\linenumincrementR[1]{%
\setcounter{linenumincrementR}{#1}%
}

\newcommand\firstsublinenumR[1]{%
\setcounter{subfirstlinenumR}{#1}%
}

\newcommand\sublinenumincrementR[1]{%
\setcounter{sublinenumincrementR}{#1}%
}

```

IV.4 Setting line flag

\Rlineflag This is appended to the line numbers of right text.

```

306 \newcommand{\setRlineflag}[1]{%
307 \gdef\@Rlineflag{#1}%
308 }
309 \setRlineflag{R}
310 %

```

IV.5 Setting line number style

\linenumrepR \linenumrepR{*ctr*} typesets the right line number (*ctr*), and similarly \sublinenumrepR for subline numbers.

```
311 \newcommand*{\linenumrepR}[1]{\@arabic{#1}}
312 \newcommand*{\sublinenumrepR}[1]{\@arabic{#1}}
313 %
314 %
```

\linenumberstyleR The style can be changed by some user level command
\sublinenumberstyleR

```
315 \newcommand*{\linenumberstyleR}[1]{%
316   \def\linenumrepR##1{\@nameuse{@##1}{##1}}}
317 \newcommand*{\sublinenumberstyleR}[1]{%
318   \def\sublinenumrepR##1{\@nameuse{@##1}{##1}}}
319 %
```

\linenumberstyle* And for both side.
\sublinenumberstyle*

```
320 \WithSuffix\newcommand\linenumberstyle*[1]{%
321   \linenumberstyle{#1}%
322   \linenumberstyleR{#1}%
323 }%
324 %
325 \WithSuffix\newcommand\sublinenumberstyle*[1]{%
326   \sublinenumberstyle{#1}%
327   \sublinenumberstyleR{#1}%
328 }%
329 %
330 %
```

IV.6 Print marginal line number

\leftlinenumR \leftlinenumR and \rightlinenumR are the macros that are called to print the right text's marginal line numbers. Much of the code for these is common and is maintained in \l@dlinenumR.

```
331 \newcommand*{\leftlinenumR}{%
332   \l@dlinenumR
333   \kern\linenumsep}
334 \newcommand*{\rightlinenumR}{%
335   \kern\linenumsep
336   \l@dlinenumR}
337 \newcommand*{\l@dlinenumR}{%
338   \numlabfont\linenumrepR{\line@numR}\@Rlineflag%
339   \ifsublines@%
340     \ifnum\subline@num>z@
341       \unskip\fullstop\sublinenumrepR{\subline@numR}%
342   \fi}
```

```

343 \fi}
344 %
345 %

```

IV.7 Line-number counters and lists

IV.7.1 Correspond to those in `reledmac` for regular or left text

We need another set of counters and lists for the right text, corresponding to those in `reledpar` for regular or left text.

`\line@numR`
`\subline@numR`
`\absline@numR`

The count `\line@numR` stores the line number that is used in the right text's marginal line numbering and in notes. The count `\subline@numR` stores a sub-line number that qualifies `\line@numR`. The count `\absline@numR` stores the absolute number of lines since the start of the right text section: that is, the number we have actually printed, no matter what numbers we attached to them.

```

346 \newcount\line@numR
347 \newcount\subline@numR
348 \newcount\absline@numR
349 %
350 %

```

`\line@listR` Now we can define the list macros that will be created from the line-list file. They are directly analogous to the left text ones. The full list of action codes and their meanings is given in the `reledmac` manual.
`\insertlines@listR`
`\actionlines@listR`

`\actions@listR` Here are the commands to create these lists:

```

351 \list@create{\line@listR}
352 \list@create{\insertlines@listR}
353 \list@create{\actionlines@listR}
354 \list@create{\actions@listR}
355 %
356 %

```

`\page@numR` The right text page number.

```

357 \newcount\page@numR
358 %
359 %

```

IV.7.2 Specific to `reledpar`

`\linesinpar@listL`
`\linesinpar@listR`
`\maxlinesinpar@list`

In order to synchronise left and right chunks in parallel processing we need to know how many lines are in each left and right text chunk, and the maximum of these for each pair of chunks.

```

360 \list@create{\linesinpar@listL}
361 \list@create{\linesinpar@listR}
362 \list@create{\maxlinesinpar@list}
363 %
364 %

```

IV.8 Reading the line-list file

\list@clearing@regR \Clear the right lines for \read@linelist

```

365 \newcommand{\list@clearing@regR}{%
366   \list@clear{\line@listR}%
367   \list@clear{\insertlines@listR}%
368   \list@clear{\actionlines@listR}%
369   \list@clear{\actions@listR}%
370   \list@clear{\linesinpar@listR}%
371   \list@clear{\linesonpage@listR}
372 }
373 %

```

\@par@sync@option When typesetting parallel pages, \@par@sync@option check if we have changed the synchronization's option since the last run. If true, we just not read the numbered file.

```

374 \newcommand{\@par@sync@option}[1]{%
375   \IfStrEq{#1}{\@par@this@sync@option}%
376   {}%
377   {\@ifledRcol%
378     \led@warn@ChangeSyncOption{\jobname.\extensionchars\the\section@num}%
379   }%
380   \else%
381     \led@warn@ChangeSyncOption{\jobname.\extensionchars\the\section@num}%
382   \fi%
383   \endinput%
384 }%
385 %

```

\read@linelist \read@linelist{\<file>} is the control sequence that is called by \beginnumbering (via \line@list@stuff) to open and process a line-list file; its argument is the name of the file. . It is defined only once time in reledmac.

IV.9 Commands within the line-list file

This section defines the commands that can appear within a line-list file, except for \@lab which is in a later section among the cross-referencing commands it is associated with.

The macros with *action* in their names contain all the code that modifies the action-code list.

\@nl@regR \@nl@regR is called by \@nl if we are on a right side. It does everything related to the start of a new line of numbered text on a right side.

```

386 \newcommand{\@nl@regR}{%
387   \ifx\l@dchset@num\relax \else
388     \advance\absline@numR \cne
389     \set@line@action
390     \let\l@dchset@num\relax
391     \advance\absline@numR \m@cne
392     \advance\line@numR \m@cne% % do we need this?
393   \fi
394   \advance\absline@numR \cne
395   \ifx\next@page@numR\relax \else
396     \page@action
397     \let\next@page@numR\relax
398   \fi
399   \ifx\sub@change\relax \else
400     \ifnum\sub@change>\z@%
401       \sublines@true
402     \else
403       \sublines@false
404     \fi
405     \sub@action
406     \let\sub@change\relax
407   \fi
408   \ifcase\@lockR
409   \or
410     \@clockR \tw@%
411   \or\or
412     \@clockR \z@%
413   \fi
414   \ifcase\sub@lockR
415   \or
416     \sub@lockR \tw@%
417   \or\or
418     \sub@lockR \z@%
419   \fi
420   \ifsublines@
421     \ifnum\sub@lockR<\tw@%
422       \advance\subline@numR \cne
423     \fi
424   \else
425     \ifnum\@lockR<\tw@%
426       \advance\line@numR \cne \subline@numR \z@%
427     \fi
428   \fi}
429
430 %
431 %

```

\last@page@numR \last@page@numR store the page number of the last right page. It is modified by \fix@page \fix@page, defined by `reledmac`.

```
432 \newcount\last@page@numR
433     \last@page@numR=-10000
434
435 %
```

\@adv The \@adv{\(num)} macro advances the current visible line number by the amount specified as its argument. This is used to implement \advanceline. It is defined in `reledmac`.

\@set The \@set{\(num)} macro sets the current visible line number to the value specified as its argument. This is used to implement \setline. It is defined in `reledmac`.

\l@d@set The \l@d@set{\(num)} macro sets the line number for the next \pstart... to the value specified as its argument. This is used to implement \setlinenum. It is defined in `reledmac`.

\page@action \page@action adds an entry to the action-code list to change the page number. It is defined in `reledmac`.

\set@line@action \set@line@action adds an entry to the action-code list to change the visible line number. It is defined in `reledmac`.

\sub@action \sub@action adds an entry to the action-code list to turn sub-lineation on or off, according to the current value of the \ifsublines@ flag. It is defined in `reledmac`.

\do@clockon \lock@on adds an entry to the action-code list to turn line number locking on. The current setting of the sub-lineation flag tells us whether this applies to line numbers or sub-line numbers. It is defined in `reledmac`, however the code specific to right side is defined here, in \do@clockonR.

```
436 \newcount\@clockR
437 \newcount\sub@clockR
438
439 \newcommand*\do@clockonR{%
440     \xright@appenditem{\the\absline@numR}\to\actionlines@listR

480 \fi}
481 %
482 %
483 %

```

\n@num

\@ref \@ref marks the start of a passage, for creation of a footnote reference. It takes two arguments:
 \insert@countR

- #1, the number of entries to add to \insertlines@list for this reference. This value for right text, here and within \edtext, which computes it and writes it to the line-list file, will be stored in the count \insert@countR.

```

484 \newcount\insert@countR
485 %

```

- #2, a sequence of other line-list-file commands, executed to determine the ending line-number. This may also include other \eref commands, corresponding to uses of \edtext within the first argument of another instance of \edtext.

\eref itself is defined in `reledmac`. It calls \ref@reg or \ref@regR, depending whether we are in left or right side. Here, we define only \ref@regR, \ref@reg is already defined in `reledmac`.

The first thing \ref@regR itself does is to add the specified number of items to the \insertlines@listR list.

```

486 \newcommand*{\eref@regR}[2]{%
487   \global\advance\edtext@level by 1%
488   \global\insert@countR=#1\relax
489   \loop\ifnum\insert@countR>\z@
490     \xright@appenditem{\the\absline@numR}\to\insertlines@listR
491     \global\advance\insert@countR \m@ne
492   \repeat
493 %

```

Next, process the second argument to determine the page and line numbers for the end of this lemma. We temporarily equate \eref to a different macro that just executes its argument, so that nested \eref commands are just skipped this time. Some other macros need to be temporarily redefined to suppress their action.

```

494 \begingroup
495   \let\eref=\dummy@ref
496   \let\@opR\gobble
497   \let\page@action=\relax
498   \let\sub@action=\relax
499   \let\set@line@action=\relax
500   \let\@lab=\relax
501   \let\@lemma=\relax
502   \let\@sw\gobblethree%
503   #2
504   \global\endpage@num=\page@numR
505   \global\endline@num=\line@numR
506   \global\endsubline@num=\subline@numR
507 \endgroup
508 %

```

Now store all the information about the location of the lemma's start and end in \line@listR.

```

509   \xright@appenditem%
510   {\the\page@numR|\the\line@numR|%
511    \ifsublines@ \the\subline@numR \else 0\fi|%

568   \xrightappenditem{\#1}\to\linesonpage@listR}
569 %
570 %

```

IV.10 Writing to the line-list file

We have now defined all the counters, lists, and commands involved in reading the line-list file at the start of a section. Now we will cover the commands that `reledmac` uses within the text of a section to write commands out to the line-list.

\linenum@outR The file for right texts will be opened on output stream \linenum@outR.

```

571 \newwrite\linenum@outR
572 %

```

\iffirst@linenum@out@R Once any file is opened on this stream, we keep it open forever, or else switch to another file that we keep open.
\first@linenum@out@Rtrue
\first@linenum@out@Rfalse

```

573 \newif\iffirst@linenum@out@R
574   \first@linenum@out@Rtrue
575 %

```

- \line@list@stuffR** This is the right text version of the `\line@list@stuff{<file>}` macro. It is called by `\beginnumberingR` and performs all the line-list operations needed at the start of a section. Its argument is the name of the line-list file.

```

576 \newcommand*{\line@list@stuffR}[1]{%
577   \read@linelist{#1}%
578   \iffirst@linenum@out@R
579     \immediate\closeout\linenum@outR
580     \global\first@linenum@out@Rfalse
581     \immediate\openout\linenum@outR=\#1
582     \immediate\write\linenum@outR{\string\line@list@version{%
583       this@line@list@version}}%
584     \ifl@dpaging%
585       \immediate\write\linenum@outR{\string\@par@sync@option{%
586         @par@this@sync@option}}%
587     \fi%
588   \else
589     \if@minipage%
590       \leavevmode%
591     \fi%
592     \closeout\linenum@outR%
593     \openout\linenum@outR=\#1%
594   \fi}
595 %

```

- \new@lineL** The `\new@lineL` macro sends the `\@nl` command to the left text line-list file, to mark the start of a new text line.

```

595 \newcommand*{\new@lineL}{%
596   \write\linenum@out{\string\@nl[\the\c@page] [\thepage]}}
597 %

```

- \new@lineR** The `\new@lineR` macro sends the `\@nl` command to the right text line-list file, to mark the start of a new text line.

```

598 \newcommand*{\new@lineR}{%
599   \write\linenum@outR{\string\@nl[\the\c@page] [\thepage]}}
600 %

```

- \flag@start** We enclose a lemma marked by `\edtext` in `\flag@start` and `\flag@end`: these send the `\@ref` command to the line-list file. They are both defined in `reledmac`.

- \startsub** `\startsub` and `\endsub` turn sub-lineation on and off, by writing appropriate instructions to the line-list file. There are both defined in `reledmac`.

- \advanceline** You can use `\advanceline{<num>}` in running text to advance the current visible line-number by a specified value, positive or negative. It is defined in `reledmac`.
- \setline** You can use `\setline{<num>}` in running text (i.e., within `\pstart ... \pend`) to set the current visible line-number to a specified positive value. It is defined in `reledmac`.
- \setlinenum** You can use `\setlinenum{<num>}` before a `\pstart` to set the visible line-number to a specified positive value. It writes a `\l@d@set` command to the line-list file. It is defined in `reledmac`.
- \startlock** You can use `\startlock` or `\endlock` in running text to start or end line number locking at the current line. They decide whether line numbers or sub-line numbers are affected, depending on the current state of the sub-lineation flags. They are defined in `reledmac`.

\skipnumbering

V Marking text for notes

The `\edtext` macro is used to create all footnotes and endnotes, as well as to print the portion of the main text to which a given note or notes is keyed. The idea is to have that lemma appear only once in the .tex file: all instances of it in the main text and in the notes are copied from that one appearance.

- \critext**
\edtext
\set@line The `\set@line` macro is called by `\edtext` to put the line-reference field and font specifier for the current block of text into `\l@d@nums`. It is defined in `reledmac`.

V.1 Specific hooks and commands for notes

The `reledmac` `\newseries@` initializes commands which are linked to notes series. However, to keep `reledmac` as light as possible, it does not define commands which are specific to `reledpar`. This is what does `\newseries@par`. The specific hooks are also defined here.

```
\newseries@par01 \newcommand{\newseries@par}[1]{%
  602 %
```

V.1.1 Notes to be printed on one side only

`reledpar` allows notes to be printed on one side only. We need to declare these options. We also need boolean flags, and to set them to true when a note series is not printed on one side. We check the `nofamiliar` and `nocritical` Eledmac options.

```

603 \unless\ifnofamiliar@%
604   \csgdef{onlysideX@#1}{}%
605   \global\newbool{keepforasideX@#1}%
606 \fi%
607 \unless\ifnocritical@%
608   \global\newbool{keepforXside@#1}%
609   \csgdef{Xonlyside@#1}{}%
610 \fi%
611 %

```

V.1.2 Familiar footnotes without marks

The `\footnoteXnomk` commands are for notes which are printed on the left side, while they are called in the right side. Basically, they set first toggle `\nomark@` to true, then call the `\footnoteX`, and finally add the footnote counter in the footnote counter list.

First, check the `nofamiliar` option of `reledmac`.

```

612 \unless\ifnofamiliar@%
613 % So declare the list.
614 % \begin{macrocode}
615 \expandafter\list@create\csname footnote#1@mk\endcsname%
616 %

```

Then, declare the `\footnoteXnomk` command.

```

617 \expandafter\newcommand\csname footnote#1nomk\endcsname[1]{%
618 %

```

First step: just call the normal `\footnoteX`, saying that we do not want to print the mark.

```

619 \togglettrue{\nomk@}%
620 \csuse{footnote#1}{##1}%
621 \togglefase{\nomk@}%
622 %

```

Second, and last, step: store the footnote counter in the footnote counters list. We use some `\let`, because `\xright@appenditem` is difficult to use with `\expandafter`.

```

623 \letcs{@tmp}{footnote#1@mk}%
624 \numdef{@tmpa}{\csuse{c@footnote#1}}%
625 \global\xright@appenditem{@tmpa}\to@tmp%
626 \global\cslet{footnote#1@mk}{@tmp}%
627 %
628 %

```

Then, declare the command which inserts the footnotemark in the right side.

```

629 \expandafter\newcommand\csname footnote#1mk\endcsname{%
630 %

```

Get the first element of the footnote mark list. As `\gl@p` is difficult to use with dynamic name macro, we use `\let` commands.

```

631   \letcs{\@tmp}{footnote#1@mk}%
632   \gl@p@tmp\to\@tmpa%
633   \global\cslet{footnote#1@mk}{\@tmp}%
634 %

```

Set the footnotecounter with it. For the sake of security, we make a backup of the previous value.

```

635   \letcs{\old@footnote}{c@footnote#1}%
636   \setcounter{footnote#1}{\@tmpa}%
637 %

```

Define the footnote mark and print it

```

638   \protected@csxdef{@thefnmark#1}{\csuse{thefootnote#1}}%
639   \csuse{@footnotemark#1}%
640 %

```

Restore previous footnote counter and finally add space.

```

641   \setcounter{footnote#1}{\old@footnote}%
642   \xspace%
643 %
644 %

```

End of tools for familiar notes without marks

```

645   \fi
646 %

```

End of \newseries@par.

```

647 }%
648 %

```

V.1.3 Create hooks

Read the reledmac code handbook about \newhookcommand@series. Here, we create hooks which are specific to reledpar.

```

649 \unless\ifnocritical@%
650   \newhookcommand@series{Xonlyside}%
651 \fi%
652 \unless\ifnofamiliar@%
653   \newhookcommand@series{onlysideX}%
654 \fi
655
656
657 %

```

V.1.4 Init standards series (A,B,C,D,E,Z)

`\init@series@par` `\newseries@par` is called by `\newseries`. However, this last command is called before `reledpar` is loaded. Thus, we need to initiate a specific series hook for `reledpar`.

```

658 \newcommand{\init@series@par}{%
659   \def\do##1{\newseries@par{##1}}%
660   \dolistloop{\@series}%
661 }%
662 \init@series@par%
663 %

```

VI Pstart numbers dumping and restoration

While in `reledmac` the footnotes are inserted in the same time as the `\pstart...``\pend` are read, in `reledpar` they are inserted when the `\Columns` or `\Pages` commands are called. Consequently, if we do nothing, the value of the `PstartL` and `PstartR` counters are not the same in the main text and in the notes. To solve this problem, we dump the values in two list (one by side) when processing `\pstart` and restore these at each `\pstart` when calling `\Columns` or `\Pages`. We also dump and restore the value of the boolean `\ifnumberpstart`.

So, first step, creating the lists. Here, “pc” means “public counters”.

```

\list@pstartL@pc64 \list@create{\list@pstartL@pc}%
\list@pstartR@pc65 \list@create{\list@pstartR@pc}%
666 %

```

Two commands to dump current pstarts. We prefer two commands to one with argument indicating the side, because the commands are short, and so we save one test (or a `\csname` construction).

```

\dump@pstartL@pc67 \def\dump@pstartL@pc{%
\dump@pstartR@pc68   \xright@appenditem{\the\c@pstartL}\to\list@pstartL@pc%
669   \global\cslet{numberpstart@L}{\l@dnumpstartsL}{\ifnumberpstart}%
670 }%
671 
672 \def\dump@pstartR@pc{%
673   \xright@appenditem{\the\c@pstartR}\to\list@pstartR@pc%
674   \global\cslet{numberpstart@R}{\l@dnumpstartsR}{\ifnumberpstart}%
675 }%
676 
677 %

```

`\restore@pstartL@pc` And so, the commands to restore them.

```

\restore@pstartR@pc678 \def\restore@pstartL@pc{%
679   \ifx\list@pstartL@pc\empty\else%

```

```

680      \gl@p\list@pstartL@pc\to\@temp%
681      \global\c@pstartL=\@temp%
682      \fi%
683  }%
684  \def\restore@pstartR@pc{%
685    \ifx\list@pstartR@pc\empty\else%
686      \gl@p\list@pstartR@pc\to\@temp%
687      \global\c@pstartR=\@temp%
688      \fi%
689  }%
690  %

```

VII Parallel environments

The initial set up for parallel processing is deceptively simple.
`pairs pages`

`chapterinpages` The `pairs` environment is for parallel columns and the `pages` environment for parallel pages.

```

691 \newenvironment{pairs}{%
692   \l@dpairingtrue
693   \l@dpagingfalse
694   \initnumbering@quote
695   \at@begin@pairs%
696 }%
697 \l@dpairingfalse
698 }
699 %
700 %

```

`\AtBeginPairs` The `\AtBeginPairs` macro just define a `\at@begin@pairs` macro, called at the beginning of each `pairs` environments.

```

701 \newcommand{\AtBeginPairs}[1]{\xdef\at@begin@pairs{#1}}%
702 \def\at@begin@pairs{}%
703 %
704 %

```

The `pages` environment additionally sets the ‘column’ widths to the `\textwidth` (as known at the time the package is called). In this environment, there are two text in parallel on 2 pages.

```

705 \newenvironment{pages}{%
706   \l@dpairingtrue
707   \l@dpagingtrue
708   \initnumbering@quote
709   \setlength{\Lcolwidth}{\textwidth}%
710   \setlength{\Rcolwidth}{\textwidth}%

```

```

711 }{%
712   \l@dpairingfalse
713   \l@dpagingfalse
714 }
715 %
716 %

```

ifinstanzaL These boolean tests are switched by the `\stanza` command, using either the left or right side.

```

717 \newif\ifinstanzaL
718 \newif\ifinstanzaR
719 %

```

Leftside Within the pairs and pages environments the left and right hand texts are within **Leftside** and **Rightside** environments, respectively. The **Leftside** environment is simple, indicating that right text is not within its purview and using some particular macros.

```

720 \newenvironment{Leftside}{{%
721   \expandafter\ifvoid\csname l@dLcolrawbox1\endcsname\else%
722   \l@err@Leftside@PreviousNotPrinted%
723 \fi%
724   \l@edRcolfalse
725   \setcounter{pstartL}{1}
726   \let\pstart\pstartL
727   \let\thepstart\thepstartL
728   \let\pend\pendL
729   \let\memorydump\memorydumpL
730   \Leftsidehook
731   \let\old@startstanza@\startstanza
732   \def\@startstanza[##1]{\global\instanzaLtrue\old@startstanza[##1]}
733 }{
734   \Leftsidehookend
735 %

```

\Leftsidehook Hooks into the start and end of the **Leftside** and **Rightside** environments. These are initially empty.

```

736 \Rightsidehook
737 \Rightsidehookend
738 \newcommand*\Leftsidehook{}%
739 \newcommand*\Leftsidehookend{}%
740 %
741 %

```

Rightside The **Rightside** environment is only slightly more complicated than the **Leftside**. Apart from indicating that right text is being provided it ensures that the right right text code will be used.

```

742 \newenvironment{Rightside}{%
743   \expandafter\ifvoid\csname l@dRcolrawbox1\endcsname\else%
744     \led@err@Rightside@PreviousNotPrinted%
745   \fi%
746   \ledRcoltrue
747   \let\beginnumbering\beginnumberingR

750   \let\resumenumbering\resumenumberingR
751   \let\memorydump\memorydumpR
752   \let\thepstart\thepstartR
753   \let\pstart\pstartR
754   \let\pend\pendR
755   \let\ledpb\ledpbR
756   \let\lednopb\lednopbR
757   \let\lineation\lineationR
758   \Rightsidehook
759   \let\old@startstanza\@startstanza
760   \def\@startstanza[##1]{\global\instanzaRtrue\old@startstanza[##1]}
761 }{%
762   \ledRcolfalse
763   \Rightsidehookend
764 }
765 %
766 %

```

VIII Paragraph decomposition and reassembly

In order to be able to count the lines of text and affix line numbers, we add an extra stage of processing for each paragraph. We send the paragraph into a box register, rather than straight onto the vertical list, and when the paragraph ends we slice the paragraph into its component lines; to each line we add any notes or line numbers, add a command to write to the line-list, and then at last send the line to the vertical list. This section contains all the code for this processing.

VIII.1 Boxes, counters, \pstart and \pend

\num@linesR Here are numbers and flags that are used internally in the course of the paragraph decomposition.
\one@lineR

\par@lineR When we first form the paragraph, it goes into a box register, \l@dLcolrawbox or \l@dRcolrawbox for right text, instead of onto the current vertical list. The \ifnumberedpar@ flag will be true while a paragraph is being processed in that way. \num@lines(R) will store the number of lines in the paragraph when it is complete. When we chop it up into lines, each line in turn goes into the \one@line or \one@lineR register, and \par@line(R) will be the number of that line within the paragraph.

```

767 \newcount\num@linesR

```

```

768 \newbox\one@lineR
769 \newcount\par@lineR
770 %

```

\pstartL \pstart starts the paragraph by clearing the \inserts@list list and other relevant variables, and then arranges for the subsequent text to go into the appropriate box. \pstart needs to appear at the start of every paragraph that is to be numbered.

Beware: everything that occurs between \pstart and \pend is happening within a group; definitions must be global if you want them to survive past the end of the paragraph.

We have to have specific left and right \pstart when parallel processing; among other things because of potential changes in the linewidth.

```

771
772 \newcounter{pstartL}
773 \renewcommand{\the pstartL}{\bfseries\arabic{pstartL}. }

VIII.5 Pstart number printing in side

The printing of the pstart number is like in reledmac, with two differences :

- Some commands have versions suffixed by R or L.
- The \affixpstart@num and \affixpstart@numR commands are called in the \Pages command. Consequently, the pstartL and pstartR counters must be reset at the beginning of this command.

```

1418     \global\let\add@inserts@nextR=\add@insertsR
1419   \fi
1420 \fi
1421 \add@inserts@nextR}
1422 %

```

VIII.7 Penalties

\add@penaltiesL \add@penaltiesL is the last macro used by \do@lineL. It adds up the club, widow, and interline penalties, and puts a single penalty of the appropriate size back into the para-

graph; these penalties get removed by the `\vsplit` operation. `\displaywidowpenalty` and `\brokenpenalty` are not restored, since we have no easy way to find out where we should insert them.

In the code below, which is a virtual copy of the original `\add@penalties`, `\num@lines` is the number of lines in the whole paragraph, and `\par@line` is the line we are working on at the moment. The count `\@l@dtempcnta` is used to calculate and accumulate the penalty; it is initially set to the value of `\ballast@count`, which has been worked out in `\do@ballast`. Finally, the penalty is checked to see that it does not go below -10000 .

```
\newcommand*{\add@penaltiesR}{\@l@dtempcnta=\ballast@count
\ifnum\num@linesR>\@ne
  \global\advance\par@lineR \@ne
  \ifnum\par@lineR=\@ne
    \advance\@l@dtempcnta by \clubpenalty
  \fi
  \ifnum\@l@dtempcntb=\par@lineR \advance\@l@dtempcntb \@ne
  \ifnum\@l@dtempcntb=\num@linesR
    \advance\@l@dtempcnta by \widowpenalty
  \fi
  \ifnum\par@lineR<\num@linesR
    \advance\@l@dtempcnta by \interlinepenalty
  \fi
\fi
\ifnum\@l@dtempcnta=\z@
  \relax
\else
  \ifnum\@l@dtempcnta>-10000
    \penalty\@l@dtempcnta
  \else
    \penalty -10000
  \fi
\fi
\fi}
```

This is for a single chunk. However, as we are probably dealing with several chunks at a time, the above is not really relevant. Peter Wilson thinks that it is likely with parallel text that there is no real need to add back any penalties; even if there was, they would have to match across the left and right lines. So, Peter Wilson ends up with the following.

```
1424 \newcommand*{\add@penaltiesL}{}
1425 \newcommand*{\add@penaltiesR}{}
1426
1427 %
```

VIII.8 Printing leftover notes

`\flush@notesR` The `\flush@notesR` macro is called after the entire right text has been sliced up and sent on to the vertical list.

```

1428 \newcommand*{\flush@notesR}{%
1429   \c@xloop
1430   \ifx\inserts@listR\empty \else
1431     \gl@p\inserts@listR\to\c@insertR
1432     \c@insertR
1433     \global\let\c@insertR=\undefined
1434   \repeat}
1435 %
1436 %

```

IX Footnotes

IX.1 Line number printing

The `\printlinesR` macro prints the line numbers for a note—which, in the general case, is a rather complicated task. The seven parameters of the argument are the line numbers as stored in `\l@d@nums`, in the form described on V.9 p. 82 of Eledmac' handbook: the starting page, line, and sub-line numbers, followed by the ending page, line, and sub-line numbers, and then the font specifier for the lemma.

`\printlinesR` This is the right text version of `\printlines` and takes account of `\@Rlineflag`. Just a reminder of the arguments:

```
\printlinesR #1 | #2 | #3 | #4 | #5 | #6 | #7
\printlinesR start-page | line | subline | end-page | line | subline | font
```

```

1437 \def\printlinesR#1|#2|#3|#4|#5|#6|#7{|{\begingroup
1438   \setprintlines{#1}{#2}{#3}{#4}{#5}{#6}%
1439   \ifl@d@pnum #1\fullstop\fi
1440   \ifl@dpnum \linenumr@p{#2}\@Rlineflag\else \symplinenum\fi
1441   \ifl@d@ssub \fullstop \sublinenumr@p{#3}\fi
1442   \ifl@d@dash \endashchar\fi
1443   \ifl@d@pnum #4\fullstop\fi
1444   \ifl@d@elin \linenumr@p{#5}\@Rlineflag\fi
1445   \ifl@d@esl \ifl@d@elin \fullstop\fi \sublinenumr@p{#6}\fi
1446 \endgroup}
1447
1448 %

```

IX.2 Footnotes output specific to \Pages

`\print@Xnotes@forpages` The `\Xonlyside` and `\onlysideX` hooks for `\Pages` allow notes to be printed either in left or right pages only. The implementation of such features is delegated to `\print@notesX@forpages`, which replaces `\print@Xnotes` inside `\Pages`. Here is `\correct@footinsX@box` how we proceed⁶:

⁶See <http://tex.stackexchange.com/a/230332/7712>.

- If notes are to be printed in both sides, we just proceed the usual way: print the foot starts for the series, then the foot group.
- If notes are to be printed in the left side, we do these prints only for even pages ; if notes are to be printed in the right side, we do these prints only for odd pages.
- However, that is not enough. Because the problem does not only consists in printing notes in any particular page. It is also not to put aside room for notes in the pages where we do not want to print them. To take an example: if some note in the left side is too long by 160pt to be printed in full in the left page, we do not want to put aside 160pt a space for it in the following right page.
- To solve this problem, we change the magnification factor associated with notes before going to the next page. If we start a page where no notes are supposed to be printed, the magnification counter is set to 0. We also set the note skip to 0pt. Before starting a new page where these notes are supposed to be printed, we reset these counter and skip to their default values. (About these counter and skip, read *The TeXbook* p. 122-125).
- There still remains a last problem. This problem is quite complex to understand, so an example will speak for itself. Suppose we allow 10 lines of notes by page. Suppose a long note, be it 25 lines, which needs three pages to be printed. Suppose it must be printed only on left pages, namely odd pages.

On p. 2, the first 10 lines of the notes are printed. On p. 3, the box associated to the notes contains 10 lines. However, as we are in a right page, we do not void this box. So \TeX will keep its content for the pages to come. However, on p. 4 it will also add one line in the footnote box, because in any case, \TeX adds some content in the box when preparing the output routines, even if there is some content left in this box from the previous pages. So the lines in the note box at p. 4 will be $10 + 1 = 11$. There is one line which should not be there. Furthermore, as the box size is for 10 lines and not for 11 lines, this last line will be glued to the previous one.

To fix this double issue:

- For the pages where notes must be NOT printed, we allow to every note box one line less than it ought to be. In our example, that means that we allow \TeX to add only $10 - 1 = 9$ line in the note box on p. 3. Before shifting to the pages where notes must be printed, we allow to every notes the expected number of lines. In our example, that means that we allow \TeX to add 10 lines in the note box on p. 4. As on p. 3 only 9 lines were allowed, that means note box of p. 4 will contain $9 + 1 = 10$ lines. So the “one line too many” problem is solved.
- Still remains the “glue” problem. We solve it by recreating a clean note box. We split the one which is created by \TeX to get the next line printed. Then, we create the new box, by bringing together the first part and the last part of the split box, adding some skip between them. That is achieved

by `\correct@Xfootins@box` (or `\correct@footinsX@box` for familiar notes).

The code to print critical notes, when processing `\Pages`.

```
1450 \newcommand\print@Xnotes@forpages[1]{%
1451   %
```

First case: notes are for both sides. Just print the note start and the note group

```
1452   \ifcsempty{Xonlyside@#1}{%
1453     \csuse{#1footstart}{#1}%
1454     \csuse{#1footgroup}{#1}%
1455   }%
1456   %
```

Second case: notes are for one side only. First test if we are in a page where they must be printed.

```
1457   {%
1458     \ifboolexpr{%
1459       ((test {\ifcsstring{Xonlyside@#1}{L}} and not test{\ifnumodd{\c@page}%
1460       }})%
1461       or%
1462       (test {\ifcsstring{Xonlyside@#1}{R}} and test{\ifnumodd{\c@page}}))%
1463     }%
1464   %
```

If we are in a page where notes must be printed, print the notes, after having made the corrections which are needed for boxes.

```
1464   {%
1465     \correct@Xfootins@box{#1}%
1466     \csuse{#1footstart}{#1}%
1467     \csuse{#1footgroup}{#1}%
1468   %
```

Then, say not to keep room for notes in the next page.

```
1469   \global\count\csuse{#1footins}=0%
1470   \global\skip\csuse{#1footins}=0pt%
1471   %
```

And also, allow one line less for notes in the next page.

```
1472   \csuse{Xnotefontsize@#1}%
1473   \global\advance\dimen\csuse{#1footins} by -\baselineskip%
1474   %
```

Now we have printed the notes. So we put aside this fact.

```
1475   \global\boolfalse{keepforXside@#1}%
1476   }%
1477   %
```

In case we are on a page where notes must NOT be printed. First, memorize that we have not printed the notes, despite having some to print.

```
1478   {%
1479     \global\booltrue{keepforXside@#1}%
1480   }%
```

Then restore expected rooms for notes on the next page.

```
1481   \global\count\csuse{#1footins}=\csuse{default@#1footins}%
1482   \global\skip\csuse{#1footins}=\csuse{Xbeforenotes@#1}%
1483   %
```

Last but not least, restore the normal line number allowed to notes for the following page.

```
1484   \bgroup%
1485     \csuse{Xnotefontsize@#1}%
1486     \global\advance\dimen\csuse{#1footins} by \baselineskip%
1487   \egroup%
1488   %
```

```
1489   % End of \protect\cs{print@Xnotes@forpages} .
1490   }%
1491   }%
1492   }%
1493   %
```

Now, \correct@Xfootins@box, to fix problem of last line being glued to the previous one.

```
1494 \newcommand{\correct@Xfootins@box}[1]{%
1495 }
```

We need to make correction only in case we have not printed any note in the previous page, although there was to be “normally” printed.

```
1496 \ifbool{keepforXside@#1}{%
1497 }
```

Some setting needed to do the right splitting.

```
1498   \csuse{Xnotefontsize@#1}%
1499   \splittopskip=0pt%
1500   %
```

And now, split the last line, and push in the right place.

```
1501   \global\setbox\csuse{#1footins}=\vbox{%
1502     \vsplit\csuse{#1footins} to \dimexpr\ht\csuse{#1footins}-1pt\relax%
1503     \vskip \dimexpr-0.5\baselineskip-0.5\lineskip-0.5pt\relax%
1504     \unvbox\csuse{#1footins}%
1505   }%
1506   %
```

End of the macro.

```

1507     }{}}%
1508 }%
1509 %

```

And now, the same for familiar footnotes.

```

1510 \newcommand{\print@notesX@forpages}[1]{%
1511   \ifcsempty{onlysideX@#1}{%
1512     \csuse{footstart#1}{#1}%

```

X Cross referencing

`\labelref@listR` Set up a new list, `\labelref@listR`, to hold the page, line and sub-line numbers for each label in right text.

```
1554 \list@create{\labelref@listR}
1555 %
1556 %
```

`\edlabel` This command is defined only one time in `reledmac`, including features for `reledpar`.

`\l@dmake@labelsR` This is the right text version of `\l@dmake@labels`, taking account of `\@Rlineflag`.

```
1557 \def\l@dmake@labelsR#1|#2|#3|#4|#5{%
1558   \expandafter\ifx\csname the@label#5\endcsname \relax\else
1559     \led@warn@DuplicateLabel{#4}%
1560   \fi
1561   \expandafter\gdef\csname the@label#5\endcsname{#1|#2\@Rlineflag|#3|#4}%
1562   \ignorespaces}
1563 \AtBeginDocument{%
1564   \def\l@dmake@labelsR#1|#2|#3|#4|#5{}%
1565 }
1566 %
1567 %
```

`\@lab` The `\@lab` command, which appears in the `\linenum@out` file, appends the current values of page, line and sub-line to the `\labelref@list`. These values are defined by the earlier `\@page`, `\@nl`, and the `\sub@on` and `\sub@off` commands appearing in the `\linenum@out` file.

It is defined on `reledmac`.

XI Side notes

Regular `\marginpars` do not work inside numbered text — they do not produce any note but do put an extra unnumbered blank line into the text.

`\sidenote@marginR` Specifies which margin sidenotes can be in.

```
\sidenotemargin*
1568 \WithSuffix\newcommand\sidenotemargin*[1]{%
1569   \l@dgetsidenote@margin{#1}
1570   \global\sidenote@marginR=\@l@dtmpcntb
1571   \global\sidenote@margin=\@l@dtmpcntb
1572 }
1573 \newcount\sidenote@marginR
1574 \global\sidenote@margin=\@ne
1575 %
1576 %
```

\affixside@noteR The right text version of \affixside@note.

```

1577 \newcommand*\affixside@noteR{%

XII Familiar footnotes

`\l@dbfnote` `\l@dbfnote` adds the footnote to the insert list, and `\vl@dbfnote` calls the original `\@footnotetext`. There are both defined in `reledmac`.

`\normalbfnote`

XIII Verse

Like in `reledmac`, the insertion of `hangingsymbol` is base on `\ifinserthangingsymbol`, and, for the right side, on `\ifinserthangingsymbolR`. Both commands also include the hanging space, to be sure the `\one@line` of hanging lines has the same width that the `\one@line` of normal lines and to prevent the column separator from shifting.

```

\inserthangingsymbolL24 \newif\ifinserthangingsymbolR
\inserthangingsymbolR25 \newcommand{\inserthangingsymbolL}{%
  \ifinserthangingsymbol%
    \ifinstanzaL%
      \hskip \@ifundefined{sza@0@}{0}{\expandafter}%
        \noexpand\csname sza@0@\\endcsname\stanzaindentbase\%
        \changingsymbol%
      \fi%
    \fi%
  }%
\inserthangingsymbolR26 \newcommand{\inserthangingsymbolR}{%
  \ifinserthangingsymbolR%
    \ifinstanzaR%
      \hskip \@ifundefined{sza@0@}{0}{\expandafter}%
        \noexpand\csname sza@0@\\endcsname\stanzaindentbase\%
        \changingsymbol%
      \fi%
    \fi%
  }%

```

Before we can define the main stanza macros we need to be able to save and reset the category code for `&`. To save the current value we use `\next` from the `\loop` macro.

```

1644 \chardef\next=\catcode`\\&
1645 \catcode`\\&=\active
1646 %
1647 %

```

`astanza` This is roughly an environmental form of `\stanza`, which treats its stanza-like contents as a single chunk.

```

1648 \newenvironment{astanza}[1] []{%
  \catcode`\\&=\active
  \global\stanza@count\one\stanza@modulo\one
}

```

```

1651 \ifnum\usenamecount{sza@0@}=\z@%
1652   \let\stanza@hang\relax
1653   \let\endlock\relax
1654 \else
1655   \rightskip\z@ plus 1fil\relax
1656 \fi
1657 \ifnum\usenamecount{szp@0@}=\z@%
1658   \let\sza@penalty\relax
1659 \fi
1660 \def&{%
1661   \endlock\mbox{}%
1662   \sza@penalty
1663   \global\advance\stanza@count\@ne
1664   \astanza@line}%
1665 \def\&{\astopastanza}%
1666 \pstart[#1]%
1667 \astanza@line
1668 }{%
1669 %
1670 %

```

`\astopastanza` This command is called by `\&` in `astanza` environment. It allows optional arguments.

```

1671 \newcommandx{\astopastanza}[1][1,usedefault]{%
1672   \endlock\mbox{}%
1673   \pend[#1]%
1674 }%
1675 %

```

`\astanza@line` This gets put at the start of each line in the environment. It sets up the paragraph style
– each line is treated as a paragraph.

```

1676 \newcommand*{\astanza@line}{%
1677   \ifnum\value{stanzaindentsrepetition}=0
1678     \parindent=\csname sza@\number\stanza@count
1679       @endcsname\stanzaindentbase
1680   \else
1681     \parindent=\csname sza@\number\stanza@modulo
1682       @endcsname\stanzaindentbase
1683     \managestanza@modulo
1684   \fi
1685   \par
1686   \stanza@hang%\mbox{}%
1687   \ignorespaces}
1688 %
1689 %

```

Lastly reset the modified category codes.

```

1690 \catcode`\&=\next
1691 %
1692 %

```

\thestanzaL And now, the left and right stanza counter.

```

\thestanzaR
1693 \newcounter{stanzaL}
1694 \newcounter{stanzaR}
1695 \renewcommand{\thestanzaL}{%
1696   \textbf{\arabic{stanzaL}}%
1697 }
1698 \renewcommand{\thestanzaR}{%
1699   \textbf{\arabic{stanzaR}}%
1700 }
1701 %
1702 %

```

XIV Naming macros

The L^AT_EX kernel provides \c@namedef and \c@namuse for defining and using macros that may have non-letters in their names. We need something similar here as we are going to need and use some numbered boxes and counters.

\newnamebox A set of macros for creating and using ‘named’ boxes; the macros are called after the regular box macros, but including the string ‘name’.

```

\unhnamebox
1703 \providecommand*{\newnamebox}[1]{%
1704   \expandafter\newbox\csname #1\endcsname}
\unvnamebox
1704 \providecommand*{\setnamebox}[1]{%
1705   \expandafter\setbox\csname #1\endcsname}
\namebox
1705 \providecommand*{\unhnamebox}[1]{%
1706   \expandafter\unhbox\csname #1\endcsname}
1707 \providecommand*{\unvnamebox}[1]{%
1708   \expandafter\unvbox\csname #1\endcsname}
1709 \providecommand*{\namebox}[1]{%
1710   \expandafter\namebox\csname #1\endcsname}
1711 \providecommand*{\newnamebox}[1]{%
1712   \csname #1\endcsname}
1713 %
1714 %

```

\newnamecount Macros for creating and using ‘named’ counts.

```

\usenamecount
1715 \providecommand*{\newnamecount}[1]{%
1716   \expandafter\newcount\csname #1\endcsname}
1717 \providecommand*{\usenamecount}[1]{%
1718   \csname #1\endcsname}
1719 %
1720 %

```

XV Fixing babel and polyglossia

With parallel texts there is the possibility that the two sides might use different languages via `babel`. On the other hand, nor `babel` nor `polyglossia` might not be called at all (even though it might be already built into the format).

With the normal sequential text each line is initially typeset in the current language environment, and then it is output at which time its attachments are typeset (in the same language environment). In the parallel case lines are typeset in their current language but an attachment might be typeset outside the language environment of its line if the left and right side languages are different. To counter this, we have to make sure that the correct language is used at the proper times.

```
\ifl@dusedbabel A flag for checking if babel has been used as a package.  
\l@dusedbabelfalse  
 \l@dusedbabeltrue1721 \newif\ifl@dusedbabel  
 1722 %
```

`\l@dchecklang`

`\bbbl@set@language` In `babel` the macro `\bbbl@set@language{\langle lang\rangle}` does the work when the language `\langle lang\rangle` is changed via `\selectlanguage`. Unfortunately for us, if it is given an argument in the form of a control sequence it strips off the `\` character rather than expanding the command. We need a version that accepts an argument in the form `\lang` without it stripping the `\`.

```
1723 \patchcmd{\bbbl@set@language}{%  
 1724 {\select@language{\languagename}}%  
 1725 {\edef\languagename{\#1}\select@language{\languagename}}%  
 1726 {}%  
 1727 {}%  
1728 %  
1729 %
```

The rest of the setup has to be postponed until the end of the preamble when we know if `babel` or `polyglossia` have been used or not. However, for now assume that it has not been used.

```
\selectlanguage \selectlanguage is a babel command. \theledlanguageL and \theledlanguageR  
\l@duselanguage are the names of the languages of the left and right texts. \l@duselanguage is similar  
to \selectlanguage.  
\theledlanguageR1730 \newcommand*{\l@duselanguage}[1]{  
 1731 \gdef\theledlanguageL{}  
 1732 \gdef\theledlanguageR{}  
1733 %  
1734 %
```

Now do the `babel` or `polyglossia` fix or, if necessary.

```

1735 \AtBeginDocument{%
1736   \@ifundefined{xpg@main@language}{%
1737     \@ifundefined{bb@main@language}{%
1738   }%

```

Either `babel` has not been used or it has been used with no specified language.

```

1739   \l@dusedbabelfalse
1740   }%}
1741 %

```

Here we deal with the case where `babel` has been used. `\selectlanguage` has to be redefined to use our version of `\bb@set@language` and to store the left or right language.

```

1742   \l@dusedbabeltrue
1743   \let\l@doldselectlanguage\selectlanguage
1744   \let\l@doldbb@set@language\bb@set@language
1745   \renewcommand{\selectlanguage}[1]{%
1746     \l@doldselectlanguage{\#1}%
1747     \ifledRcol \gdef\theledlanguageR{\#1}%
1748     \else      \gdef\theledlanguageL{\#1}%
1749     \fi}%
1750 %

```

`\l@duselanguage` simply calls the original `\selectlanguage` so that `\theledlanguageL` and `\theledlanguageR` are unaltered.

```

1751   \renewcommand*{\l@duselanguage}[1]{%
1752     \l@doldselectlanguage{\#1}%
1753   %

```

Lastly, initialise the left and right languages to the current `babel` one.

```

1754   \gdef\theledlanguageL{\bb@main@language}%
1755   \gdef\theledlanguageR{\bb@main@language}%
1756   }%
1757 }
1758 %

```

If use `polyglossia`

```

1759 {
1760   \let\old@otherlanguage\otherlanguage%
1761   \renewcommand{\otherlanguage}[2][]{%
1762     \selectlanguage[\#1]{\#2}%
1763     \ifledRcol \gdef\theledlanguageR{\#2}%
1764     \else      \gdef\theledlanguageL{\#2}%
1765     \fi}%
1766   \let\l@duselanguage\select@language%
1767   \gdef\theledlanguageL{\xpg@main@language}%
1768   \gdef\theledlanguageR{\xpg@main@language}%
1769 %

```

That is it.

```

1769  }
1770 %

```

XVI Counts and boxes for parallel texts

In sequential text, each chunk (that enclosed by `\pstart ... \pend`) is put into a box called `\raw@text` and then immediately printed, resulting in the box being emptied and ready for the next chunk. For parallel processing multiple boxes are needed as printing is delayed. We also need extra counters for various things.

`\maxchunks` The maximum number of chunk pairs before printing has to be called for. The default is `\l@dc@maxchunks` 5120 chunk pairs.

```

1771 \newcount\l@dc@maxchunks
1772 \newcommand{\maxchunks}[1]{\l@dc@maxchunks=#1}
1773   \maxchunks{5120}
1774 %
1775 %

```

`\l@dnumpstartsL` The numbers of left and right chunks. `\l@dnumpstartsL` is defined in `eledmac`.

`\l@dnumpstartsR`

```

1776 \newcount\l@dnumpstartsR
1777 %
1778 %

```

`\l@pscL` A couple of scratch counts for use in left and right texts, respectively.

`\l@pscR`

```

1779 \newcount\l@pscL
1780 \newcount\l@pscR
1781 %
1782 %

```

`\l@dsetuprawboxes` This macro creates `\maxchunks` pairs of boxes for left and right chunks. The boxes are called `\l@dLcolrawbox1`, `\l@dLcolrawbox2`, etc.

```

1783 \newcommand*{\l@dsetuprawboxes}{%
1784   \l@dtmpcntb=\l@dc@maxchunks
1785   \loop\ifnum\l@dtmpcntb>\z@
1786     \newnamebox{\l@dLcolrawbox}{\the\l@dtmpcntb}
1787     \newnamebox{\l@dRcolrawbox}{\the\l@dtmpcntb}
1788     \advance\l@dtmpcntb \m@ne
1789   \repeat}
1790 %
1791 %

```

`\l@dsetupmaxlinecounts` To be able to synchronise left and right texts we need to know the maximum number of text lines there are in each pair of chunks. `\l@dsetupmaxlinecounts` creates `\maxchunks` new counts called `\l@dmaxlinesinpar1`, etc., and `\l@dzeromaxlinecounts` zeroes all of them.

```

1792 \newcommand*{\l@dssetupmaxlinecounts}{%
1793   \l@dttempcntb=\l@dc@maxchunks
1794   \loop\ifnum\l@dttempcntb>\z@
1795     \newnamecount{l@dmaxlinesinpar\the\l@dttempcntb}
1796     \advance\l@dttempcntb \m@ne
1797   \repeat}
1798 \newcommand*{\l@dzero maxlinecounts}{%
1799   \begingroup
1800   \l@dttempcntb=\l@dc@maxchunks

When using shiftedpstarts option, a `\l@dleftbox` with a null height is not printed. That means we do not insert blank lines at the end of a left chunk lower than the corresponding right chunk. However, a `\l@dleftbox` with a null height will advance the `\pagetotal` in any case. Because if we do not do this, the `\checkpageL` could let `\ifl@pagefull` to false, and consequently a `\@lopL` equal to 1000 could be written in the numbered file, even if all the lines actually needed for the current page have been printed. `\l@dleftbox`

2420 %
2421 %

```

XIX.5 Page clearing

\cleartoevenpage \cleartoevenpage, which is defined in the memoir class, is like \clear(double)page except that we end up on an even page. \cleartol@devenpage is similar except that it first checks to see if it is already on an empty page.

```

2422 \providet命令{\cleartoevenpage}[1][\empty]{
2423   \clearpage
2424   \ifodd\c@page\hbox{}#1\clearpage\fi}
2425 
2426 \newcommand*{\cleartol@devenpage}{
2427   \ifdim\pagetotal<\topskip% on an empty page
2428   \else
2429     \clearpage
2430     \Pages@mainmatter%
2431   \fi
2432   \ifodd\c@page%
2433     \ifprevpgnotnumbered%
2434       \addtocounter{par@page}{-1}%
2435       \ifdef{\prevpgstyle}{\thispagestyle{\prevpgstyle}}{}%
2436     \fi%
2437     \hbox{}\clearpage%
2438   \fi%
2439 }%
2440 %

```

\clearl@leftpage \clearl@rightpage get us onto an odd and even page, respectively, checking that we end up on the subsequent page. Both commands use \newpage and not \clearpage. Because \clearpage prints all footnotes before the next page, even if it has to add new empty pages, while \newpage does not. And as we want notes started in the left page continue in the right page and *vice-versa*, we must use \newpage and not \clearpage

```

2441 \newcommand*{\clearl@leftpage}{%
2442   \ifdim\pagetotal=0pt\hbox{}\fi%
2443   \newpage%
2444   \ifodd\c@page\else

XIX.6 Lines managing

\getlinesfromparlistL \getlinesfromparlistL gets the next entry from the \linesinpar@listL and puts it into \@cs@linesinparL; if the list is empty, it sets \@cs@linesinparL to 0. Similarly for \getlinesfromparlistR.

```

\@cs@linesinparR
2460 \newcommand*{\getlinesfromparlistL}{%
2461   \ifx\linesinpar@listL\empty
2462     \gdef\@cs@linesinparL{0}%
2463   \else
2464     \gl@p\linesinpar@listL\to\@cs@linesinparL
2465   \fi}
2466 \newcommand*{\getlinesfromparlistR}{%
2467   \ifx\linesinpar@listR\empty
2468     \gdef\@cs@linesinparR{0}%
2469   \else
2470     \gl@p\linesinpar@listR\to\@cs@linesinparR
2471   \fi}
2472 %
2473 %

```

\getlinesfrompagelistL \getlinesfrompagelistL gets the next entry from the \linesonpage@listL and \@cs@linesonpageL
\getlinesfrompagelistR \@cs@linesonpageR

puts it into `\@cs@linesonpageL`; if the list is empty, it sets `\@cs@linesonpageL` to 1000. Similarly for `\getlinesfrompagelistR`.

```

2474 \newcommand*{\getlinesfrompagelistL}{%
2475   \ifx\linesonpage@listL\empty
2476     \gdef\@cs@linesonpageL{1000}%
2477   \else
2478     \gl@p\linesonpage@listL\to\@cs@linesonpageL
2479   \fi}
2480 \newcommand*{\getlinesfrompagelistR}{%
2481   \ifx\linesonpage@listR\empty
2482     \gdef\@cs@linesonpageR{1000}%
2483   \else
2484     \gl@p\linesonpage@listR\to\@cs@linesonpageR
2485   \fi}
2486 %
2487 %

```

`\@writelnesonpageL` These macros output the number of lines on a page to the section file in the form of
`\@writelnesonpageR` `\@lopL` or `\@lopR` macros.

```

2488 \newcommand*{\@writelnesonpageL}[1]{%
2489   \edef\next{\write\linenum@out{\string\@lopL{\#1}}}\%
2490   \next}
2491 \newcommand*{\@writelnesonpageR}[1]{%

XIX.8 Getting boxes content

`\if@getnextbox` The `\if@getnextbox` boolean is switched to true if we can get the next chunk in a page after finished previous chunk. That is:

- If we use the `nosyncpstarts` option, in any case
- If we do not use it, only when the number or real or blank line of the current chunk is equal or greater to the maximum number of line in the current pair of chunks.

```

XX Page numbering

XX.1 Global options

The `sameparallelpagenumber` option allows the same page number on both left and right side. The `prevpgnotnumbered` option allows an empty (not numbered) right-side page before `\Pages`.

We cannot implement these two options by changing the value of the page counter, since its value is used by many L^AT_EX features to determine whether a page is left (even-numbered) or right (odd-numbered). Consequently, we have to do it by patching `\thepage`, in order to use the value of the `par@page` counter instead of value of page counter.

This counter will be increased in a patched version of the L^AT_EX's `\@outputpage` macro, as is the page counter in this macro. However, this increase will take account of the options.

`\par@patch@thepage` `\par@patch@thepage` patches `\thepage` in order to use the value of `par@page` counter and not the value of `par@page`. It must be called after any redefinition of `\thepage`. That why we insert it at the end of the L^AT_EXmacro `\pagenumbering`, which is called by some `\xxxmatter` commands. In the case of `memoir` class using, we insert it at the end of `\cempnum`. When using `\pagenumbering`, we also need to restart `par@page` counter. Consequently, we have wrapped `\par@patch@thepage` and counter restart in `\par@patch@pagenumbering`. We also call `\par@patch@thepage` it at the beginning of the document.

```

2787
2788 \newcommand{\par@patch@thepage}{%
2789   \ifboolexpr{%
2790     bool{sameparallelpagenumber}%
2791     or bool{prevpgnotnumbered}%

```

\thepar@page And now, initialize par@page counter.

```

2846 \newcounter{par@page}%
2847 \setcounter{par@page}{1}%
2848 %

```

XX.2 mainmatter option of \Pages

The optional argument of \Pages could be equal to `mainmatter`. In this case the boolean `\ifPages@mainmatter` is set to true, and some special things are done in `\Pages@mainmatter`, called by `\cleartol@devenpage`.

```

\ifPages@mainmatter49 \newif\ifPages@mainmatter
\Pages@mainmatter50 \newcommand{\Pages@mainmatter}{%
  \ifPages@mainmatter%
    \pagenumbering{arabic}%
    \addtocounter{page}{1}%
    \addtocounter{par@page}{-1}%
    \patchcmd{\thepage}{page}{par@page}{}{%
      \fi%
    }%
}
%
```

XXI Sections' titles' commands

As switching from left to right pages does not clear the page since v1.13.0, but only creates new pages, no `\vbox{}` is inserted, and consequently parallel chapters are misaligned.

So we patch the `\chapter` command in order to prevent this problem.

```

\chapter59 \preto{chapter}{%
  \ifl@dprintingpages%
    \vbox{}%
  \fi%
}%
}%
%
```

\eleedsectnotoc \eleedsectnotoc just saves its content \@eleedsectnotoc, which will be tested where sectioning commands will be printed.

```

2867 \newcommand{\eledsectnotoc}[1]{\xdef@\eledsectnotoc{#1}}
2868 \eledsectnotoc{R}
2869 %

```

\eledsectmark \eledsectmark just saves its content \eledsectmark, which will be tested where sectioning commands will be printed.

```

2870 \newcommand{\eledsectmark}[1]{\xdef@\eledsectmark{#1}}
2871 \eledsectmark{L}
2872 %

```

\eledsection@correcting@skip Because the vertical correction needed after inserting a title in parallel depends whether we are in parallel columns or parallel pages, we stock its length in \eledsection@correcting@skip.

```

2873 \newskip\eledsection@correcting@skip
2874 %

```

\eled@sectioningR@out We save the sectioning commands of the right side in the \eled@sectioningR@out file.

```

2875 \newwrite\eled@sectioningR@out
2876 %

```

XXII Page break/no page break, depending on the specific line

We need to adapt the macro of the homonym section of elemac to elepar.

\prev@pbR The \l@prev@pbR macro is a etoolbox's list, which contains the lines in which page breaks occur (before or after). The \l@prev@nopbR macro is a etoolbox list, which contains the lines in which NO page breaks occur (before or after).

```

2877 \def\l@prev@pbR{}
2878 \def\l@prev@nopbR{}
2879 %

```

\ledpbR The \ledpbR macro writes the call to \led@pbR in line-list file. The \ledpbnumR macro writes the call to \led@pbnumR in line-list file. The \lednoppbR macro writes the call to \led@noppbR in line-list file. The \lednopbnumR macro writes the call to \led@nopbnumR in line-list file.

```

2880 \newcommand{\ledpbR}{\write\linenum@outR{\string\led@pbR}}
2881 \newcommand{\ledpbnumR}[1]{\write\linenum@outR{\string\led@pbnumR{#1}}}
2882 \newcommand{\lednoppbR}{\write\linenum@outR{\string\led@noppbR}}
2883 \newcommand{\lednopbnumR}[1]{\write\linenum@outR{\string\led@nopbnumR{#1}}}
2884 %

```

```

`up@correction@notespacing` `\parledgroup@correction@notespacing` is used before each printed line. If it is a line of notes in parallel ledgroup, the space `\parledgroup@notespacing@correction` is decreased, to make interline space correct. The decreased space is added to `\parledgroup@notespacing@correction`.

and `\parledgroup@notespacing@correction@modulo`. If `\parledgroup@notespacing@correction` is equal or greater than `\baselineskip`:

- It is decreased by `\baselineskip`.
- The total of line number in the current page is decreased by one.

For example, suppose an normal interline of 24 pt and interline for note of 12 pt. That means that the two lines of notes take the place of one normal line. For every two lines of notes, the line total for the current place is decreased by one.

```

3000 \fi
3001 %
```

XXV The End

</code>

Appendix A Some things to do when changing version

Appendix A.1 Migration to elepar 1.4.3

Version 1.4.3 corrects a bug added in version 0.12, which made hanging verse always flush right, despite the value of the first element in the `\setstanzaindents` command.

However, if you want to return to automatic flushright margins for verses with hanging indents, you have to redefine the `\hangingsymbol` command.

```
\renewcommand{\hangingsymbol}{\protect\hfill}
```

See the following two examples:

With standard `\hangingsymbol`:

A very long verse should sometimes be hanging. The position of the hanging verse is fixed.

With the modification of the `\hangingsymbol`:

A very long verse should sometimes be hanging. And we can see that a hanging verse is flush right.

Appendix A.2 Migration from elepar to reledpar

As for migration from `elemac` to `reledmac`:

- One option has been removed because it is deprecated.
- Some of the customizations previously made by `\renewcommand` have been replaced with commands.
- Some command names have been changed in order to have a more logical and uniform pattern.

Appendix A.2.1 Deprecated options

The `shiftedverses` option has been removed. Use the general `shiftedpstart` option instead.

Appendix A.2.2 `\renewcommand` replaced with command

Many uses of `\renewcommand` have been replaced with uses of specific commands. Please read the handbook about these particular commands.

<i>Deprecated \renewcommand</i>	<i>Replaced with</i>
<code>\goalfraction</code>	<code>\setgoalfraction</code>
<code>\parledgroupnotespacing</code>	<code>\setparledgroupnotespacing</code>
<code>\Rlineflag</code>	<code>\setRlineflag</code>

Appendix A.2.3 Commands the names of which have changed

In order to ease the migration from `eledpar` to `reledpar`, you may load `reledmac` with `eledmac-compat` option. However, it is advised to change the command names.

<i>Old command</i>	<i>New command</i>
<code>\onlyXside</code>	<code>\Xonlyside</code>

Appendix A.3 Migration to `reledpar` 2.2.0

The `astanza` can take now an option argument. Consequently, if the first line of verse in a `astanza` environment starts with brackets `[]`, you must precede them with a `\relax`. If you do not do it, the content of the brackets will be considered as an optional argument of the `astanza` environment.

Appendix A.4 Migration to `reledpar` 2.3.0

The line number style (alphabetic, numeric, etc.) for the notes of the right side are now defined by the value you set to `\linenumberstyleR` or `\linenumberstyle*`, and not by the value you set to `\linenumberstyle` which is kept for left side.

The same is true for sub-line number styles and `\sublinenumberstyleR` or `\sublinenumberstyle*`, which are distinct from `\sublinenumberstyle`.

Consequently, if you have changed line number representation in footnotes with `\linenumberstyle` and `\sublinenumberstyle`, check your settings for these control sequences.

Appendix A.5 Migration to `reledpar` 2.4.0

We have fixed a bug which misaligned left and right sides when a line contained a dotted letter.

We have tested and saw no problem with this correction, but if you see a difference in alignment between version 2.3.0 and 2.4.0, please contact us.

Change History

v0.1.0.

General: First public release 1

v0.2.0.

General: Added section of babel related code 75

Fix babel problems 1

\Columns: Added \l@dchecklang and \l@duselanguage to \Columns 81

\Pages: Added \l@duselanguage to \Pages 90

v0.3.0.

General: Added \do@lineLhook and \do@lineRhook 55

Added hooks into Leftside environment 46

Reorganize for ledarab 1

\affixline@numR: Changed \affixline@numR to match new eledmac 59

\do@actions@nextR: Used \do@actions@fixedcode in \do@actionsR 57

\do@lineL: Added \do@lineLhook to \do@lineL 53

Simplified \do@lineL by using macros for some common code 53

\do@lineR: Changed \do@lineR similarly to \do@lineL 55

\flag@end: Removed extraneous spaces from \flag@end 40

\ifledRcol: Moved \ifl@dpairing to eledmac 22

\ifpst@rtedR: Moved \ifpst@rtedL to eledmac 25

\l@dlinenumR: Simplified \leftlinenumR and \rightlinenumR by introducing \l@dlinenumR 31

\l@dnumpstartsR: Moved \l@dnumpstartsL to eledmac 77

\ledstrutR: Added \ledstrutL and \ledstrutR 95

\normalbfnoteX: Removed extraneous spaces from \normalbfnoteX 72

\Pages: Added \ledstrutL to \Pages 90

Added \ledstrutR to \Pages 92

\printlinesR: Simplified \printlinesR by using \setprintlines 65

\Rightsidehookend: Added \Leftsidehook, \Leftsidehookend, \Rightsidehook and \Rightsidehookend 46

\sublinenumrepR: Added \linenumrepR and \sublinenumrepR 31

v0.3.a.

General: Minor \linenummargin fix 1

\line@marginR: Do not just set \line@marginR in \linenummargin 29

v0.3.b.

General: Improved parallel page balancing 1

\Pages: Added \l@dminpagelines calculation for succeeding page pairs 93

v0.3.c.

General: Compatiblty with Polyglossia 1

v0.4.0.

General: No more ledparpatch. All patches are now in the main file. 1

v0.5.0.

General: Corrections about \section and other titles in numbered sections 1

v0.6.0.

General: Be able to us \chapter in parallel pages. 1

v0.7.0.

General: Option ‘shiftedverses’ which make there is no blank between two parallel verses with inequal length. 1

v0.8.0.	
General: Possibility to have a symbol on each hanging of verses, like in the french typog-	
raphy. Redefine the commande \hangingsymbol to define the character.	1
v0.9.0.	
General: Possibility to number \pstart.	15
Possibilty to number the pstart with the commands \numberpstarttrue.	1
\ifledRcol: Moved \iflledRcol and \ifnumberingR to elemac	22
v0.9.1.	
General: The numbering of the pstarts restarts on each \beginnumbering.	1
v0.9.2.	
General: Debug : with \Columns, the hanging indentation now runs on the left columns	
and the hanging symbol is shown only when \stanza is used.	1
v0.9.3.	
General: \thepstartL and \thepstartR use now \bfseries and not \bf, which is	
deprecated and makes conflicts with memoir class.	1
v0.10.0.	
General: \edlabel commands on the right side are now correctly indicated.	1
\edlabel commands which start a paragraph are now put in the right place.	1
v0.11.0.	
General: Change \do@lineL and \do@lineR to allow line numbering by pstart (like in	
elemac 0.15).	53
Lineation can be by pstart (like in elemac 0.15).	28
New management of hangingsymbol insertion, preventing undesirable insertions. . .	72
\affixline@numR: Changed \affixline@numR to allow to disable line numbering (like	
in elemac 0.15).	59
\Columns: Line numbering by pstart.	82
\get@nextboxR: Change \get@nextboxL and \get@nextboxR to allow to disable line	
numbering (like in elemac 0.15).	101
Pstart number can be printed in side	102
\inserthangingsymbolR: Prevent the column separator for hanging verse from shifting	72
v0.12.0.	
General: New management of hangingsymbol insertion, preventing undesirable inser-	
tions.	72
v1.0.0.	
General: Compatibility with elemac. Change name to elepar.	1
Debug in lineation by pstart	28
v1.0.1.	
General: Correction on \numberonlyfirstinline with lineation by pstart or by page. .	1
v1.1.0.	
General: Shiftedverses becomes shiftedpstarts.	1
\pstartR: Add \labelpstarttrue (from elemac).	48
v1.1.1.	
\pstartR: Correct \pstartR bug introduced by 1.1.	48
v1.1.2.	
\affixside@noteR: Remove spurious space between line number and line content . .	71
v1.2.0.	
General: Support for \led<section> commands in parallel texts.	1
v1.2.1.	
\initnumbering@sectcountR: For the right section, the counter is defined only once.	26

v1.3.0.		
\edtext:	Manage RTL language.	41
v1.3.1.		
\l@dbfnote:	Compatibility of standard footnotes with elemac when theses footnotes contain any commands.	72
v1.3.2.		
General:	Debug with some classes.	1
v1.3.3.		
General:	Debugging the left notes of the right column.	71
\l@dbfnote:	Spurious space with footnote in right column.	72
v1.3.4.		
General:	Allow use of commands in sidenotes, as introduced by elemac 1.0.	71
v1.3.5.		
\normalbfnoteX:	Allows one to redefine \thefootnoteX with alph when some packages are loaded.	72
v1.4.0.		
General:	Added \do@insidelineLhook and \do@insidelineRhook	55
v1.4.1.		
General:	Enable the use of stanzaidentsrepetition within astanza environment.	72
\normalbfnoteX:	Fix bug with normal familiar footnotes when mixing RTL and LTR text.	72
v1.4.3.		
General:	Corrects a false hanging verse when a verse is exactly the length of a line.	1
\inserthangingsymbolR:	Hanging verse is no longer automatically flush right.	72
\pendL:	Spurious spaces in \pendL.	50
\pendR:	Spurious spaces in \pstartR.	51
\pstartR:	Spurious spaces in \pstartL and \pstartR.	48
v1.5.0.		
General:	Add, as in elemac, features to manage page breaks.	1
\sublinenumincrement*:	Add starred version of \firstlinenum, \linenumincrement, \firstsublinenum, \sublinenumincrement to change both Left and Rightside.	30
v1.6.0.		
General:	Add tool and documentation for parallel ledgroups	18
v1.7.0.		
General:	Add, as in elemac, features to make crossrefs with pstart numbers.	1
v1.8.0.		
General:	\beginnumbering is defined only on elemac, not on elepar.	25
\l@dlsnote, \l@drsnote and \l@dcnote	defined only one time, in elemac.	71
Add \beforecolumnseparator and \aftercolumnseparator.		9
Add \columnsposition.		9
Add, as in elemac, new system of sectioning commands.		1
Add, as in elemac, option to insert something after \pends / verses.		1
Add, as in elemac, option to insert something between \pstarts / verse.		1
Change \do@lineR and \do@lineR to allow new sectioning commands.		53
Compatibility with musitex.		1
Debug elemac sectioning command after using \resumenumeration.		1
New sectioning commands, as in elemac.		19
Suppress \ifl@dsame lang which did not work and was not logical, because both columns could have the same language but not the main language of the document.		75
\Columns:	Modify \Columns to enable to add section's title.	80

Suppress \l@dchecklang from \Columns.	81
\l@dchecklang: Suppress \l@dchecklang which did not work and was not logical, because both columns could have the same language but not the main language of the document.	75
\Pages: Modify \Pages to enable to add section's title.	88
\pendL: As in eledmac, \pendL can have an optional argument.	50
\pendR: As in eledmac, \pendR can have an optional argument.	51
\print@columnseparator: Move some code of \Columns to \print@columnseparator.	83
\pstartR: As in eledmac, \pendL and \pendR can have an optional argument.	48
\sidenotemargin*: \sidenotemargin is now directly defined in eledmac to be able to manage eledpar.	70
Add \sidenotemargin*	70
\theledlanguageR: Correct left/right language setting with polyglossia.	76
v1.8.1.	
\do@lineL: Fix a bug with critical notes at the begining of a page, (maybe added by v1.8.0) (?)	53
\do@lineR: Fix a bug with critical notes at the begining of a page, added by v1.8.0 (?)	55
v1.8.2.	
General: Debug \eledxxx with some paper sizes	1
Debug left and side note (bugs added by 1.8.0)	1
\flag@end: \flag@start and \flag@end are now defined only one time for eledmac and eledpar	40
\lineation*: Add \lineation*	28
\reledpar@error: Errors specific to eledpar send to eledpar handbook	23
v1.8.3.	
General: Add \noeledxxx, as in eledmac	1
\doinsidelineRhook: Added \dolineLhook, \dolineRhook, \doinsidelineLhook and \doinsidelineRhook	55
\Pages: Debug blank pages when using optional argument in the last \pend.	88
\resumenumberingR: Debug \resumenumberingR	27
v1.9.0.	
General: Add \AtBeginPairs macro.	8
Compatibility with \Xnoteswidthliketwocolumns and \notesXwidthliketwocolumns	1
\ifwidthliketwocolumns: Added widthliketwocolumns option	22
\theledlanguageR: Debug left/right language switching with polyglossia. Do not write in .aux file when setting left/right lines.	76
v1.9.1.	
\ifledRcol: Moved \ifl@dpaging to eledmac	22
v1.10.0.	
General: Compatibility with \AtEveryPstart and \AtEveryPend	1
Restore critical notes in \eledsection in parallel columns (this bug was added in 1.8.2).	1
\Pages: Debug wrong pages splitting when no optional argument is used in last \pend (bug was added in v.1.8.3).	88
Debug wrong parallel pages synchronization when an \edtext falls across two pages.	88
v1.10.1.	
\line@list@stuffR: Revert modification of 1.4.2, which makes bugs with numbering. Leave vertical mode to solve spurious space before minipage.	40

v1.11.0.	
General: Compatibility of standard footnotes with some biblatex styles.	1
\edtext: \critext and \edtext are now defined only in elemac.	41
v1.12.0.	
General: Compatibility with Lua ^T E _X RTL languages.	1
\Columns: Add \l@dprintingcolumnstrue	80
\edlabel: \edlabel and \edindex works now with hyperref when using elepar. .	70
\edlabel is now defined only one time for both elemac and elepar	70
\Pages: Add \l@dprintingpagestrue	88
\print@eledsectionL: Compatibility with Lua ^T E _X RTL languages.	54
\print@eledsectionR: Compatibility with Lua ^T E _X RTL languages.	56
\print@lineL: Compatibility with Lua ^T E _X RTL languages.	54
v1.12.1.	
\print@eledsectionL: Fixes bug with Lua ^T E _X RTL \eledsection.	54
v1.13.0.	
General: Enable the use of optional argument of & in astanza environment.	72
Fix bug in shiftedpstarts when size difference between pstarts is very important.	1
With parallel pages, long notes can now flow from the Left to the right side and from the Right to the left side.	1
\clearl@drighthpage: Use \newpage instead of \clearpage.	96
\ifledRcol: Remove false boolean settings which are not needed.	22
\Pages: Prevent false overfull hboxes when using \Pages outside of pages environment. .	89
When using shiftedpstarts option, a \l@dleftbox with a null height will advance the \pagetotal in any case.	88
v1.13.1.	
\correct@footinsX@box: Call \correct@footinsX@box and \correct@Xfootins@box directly in \print@notesX@forpages and \print@Xnotes@forpages.	65
Correct \correct@footinsX@box and \correct@Xfootins@box	65
\Pages: Prevent false empty page after \Pages (bug added in 1.13.0)	88
v1.14.0.	
General: Fix bug with line number position when using \eledsection and similar commands for RTL texts with Lua ^T E _X	1
The \newifs are not followed by boolean values set to false, because it is the T _E X default setting.	1
v1.15.0.	
General: Add \AtEveryPstartCall.	1
Add sameparallelpagenumber option.	12
Fix vertical spurious space before right \eledchapter (bug added in v1.13.0).	1
Prevent vertical space when using \AtEveryPstart or \AtEveryPend with a command which prints nothing	1
\do@actions@nextR: Add action 1008 and 1009	57
\inserthangingsymbolR: Prevent more efficiently the column separator from shifting when a verse is hanging	72
\lineationR: As \lineation, \lineationR automatically set the \pstartinfofootnote.	28
\n@num: \n@num defined only one time for both Elemac and Elepar.	36
\skipnumbering: \skipnumbering defined only one time for both Elemac and Elepar	41

v1.16.0.	
General: Error message when calling \Pages inside ‘pages’ environment and \Columns inside ‘pairs’ environment	1
Error message when starting a Leftside/a Rightside while the previous one has not been yet typeset.	1
Error message when using \beginnumbering... \endnumbering without \pstart.	1
Fix bug with nofamiliar / nocritical option of eleedmac.	1
New package option sameparallelpagenumber to have the same page number for both left and right side.	1
\newseries@par: Fix bug with \onlysideX.	41
v1.16.1.	
General: Write information about line-list file version in the correct file.	1
v1.16.2.	
General: Fix bug when adding empty lines before a \pend in combination with some specific penalties setting.	1
v1.17.0.	
General: Add compatibility of optional argument of \pstart/\pend and \AtEveryPstart/\AtEveryPend with two columns mode.	1
v1.21.0.	
General: Add \hidenumbering	15
v2.0.0.	
\cadv: \cadv defined only in reledmac.	35
\clab: \clab defined only in eleedmac.	70
\cref@regR: \cref defined only in reledmac, code specific to right side moved in \ref@regR.	36
\cset: \cset defined only in reledmac.	35
General: \onl is now defined only in reledmac.	33
\ifbypage@ and \ifbypstart@R defined in eleedmac.	28
Fix some bugs with ‘sameparallelpagenumber’ option.	1
Many code refactored and moved to reledmac.	1
Package’s name becomes reledpar.	1
Totally new implementation of ‘sameparallelpagenumber’ option.	1
\advanceline: \advanceline defined only in reledmac.	41
\bblobset@language: Patch \bblobset@language instead of redefining it	75
\do@lockonR: \do@lockon defined only in reledmac.	35
\endlock: \startlock and \endlock defined only in reledmac.	41
\endsub: \startsub and \endsub defined only in reledmac.	40
\fix@page: \fix@page is defined only once in reledmac	35
chapterinpages: Deleting the old system of managing parallel chapter, keep only the new one with \patchcmd.	45
\l@d@set: \l@d@set defined only in reledmac.	35
\l@dbfnote: \l@dbfnote defined only in reledmac.	72
\line@marginR: \linenummargin now defined only once time in reledmac.	29
\normalbfnoteX: \normalbfnoteX defined only in reledmac.	72
\page@action: \page@action defined only in reledmac.	35
\read@linelist: \read@linelist is defined only once time in \reledmac.	33
\set@line: \set@line defined only in reledmac.	41
\set@line@action: \set@line@action defined only in reledmac.	35
\setline: \setline defined only in reledmac.	41
\setlinenum: \setlinenum defined only in reledmac.	41

\skip@lockoff: \do@lockoff defined only in <code>reledmac</code>	36
\sub@action: \sub@action defined only in <code>reledmac</code>	35
\sublinenumincrement*: \firstlinenum, \linenumincrement, \firstsublinenum, \sublinenumincrement are now defined only in <code>reledmac</code>	30
\theledlanguageR: Patch \otherlanguage instead of redefining it.	76
v2.1.0.	
General: Fix bug when using \eledsection and related on right pages when page width is short.	1
Fix bug when using \pagenumbering with memoir (bug added in v2.0.0).	1
Fix bug with \setparledgroupnotespacing with the shiftedpstarts option.	1
Fix incompatibility between optional argument of \pstart and \numberpstarttrue	1
Options to custom empty right page before \Pages.	1
v2.2.0.	
General: <code>astanza</code> environment can take an optional argument, which will be the optional argument of \pstart started by this environment.	1
New tools to number stanza	1
v2.2.1.	
General: Fix bug with optional argument of last left \pend	1
v2.3.0.	
General: Change some internal codes in order to provide compatibility with L ^A T _E X release of october 2015	1
Fix bug with title number in parallel columns	1
New line setting command suffixed by R to set only the right side.	1
\Pages: Fix bug when calling \Columns after a \Pages (bug added in v1.13.0).	89
v2.4.0.	
General: New way of (not) synchronizing the parallel pages.	1
Option to switch to \mainmatter when calling \Pages	1
\ledstrutR: Deleted \ledstrutL and \ledstrutR	95
Fix bug with dotted letter	95
