

The `aip` substyle for REVTeX*

Arthur Ogawa[†]

Version 4.1h, dated 2009/10/09

This file embodies the implementation of the AIP journal substyles for APS's REVTeX 4.1 document class for electronic submissions to AIP journals.

The distribution point for this work is <http://authors.aip.org/REVTEX>. The archive contains ready-to-Install files, documentation, and full source.

This package is also distributed via CTAN: <http://www.ctan.org/pub/tex-archive/macros/latex/contrib/aip>, and as a ready-to-install image as <http://www.ctan.org/pub/tex-archive/install/macros/latex/contrib/aip.tds.zip>.

The `aip` package was commissioned by the American Institute of Physics and is distributed under the terms of the L^AT_EX Project Public License, the same license under which all the portions of L^AT_EX itself is distributed. Please see <http://ctan.tug.org/macros/latex/base/lppl.txt> for details.

To use this document class, you must have a working T_EX installation equipped with L^AT_EX 2_ε and possibly pdftex and Adobe Acrobat Reader or equivalent.

To install, retrieve the distribution, unpack it into a directory on the target computer, and move the file `aip.rtx` into a location in your filesystem where it will be found by L^AT_EX.

To use, read the user documentation `auguide.pdf`.

1 Overview

REVT_{EX} is a L^AT_EX 2_ε document class, somewhat like a hybrid of the standard L^AT_EX `book` and `article` classes.

This document class implements the AIP society and journal substyles: the journals represent a set of mutually exclusive class options that, in this case, allow the document class to address multiple journals within the AIP family. This society is obtained with class option `aip`.

2 Processing Instructions

The package file `aip.rtx` is generated from this file, `aip.dtx`, using the `DOCSTRIP` facility of L^AT_EX via `tex aip.dtx`. The typeset documentation that you are now reading is generated from the same file by typesetting it with L^AT_EX or `pdftex` via `latex aip.dtx` or `pdflatex aip.dtx`.

2.1 Build Instructions

You may bootstrap this suite of files solely from `aip.dtx`. Prepare by installing L^AT_EX 2_ε (and either `tex` or `pdftex`) on your computer, then carry out the following steps:

1. Within an otherwise empty directory, typeset `aip.dtx` with L^AT_EX or `pdflatex`; you will obtain the typeset documentation you are now reading, along with the installer `aip.ins`, and the file `README`.

Note: you will have to run L^AT_EX twice, then `makeindex`, then L^AT_EX again in order to obtain a valid index and table of contents.

2. Now typeset `aip.dtx` with T_EX (not L^AT_EX), thereby generating the package file `aip.rtx`.

3. Install `aip.rtx` by moving it to a location in your filesystem where it will be found by L^AT_EX, like `tex/latex/aip`.
4. Install `aip.pdf` by moving it to `doc/latex/aip`.
5. Using the `.dbj` information herein, generate the needed `.bst` files and install them in `bibtex/bst/aip`.

2.2 Bill of Materials

Following is a list of the files in this distribution arranged according to provenance.

2.2.1 Primary Source

One single file generates all.

```
%aip.dtx
%
```

2.2.2 Generated by latex aip.dtx

Typesetting the source file under L^AT_EX generates the readme and the installer.

```
%README aip.ins
%
```

2.2.3 Generated by tex aip.dtx

Typesetting the installer generates the package files.

```
%aip.rtx
%
```

2.2.4 Documentation

The following are the online documentation:

```
%aip.pdf
%
```

2.2.5 Auxiliary

The following are auxiliary files generated in the course of running L^AT_EX:

```
%aip.aux aip.idx aip.ind aip.log aip.toc
%
```

3 Code common to all modules

The following may look a bit kloohty, but we want to require only one place in this file where the version number is stated, and we also want to ensure that the version number is embedded into every generated file.

Now we declare that these files can only be used with L^AT_EX 2_ε. An appropriate message is displayed if a different T_EX format is used.

```
1 %<*driver|package>
2 \NeedsTeXFormat{LaTeX2e}[1996/12/01]%
3 %</driver|package>
```

As desired, the following modules all take common version information:

```
4 %<package>\ProvidesFile{aip4-1.rtx}%
5 %<*driver>
6 \expandafter\ProvidesFile\expandafter{\jobname.dtx}%
7 %</driver>
```

The following line contains, for once and for all, the version and date information. By various means, this information is reproduced consistently in all generated files and in the typeset documentation.

```
8 %<*driver|package>
9 [2009/10/09 4.1h AIP substytle for REVTeX]% \fileversion
10 %</driver|package>
```

4 The driver module driver

This module, consisting of the present section, typesets the programmer's documentation, generating the .ins installer and README as required.

Because the only uncommented-out lines of code at the beginning of this file constitute the driver module itself, we can simply typeset the .dtx file directly, and there is thus rarely any need to generate the "driver" DOCSTRIP module. Module delimiters are nonetheless required so that this code does not find its way into the other modules.

The `\end{document}` command concludes the typesetting run.

```
11 %<*driver>
```

4.1 The Preamble

The programmers documentation is formatted with the `ltxdoc` class with local customizations, and with the usual code line indexing.

```
12 \documentclass{ltxdoc}
13 \RequirePackage{ltxdocext}%
14 \let\url\undefined
15 \RequirePackage[colorlinks=true,linkcolor=blue]{hyperref}%
16 \expandafter\ifx\cename package@font\endcsname\relax\else
17 \expandafter\expandafter
18 \expandafter\RequirePackage
```

```

19 \expandafter\expandafter
20 \expandafter{\csname package@font\endcsname}%
21 \fi
22 \gdef\lquote{'}\gdef\rquote{'}%
23 \CodeLineIndex\EnableCrossrefs % makeindex -s gind.ist aip
24 \RecordChanges % makeindex -s gglo.ist -o aip.gls aip.glo

```

4.1.1 Docstrip and info directives

We use so many DOCSTRIP modules that we set the `StandardModuleDepth` counter to 1.

```
25 \setcounter{StandardModuleDepth}{1}
```

The following command retrieves the date and version information from this file.

```
26 \expandafter\GetFileInfo\expandafter{\jobname.dtx}%

```

4.2 The “Read Me” File

As promised above, here is the contents of the “Read Me” file. That file serves a double purpose, since it also constitutes the beginning of the programmer’s documentation. What better thing, after all, to have appear at the beginning of the typeset documentation?

A good discussion of how to write a ReadMe file can be found in Engst, Tonya, “Writing a ReadMe File? Read This” *MacTech* October 1998, p. 58.

Note the appearance of the `\StopEventually` command, which marks the dividing line between the user documentation and the programmer documentation.

The usual user will not be asked to do a full build, not to speak of the bootstrap. Instructions for carrying these processes begin the programmer’s manual.

```

48 The distribution point for this work is

49 `\url{http://authors.aip.org/REVTEX}`.

50 The archive contains ready-to-Install files, documentation, and full source.

51

52 This package is also distributed via CTAN:

53 `\url{http://www.ctan.org/pub/tex-archive/macros/latex/contrib/aip}`, and as a ready-to-install i

54 `\url{http://www.ctan.org/pub/tex-archive/install/macros/latex/contrib/aip.tds.zip}`.

55

56 The `\classname{aip}` package was commissioned by the American Institute of Physics

57 and is distributed under the terms of the `\LaTeX` Project Public License,

58 the same license under which all the portions of `\LaTeX` itself is distributed.

59 Please see `\url{http://ctan.tug.org/macros/latex/base/lppl.txt}` for details.

60

61 To use this document class, you must have a working

62 `\TeX` installation equipped with `\LaTeXe`

63 and possibly `pdftex` and Adobe Acrobat Reader or equivalent.

64

65 To install, retrieve the distribution,

66 unpack it into a directory on the target computer,

67 and move the file `\file{aip.rtx}`

68 into a location in your filesystem where it will be found by `\LaTeX`.

69

70 To use, read the user documentation `\file{auguide.pdf}`.

71

72 `\tableofcontents`

73

74 `\section{Overview}`%

75 `\revtex` is a `\LaTeXe` document class, somewhat like a hybrid of

76 the standard `\LaTeX` `\classname{book}` and `\classname{article}` classes.

77

78 This document class implements the AIP society and journal substyles:

79 the journals represent a set of mutually exclusive class options that, in this case, allow the

80 document class to address multiple journals within the AIP family.

81 This society is obtained with class option `\classoption{aip}`.

82

83 `\section{Processing Instructions}`

84

85 The package file `\file{aip.rtx}`

86 is generated from this file, `\file{aip.dtx}`,

87 using the `{\sc docstrip}` facility of `\LaTeX`

88 via `|tex aip.dtx|`.

89 The typeset documentation that you are now reading is generated from

90 the same file by typesetting it with `\LaTeX` or `pdftex`

91 via `|latex aip.dtx|` or `|pdflatex aip.dtx|`.

92

93 `\subsection{Build Instructions}`

94

95 You may bootstrap this suite of files solely from `\file{aip.dtx}`.

96 Prepare by installing `\LaTeXe` (and either `tex` or `pdftex`) on your computer,

```

97 then carry out the following steps:
98 \begin{enumerate}
99 \item
100 Within an otherwise empty directory,
101 typeset \file{aip.dtx} with \LaTeX\ or pdflatex;
102 you will obtain the typeset documentation you are now reading,
103 along with
104 the installer \file{aip.ins},
105 and the file \file{README}.
106
107 Note: you will have to run \LaTeX\ twice, then \file{makeindex}, then
108 \LaTeX\ again in order to obtain a valid index and table of contents.
109 \item
110 Now typeset \file{aip.dtx} with \TeX (not \LaTeX),
111 thereby generating the package file \file{aip.rtx}.
112 \item
113 Install \classname{aip.rtx}
114 by moving it to a location
115 in your filesystem where it will be found by \LaTeX,
116 like \file{tex/latex/aip}.
117 \item
118 Install \classname{aip.pdf}
119 by moving it to
120 \file{doc/latex/aip}.
121 \item
122 Using the \file{.dbj} information herein,
123 generate the needed \file{.bst} files and install them in
124 \file{bibtex/bst/aip}.
125 \end{enumerate}
126 \end{filecontents*}

```

4.3 The Document Body

Here is the document body, containing only a `\DocInput` directive—referring to this very file. This very cute self-reference is a common `ltxdoc` idiom.

```

127 \begin{document}%
128 \newcommand\revtex{REV\TeX}%
129 \expandafter\DocInput\expandafter{\jobname.dtx}%
130 % ^^A\PrintChanges
131 \end{document}
132 %</driver>

```

5 AIP: A set of journal-specific extensions to REV_{TEX}

To create a journal substyle, you create a `.rtx` file, in our case `aip.rtx`. Within that file, you override procedures and parameter assignments as you see fit. Ide-

ally they will be generally applicable to all of that society's journals (see the file `aps.rtx` for a realization of this scheme). Also within that file, you include a section of code for each journal, that for JMP looks like:

```
% \@ifx{\@journal\journal@jmp}{%
% code specific to the JMP
% }{}%
%
```

6 The aip class option: the aip module

The file `aip.rtx` is read in by the `revtex4` document class if `\@society` has the value `aip`.

Here, code specific to AIP journals appears.

We first give some text entities (amounting to journal abbreviations), then some AIP-specific initialisations, then code for particular AIP journals. In the latter case, the choice is keyed off the macro `\@journal`.

Note on `\AtEndOfClass`: this file, like all journal substyles, is read in at `\AtEndOfClass` time, so you should not use this command in this file. Note for \LaTeX developers: It would be an improvement in \LaTeX to `\let\AtEndOfClass` to something like `\@firstofone`. This change would be effected in `\@onefilewithoptions`.

```
133 %<*package>
```

6.1 Defend Against Forseeable Errors

Protect this file from being read in by anything but `REVTeX`.

```
134 \ifx\undefined\substyle@ext
135 \def\@tempa{%
136 \endinput
137 \GenericWarning{I must be read in by REVTeX! (Bailing out)}%
138 }%
139 \expandafter\else
140 \def\@tempa{%
141 \expandafter\fi\@tempa
142 \class@info{RevTeX society AIP selected}%
```

6.2 Substyle Options

Here are the class options relating to the AIP:

```
143 \DeclareOption{jcp}{\change@journal{jcp}}%
144 \DeclareOption{pop}{\change@journal{pop}}%
145 \DeclareOption{rsi}{\change@journal{rsi}}%
146 \DeclareOption{jap}{\change@journal{jap}}%
147 \DeclareOption{apl}{\change@journal{apl}}%
148 \DeclareOption{cha}{\change@journal{cha}}%
149 \DeclareOption{pof}{\change@journal{pof}}%
150 \DeclareOption{bmf}{\change@journal{bmf}}%
```

```
151 \DeclareOption{rse}{\change@journal{rse}}%
```

```
152 \DeclareOption{jmp}{\change@journal{jmp}}%
```

Option allowing for “numerical author-year” bibliography.

```
153 \DeclareOption{author-numerical}{%
```

```
154   \@booleantrue\authoryear@sw
```

```
155   \@booleantrue\authornum@sw
```

```
156 }%
```

Optionally allow article title in bibliography entries. A new switch is defined here: `\aip@jtitx@sw` signifies that the numbered style bibliography is to be prepared without article titles in `@ARTICLE` entries. Otherwise, such titles are incorporated if present in the `.bib` entry. By default, exclude the article titles.

```
157 \DeclareOption{article-title}{%
```

```
158   \@booleanfalse\aip@jtitx@sw
```

```
159 }%
```

```
160 \@booleantrue \aip@jtitx@sw
```

Establish default options for this society.

```
161 \@booleanfalse\authoryear@sw
```

```
162 \@booleanfalse\authornum@sw
```

For AIP, the preprint style `preprint` is the default.

```
163 \@booleantrue\preprintsty@sw
```

`\showPACS@sw` If `\showPACS@sw` is true, print the PACS information in the title block, otherwise not. Similarly for `\showKEYS@sw` and the keywords.

```
164 \@booleantrue\showPACS@sw
```

```
165 \@booleantrue\showKEYS@sw
```

`\refname` In reprint style only, we eliminate the head above the bibliography.

```
166 \appdef\setup@hook{%
```

```
167   \preprintsty@sw}{%
```

```
168   \let\refname\@empty
```

```
169 }%
```

```
170 }%
```

6.3 AIP Setup

Here we define the default procedures for AIP journals. Individual AIP journals may override these definitions.

6.3.1 Running header and footer

Page style for all AIP journals. We assert our own page style only if nobody else has done so. Users wishing to customize their documents will be able to invoke a `\pagestyle` command anywhere in the preamble. FIXME: `\preprintsty@sw` is defined?

```
171 \appdef\setup@hook{%
```

```

172 \preprintsty@sw{%
173 \ps@preprint
174 }{%
175 \ps@article
176 }%
177 }%

```

The spc says: “Running title must be provided on title page”, and that journal classes 1b and 2 have no running title.

```

178 \def\ps@preprint{%
179 \def\@oddhead{\@runningtitle\hfil}%
180 \def\@evenhead{\@runningtitle\hfil}%
181 \def\@oddfoot{\hfil\thepage\quad\checkindate\hfil}%
182 \def\@evenfoot{\hfil\thepage\quad\checkindate\hfil}%
183 \let\@mkboth\@gobbletwo
184 \let\sectionmark\@gobble
185 \let\subsectionmark\@gobble
186 }%
187 \def\ps@article{%
188 \def\@evenhead{\let\\heading@cr\thepage\quad\checkindate\hfil\@runningtitle}%
189 \def\@oddhead{\let\\heading@cr\@runningtitle\hfil\checkindate\quad\thepage}%
190 \def\@oddfoot{}%
191 \def\@evenfoot{}%
192 \let\@mkboth\@gobbletwo
193 \let\sectionmark\@gobble
194 \let\subsectionmark\@gobble
195 }%
196 \def\@runningtitle{\@shorttitle}%

```

6.3.2 Title block

The specifics of the title block. Apply to all AIP journals; individual journals may override these settings.

```

\tITLEPAGE
197 \renewenvironment{titlepage}{%
198 \let\wastwocol@sw\twocolumn@sw
199 \onecolumngrid
200 \newpage
201 \thispagestyle{titlepage}%
202 \c@page\z@ article sets this to one not zero???
203 }{%
204 \wastwocol@sw\twocolumngrid\newpage}%
205 }%

```

\@fnsymbol On the title page, footnotes are lettered with right parenthesis: “a”).

```

206 \let\@fnsymbol@latex\@fnsymbol
207 \let\@fnsymbol\@alph

```

`\adjust@abstractwidth` This procedure is used by many titlepage elements to indent on the left by a particular amount. The author list uses `\frontmatter@authorformat` to accomplish the same.

```
208 \def\adjust@abstractwidth{%
209 \parindent1em\relax
210 \advance\leftskip.5in\relax
211 \@totalleftmargin\leftskip
212 \@afterheading\@afterindentfalse
213 }%
```

`\frontmatter@abstractheading` AIP Journals all set the abstract head the same way, with no head.

```
214 \def\frontmatter@abstractheading{}
```

`\frontmatter@abstractfont` All AIP journals set the abstract body the same way.

```
215 \def\frontmatter@abstractfont{%
216 %\small
217 \adjust@abstractwidth
218 }%
```

All AIP journal preprints use separate titlepage and full-width abstract.

```
219 \appdef\setup@hook{%
220 \preprintsty@sw{%
221 \@booleantrue\titlepage@sw
222 % \def\frontmatter@affiliationfont{\it}%
223 \let\section\section@preprintsty

6.3.3 Lead-in paragraph

The `Lead-in paragraph` environment formats the AIP “lead paragraph”. To avoid introducing new syntax, we take over the `quotation` environment until the first `\section` (or other sectioning command) appears.

```
353 \newenvironment{Lead@inParagraph}{%
354 \par
355 \bfseries
356 \@afterheading\@afterindentfalse
357 }{%
358 \par
359 \hb@xt@\hsize{\hfil\leaders\hrule\hfil\leaders\hrule\hfil\hfil}%
360 }%
```

At the beginning of the document temporarily change the meaning of the `quotation` environment, restoring it once the first sectioning command is given.

```
361 \appdef\frontmatter@init{%
362 \let@environment{quotation@ltx}{quotation}%
363 \let@environment{quotation}{Lead@inParagraph}%
364 }%
365 \appdef\@startsection@hook{%
366 \let@environment{quotation}{quotation@ltx}%
367 }%
```

6.3.4 Stacked Heads

All AIP journals put a period (`.`), followed by quad space, after the section number. Also, no hanging section number.

```
368 \def\@seccntformat#1{\csname the#1\endcsname.\quad}%
369 \def\@hang@from#1#2#3{#1#2#3}%
```

Note that in the following, we wish to set the section head uppercase, so we use David Carlisle’s `\MakeTextUppercase`. However, because this procedure effectively parses its argument (looking for things to *not* translate), it has to be invoked in such a way that the argument of the `\section` command is passed to it as its own argument.

To accomplish this, we use the `\@hangfrom@` hook, which was developed for this purpose.

```

6.3.11 Bibliography

Customize the REVTeX for the AIP society. this task requires three components: the BibTeX aipnum.bst and aipauth.bst style files, customizing code for natbib, and customizations of the thebibliography environment.

`\@bibstyle` Define the argument of the `\bibliographystyle` command. The user must have installed a `.bst` file of the corresponding name. This file will then be used by `BIBTEX` when compiling the document's `.bbl` file.

The default bibliography style for the AIP journal substyles are `aipnum.bst` and `aipauth.bst`. To generate them, use `custom-bib` version 4.21 or later. Run the `.bst` generator, `makebst.tex`, and accept all defaults, with the following exceptions:

1. ORDERING OF REFERENCES: `c: seq-no` (references in order of Citation);
2. AUTHOR NAMES: `i: nm-init,ed-au` (Initials + surname);
3. NUMBER OF AUTHORS: `l: max 12, min 12` (there will be three prompts total);
4. TYPEFACE FOR AUTHORS IN LIST OF REFERENCES: `u: nmft,nmft-def` (User defined author font);
5. FONT FOR FIRST NAMES: `u: fnm-def` (First names in user defined font);
6. EDITOR NAMES IN INCOLLECTION ETC: `a: nmfted` (Editors in collection like authors);
7. DATE FORMAT: `p: yr-par` (Date in parentheses);
8. SUPPRESS MONTH: `x: xmth` (Date is year only);
9. TITLE OF ARTICLE: `i: tit-it` (Title italic)
10. ARTICLE TITLE PRESENT: `x: jtit-x` (No article title);
11. JOURNAL NAME FONT: `r: jtfl-rm` (Journal title normal);
12. TECHNICAL REPORT TITLE: `b: trtit-b` (Tech. report title like books);
13. JOURNAL VOLUME: `b: vol-bf` (Volume bold);
14. VOLUME PUNCTUATION: `c: volp-com` (Volume with comma);
15. PAGE NUMBERS: `f: jpg-1` (Only start page number);
16. JOURNAL NAME PUNCTUATION: `x: jnm-x` (Space after journal);
17. PUBLISHER IN PARENTHESSES: `d: pub-date` (Publisher and date in parentheses);
18. PUBLISHER POSITION: `p: pre-pub` (Publisher before chapter, pages);
19. ISBN NUMBER: `isbn:` (Include ISBN for books, booklets)
20. ISSN NUMBER: `issn:` (Include ISSN for periodicals)
21. EDITOR IN COLLECTIONS: `b: edby` (Booktitle, edited by ...);

22. PUNCTUATION BETWEEN SECTIONS (BLOCKS): c: blk-com (Comma between blocks);
23. ABBREVIATE WORD 'PAGES': a: pp ('Page' abbreviated);
24. ABBREVIATE WORD 'EDITORS': a: ed ('Editor' abbreviated);
25. OTHER ABBREVIATIONS: a: abr (Abbreviations);
26. ABBREVIATION FOR 'EDITION': a: ednx ('Edition' abbreviated as 'ed');
27. EDITION NUMBERS: n: ord (Numerical editions);
28. STORED JOURNAL NAMES: a: jabr (Abbreviated journal names);
29. FONT OF 'ET AL': i: etal-it (Italic et al);
30. ADDITIONAL REVTeX DATA FIELDS: r: revdata, eprint, url, url-blk (Include REVTeX data fields collaboration, eid, eprint, numpages, url)
31. NEW FONT SELECTION SCHEME: n: nfss (NFSS);
32. ADDITIONAL REVTeX DATA FIELDS: y: revdata (additional data fields);
33. REFERENCE COMPONENT TAGS: y: reference component tags;
34. URL ADDRESS: n: URL as note;

%\generate{\file{aipnum4-1.bst}{\MBopts}}
%\endbatchfile
%

```

Between the two files `aipnum.dbj` and `aipnum.dbj`, the differences are limited: `aipnum.dbj` has two lines lacking in `aipauth.dbj`:

```

% ,seq-no,: Citation order (unsorted, like unsrt.bst)
% ,nm-init,ed-au,: Initials + surname (J. F. Smith)
%

```

thus, the “numbered citation” bibliography is sorted by citation order, and the names are given first initial, then last name.

Likewise, `aipauth.dbj` has two lines lacking in `aipnum.dbj`:

```

% ,ay,: Author-year with some non-standard interface
% ,nat,: Natbib for use with natbib v5.3 or later
% ,blkyear,: Missing date left blank
% ,nm-rev,: Surname + initials (Smith, J. F.)
%

```

Thus, the “author-year” bibliography is sorted by author name, and names are given last name first, followed by initials.

Note that `aipnumlong.dbj` is the same as `aipnum.dbj`, except:

- Remove `jtitt-x`, `jpg-1`. This means article titles and full page range.
- Add `article-title-o`: article title is not required.
- Remove `nm-init`. This means full names.
- The file to be `\generated` is `aip.dtxaipnum4-1long.bst` instead of `aip.dtxaipnum4-1.bst`.

The differences between `aipauthlong.dbj` and `aipauth.dbj` are exactly the same as between `aipnumlong.dbj` and `aipnum.dbj`

To get a banner in the `.blg` file, patch by hand into `apsrev.bst`:

```
% FUNCTION {banner.log} {"REVTeX-compatible apsrev.bst 9812" warning$}
%
```

and invoke `banner.log` from within `begin.bib`

We ensure that the journal substyle has the first word in the matter by installing the (default) AIP code later on (see Section 6.24).

`\pre@bibdata` Set up to write endnotes to a .bib file; its data will be incorporated into the bibliography.

```
571 \def\pre@bibdata{\jobname\bibdata@app}%
```

`\bibsection` We define the sectioning command to use when starting the bibliography (we use `\refname`).

```
572 \def\refname{References}%
573 \def\rtx@bibsection{%
574 \@ifx@empty\refname{%
575 \par\vspace{6\p@ plus 6\p@}%
576 }{%
577 % \let@changfromsection\@chang@froms
578 \expandafter\section\expandafter*\expandafter{\refname}%
579 \@nbreaktrue
580 }%
581 }%
```

`\bibpreamble`

```
\bibsep 582 \let\bibpreamble@empty
\newblock 583 \appdef\setup@hook{%
584 \bibsep\z@relax
585 }%
586 \def\newblock{\ }%
```

`\bibfont` We define the font switch that applies to the body of the bibliography.

```
587 \appdef\setup@hook{%
588 \def\bibfont{%
589 \preprintsty@sw{\footnotesize}%
590 \@clubpenalty\clubpenalty

```

6.3.13 Typesize Processing

The formatting specification for the preprint option is: Times Roman 12 pt, double spacing, with 1-inch margins on letter paper. Paragraphs indented “five spaces”. Display math on standard indent, with equation number flush right in parenthesis, with subequations roman.

That for reprint option is to format similar to the printed journal; with most journals set (approximately analyzed) 10-point, 2-column grid, letter paper.

```

616 \expandafter\def\csname rtx@aip10pt\endcsname{%
617 \let\@currname@class\@currname
618 \def\@currname{aps10pt\substyle@post}%

```

`\today` Procedure `\today` is used in the article class, but not in this document class.

```

635 \def\today{%
636 \number\day\space
637 \ifcase\month
638 \or January\or February\or March\or April\or May\or June%
639 \or July\or August\or September\or October\or November\or December%

```

```
640 \fi\space
641 \number\year
642 }%
```

6.4 A. Running Title

User-provided running title `\@shorttitle` to be set.

6.5 B. Equation numbering, figure and table numbering

Equations can be numbered throughout, or by section, with appendix equations prepended by the appendix label. Figures and tables are numbered throughout.

6.6 C. Title

Title page may break above abstract, within author list. Title notes are signified by superior letter followed by right parenthesis.

6.7 D. Author footnote

Set short line above these footnotes.

6.8 E. Author

Class option `superscriptaddress` is standard.

```
643 \clo@superscriptaddress
```

6.9 F. Affiliations

Set italic.

6.10 G. Received date

6.11 H. Abstract

Single paragraph, no indent.

6.12 J. Lead Paragraph

Set boldface, flush left before main text, single paragraph. Separated from text by a short centered rule.

6.13 K. Headings

Use labels: ROMAN, LETTER, arabic, letter. Set ALLCAPS, boldface; Initial cap, boldface; Initial cap, bold-italic; Initial cap, italic.

Theorem, proof title followed by colon. Follow author.

6.14 L. Text Footnotes

Not permitted; use endnotes.

6.15 M. Citations and Bibliography

Numerical aip.dtxaipnum.bst, author-year aip.dtxaipauth.bst, and numbered author-year aip.dtxaipnumauth.bst are the available choices. Numerical is standard, with all styles permitted in journal classes 3a and 4b.

6.16 N. References

Article Title usage:

Article title required in all journals with "unpublished", "to be published", "in press" and "submitted" refs.

Exceptions:

Journal classes 1a,1b,2,4a:

Article title not allowed in published references, except in the case of "in press" or "submitted" (see sample references below).

Journal class 3a:

Article title allowed but not required in author-year references (use must be consistent within a single manuscript).

Journal class 3b:

Article title required in all journal references and report references.

Journal class 4b:

Article title allowed in journal references in author-year mode.

6.17 O. Examples of Numerical References

6.18 P. References in Author-year mode

6.19 Q. Numbered Author-year References

6.20 R. Tables

Placed within text (floated), labeled with Roman numeral.

Table caption placed above table, followed by space, two double lines, space, table column headings, space, single line, table contents, two double lines.

Footnotes labeled with superior lower-case letter, set below table contents.

6.21 S. Figures

Placed within text (floated), labeled with arabic numbers.

Caption set below figure. A citation to be set inline, not superscripted.

6.22 Society defaults

After this society file is read in, we will process the `\@journal-` and `\@pointsize-` specific code. Here we define the defaults.

We select **Chaos** as the default journal substyle, because it is the most permissive in terms of bibliography and citation style, and it is formatted in two column in the reprint style.

```
644 \def\@journal@default{cha}%
645 \def\@pointsize@default{12}%
```

6.23 Journal-Specific Code

For AIP journals, we supply code specific to JCP, POP, RSI, JAP, APL, CHA, POF, BMF, RSE, JMP.

6.23.1 jcp

A member of the journal class 1a.

```
646 \def\rtx@aipjcp{%
647 \typeout{Using journal substyle \@journal.}%
```

Journal class 1a uses the (superscript) numerical citation style by default.

```
648 \@booleanfalse\authoryear@sw
```

End of jcp code.

```
649 }%
```

6.23.2 pop

A member of the journal class 1a.

```
650 \def\rtx@aipop{%
651 \typeout{Using journal substyle \@journal.}%
```

Journal class 1a uses the (superscript) numerical citation style by default.

```
652 \@booleanfalse\authoryear@sw
```

End of pop code.

```
653 }%
```

6.23.3 rsi

A member of the journal class 1a.

```
654 \def\rtx@aiprsi{%
655 \typeout{Using journal substyle \@journal.}%
```

Journal class 1a uses the (superscript) numerical citation style by default.

```
656 \@booleanfalse\authoryear@sw
```

End of rsi code.

```
657 }%
```

6.23.4 jap

Sole member of the journal class 1b.

No running title.

```
658 \def\rtx@aipjap{%
659 \typeout{Using journal substyle \@journal.}%
```

Journal class 1b uses the (superscript) numerical citation style by default.

```
660 \@booleanfalse\authoryear@sw
661 \let\@runningtitle\@empty
```

End of jap code.

```
662 }%
```

6.23.5 apl

Sole member of the journal class 2.

No running title.

```
663 \def\rtx@aipapl{%
664 \typeout{Using journal substyle \@journal.}%
```

Journal class 2 uses the (superscript) numerical citation style by default.

```
665 \@booleanfalse\authoryear@sw
666 \let\@runningtitle\@empty

End of apl code.

```
667 }%
```

6.23.6 cha

Sole member of the journal class 3a.

```
668 \def\rtx@aipcha{%
669 \typeout{Using journal substyle \@journal.}%
```

Article titles are allowed.

```
670 \@booleanfalse\aip@jtitx@sw
```

End of cha code.

```
671 }%
```

6.23.7 pof

Sole member of the journal class 3b.

```
672 \def\rtx@aippof{%
673 \typeout{Using journal substyle \@journal.}%
```

Journal class 3b uses the (superscript) numerical citation style by default. Article titles are required, so we include them if available, but if absent, we can do no more than make a warning in the .blg.

```
674 \@booleanfalse\authoryear@sw
675 \@booleanfalse\aip@jtitx@sw
```

End of pof code.

676 }%

6.23.8 bmf

A member of the journal class 4a, the Biomicrofluidics journal is single column.

677 \def\rtx@aipbmf{%

678 \typeout{Using journal substyle \@journal.}%

Journal class 4a uses the (superscript) numerical citation style by default. Journal is formatted in a single column.

679 \@booleanfalse\authoryear@sw

680 \@booleanfalse\twocolumn@sw

End of bmf code.

681 }%

6.23.9 rse

A member of the journal class 4a.

682 \def\rtx@aiprse{%

683 \typeout{Using journal substyle \@journal.}%

Journal class 4a uses the (superscript) numerical citation style by default.

684 \@booleanfalse\authoryear@sw

End of rse code.

685 }%

6.23.10 jmp

Sole member of the journal class 4b, Journal of Mathematical Physics is single column. For an example of `itemize`, see JMP_122901_1 (48).

686 \def\rtx@aipjmp{%

687 \typeout{Using journal substyle \@journal.}%

Article titles are allowed. Journal is formatted in a single column.

688 \@booleanfalse\aip@jtitx@sw

689 \@booleanfalse\twocolumn@sw

End of jmp code.

690 }%

6.24 Establish AIP Defaults

\footinbib@sw All AIP journals invoke the `footinbib` option.

691 \@booleantrue\footinbib@sw

`\place@bibnumber` We install code that will govern the style in which `\cite` commands are formatted, select the presentation for `\bibitems` and control the \LaTeX processing.

`\@bibstyle` Note that a journal substyle may override these settings. Likewise, document preamble may itself invoke `\bibpunct` or `\bibliographystyle`, thereby overriding these settings and those of the journal substyle.

`\bibpunct` The numbered citations of `aipnum` and `aipauthnum` are compatible with `footinbib` and the compression and coalescing features of `natbib`, while `aipauth`'s author-year citations are not. Therefore, we de-select such options if we are selecting author-year citations.

The numbered citations of `aipnum` and `aipauthnum` are compatible with `footinbib` and the compression and coalescing features of `natbib`, while `aipauth`'s author-year citations are not. Therefore, we de-select such options if we are selecting author-year citations.

Note on `natbib` presets: `aipnum` and `aipauthnum` uses the Chicago `\bibpunct` style; while `aipauth` uses that of Nature.

Note on `\NAT@mcite`: if not using numerical citations, we set `\NAT@mcite` to a lower value, to turn off the `mcite` semantics of `natbib`.

```
