May 7, 2010

07.02.08   *– Version:* 1.0 *–*   *Contributor:* Michael Kohlhase

> made initiale version 1.0 (empty skeleton file)

07.03.08   *– Version:* 1.1 *–*   *Contributor:* Michael Kohlhase

> added two requirements

12.05.08   *– Version:* 1.2 *–*   *Contributor:* Michael Kohlhase

> simplified some formulations

17.05.08   *– Version:* 1.3 *–*   *Contributor:* Michael Kohlhase

> added third requirement that depends on the first two.

Certification

12.02.08   *– Version:* 1.1 *–*   *Certifier:* Michael Kohlhase
New State: **needs work**

> some formulations still unclear, but correct in principle

15.05.08   *– Version:* 1.2 *–*   *Certifier:* John Doe
New State: **at DFKI**

> may need another requirement.

19.02.08   *– Version:* 1.3 *–*   *Certifier:* John Doe
New State: **at DFKI**

> certified: this is what DFKI wants.

1   Introduction

In this document we show how to use the `reqdoc` package, unfortauntely, the requirements themselves are quite phony, since they are only for introductory purposes.

2   Some Requirements

U1:   (Priority: 2) Accept data from heterogeneous data sources
Note: in particular: $DATA$

U2:   (Priority: 1) do something with the data to test the reference
Note: not really, this is just a test

U3:   (Priority: 1) do something with the data to test the reference
Note: not really, this is just a test   [from 1,2]

3   Requirements as tables

We can also format requirements as tables

#	Prio	Requirement	Notes	Refs
U1	2	Accept data from heterogeneous data sources	in particular: $DATA$	
U2	1	do something with the data to test the reference do something with the data to test the reference	not really, this is just a test	
U3	1	do something with the data to test the reference	not really, this is just a test	1,2

4   Conclusion

See, it was quite simple
