

# The **flushend** package

Sigitas Tolušis  
`sigitas@vtex.lt`

v2.0 from 2014/03/03

## 1 Introduction

The package is used to balance columns on any page in twocolumn mode. By default it is switched on at the end of document. It is expected to work with footnotes, top floats and column break before one line section title.

## 2 Usage

Just load the package to balance the last page: that's all. To balance some page in middle of document use command `\flushcolsend` at that page.

`\flushend`

This macro switches on column balancing on the last page. It is used by default.

`\raggedend`

This macro switches off column balancing on the last page.

`\flushcolsend`

This macro switches on column balancing on the current page.

`\raggedcolsend`

This macro switches off column balancing on the current page.

`\atColsBreak`

$\{\langle tokens \rangle\}$  Adds  $\langle tokens \rangle$  in place of the original column break (made without balancing).

*Example:* `\atColsBreak{\vskip-2pt}`

`\atColsEnd`

$\{\langle tokens \rangle\}$  Adds  $\langle tokens \rangle$  at the end of right column.

*Example:* `\atColsEnd{\vfill}`

`\showcolsendrule`

It can be used just for debugging: adds rule to the bottom of columns.

## 2.1 Package options

- autobase** It is used to guess \baselineskip value on original columns break.
- noauto** It is used to switch off the previous option behaviour.
- debug** Adds rules to the bottom of columns (just for debugging) and leftcolumn break place. Adds some additional log info.

To get more or less proper result we need to know about footnotes at the left column end, top floats at the right column top, skips and so on. This part of the package is responsible for such analysis.
