

The `stfloats` package

Sigitas Tolušis
`sigitas@vtex.lt`

v2.0 from 2016/02/08

1 Introduction

The package improves `dblfloat(s)` and footnotes placements mechanism and `baselineskip` glue settings.

With newer `LATEX` release from 2015/01/01 using this package two improvements are available out of the box:

1. Float output keeps order for the same type of floats even with top or bottom `dblfloat` items.
2. `Dblfloats` will appear on the same page where they are defined if they are defined on left column and enough free place is available on the current column/page.

2 Usage

To place `dblfloat(s)` on top or bottom of the page just use optional `[t]` or `[b]`.
Example (to place figure at the page bottom):

```
\begin{figure*}[b]  
...  
\end{figure*}
```

<code>\fnbelowfloat</code>	Puts footnotes below the bottom floats
<code>\fnunderfloat</code>	(default and standard) Puts footnotes under the bottom floats.
<code>\setbaselinefloat</code>	Allows <code>\baselineskip</code> to stretch and shrink if the <code>\baselineskip</code> is set internally with command <code>\@setfontsize</code> (<code>\linespread</code> and <code>\fontsize</code> at user level). The settings are calculated and activated with command <code>\selectfont</code> (<code>\size@update</code>).

Example:

```
\@setfontsize\normalsize\@xpt{12pt plus .1pt minus .1pt}\normalsize
```

`\setbaselinefixed` (default and standard) Disables `\baselineskip` to stretch and shrink even if the `\baselineskip` is set with command `\setfontsize` as in the previous example in case that `\baselinestretch` is not empty.

Then line spreading is not used `\baselineskip` glue can be controlled by ordinary `\baselinestretch` definition:

- `\def\baselinestretch{1}` - removes `\baselineskip` glue.
- `\def\baselinestretch{}` - keeps `\baselineskip` glue.

3 Implementation

`\@dblbotlist` Used for `dblfloat(s)` to be placed at the page bottom.

```
1 \gdef\@dblbotlist{}
```

Additional counters for `dblfloat(s)` support at the page bottom.

```
2 \newcount\@dblbotnum
3 \newcount\c@dblbotnumber
4 \setcounter{dblbotnumber}{2}
```

`\@dbflt` With extended set of default args: `[tp]` -> `[tbp]`

```
5 \def\@dbflt#1{\ifnextchar[{\xdblfloat{#1}}{\xdblfloat{#1}[tbp]}}
```

`\@dblfloatplacement` With adds to support `dblfloat(s)` placement at the page bottom. From L^AT_EX release 2015/01/01 `\f@depth` is used in `\@testwrongwidth` to look for either column or `dblcolumn` floats. A value of 1sp signals the latter.

```
6 \def \@dblfloatplacement {%
7   \global \@dbltopnum \c@dbltopnumber
8   \global \@dblbotnum \c@dblbotnumber
9   \global \@dbltoproom \dbltopfraction\@colht
10  \@textmin \@colht
11  \advance \@textmin -\@dbltoproom
12  \@fpmin \dblfloatpagefraction\textheight
13  \@fptop \@dblfpsep
14  \@fpsep \@dblfpsep
15  \@fpbot \@dblfpbot
16  \def\f@depth{1sp}%
17 }
```

`\if@before@latex@release` This conditional code is used to check the L^AT_EX release age.

```
18 \newif\if@before@latex@release
19 \def\tmp@reserved@a#1/#2/#3\@nil{%
20   \ifnum#1<2015\relax
21     \@before@latex@releasetrue
22   \else
23     \@before@latex@releasefalse
24   \fi
25 }
26 \expandafter\tmp@reserved@a\fmtversion\@nil
```

L^AT_EX release version before 2015/01/01 support goes here.

`\@addtodblcol` With adds to support dblfloat(s) placement at the page bottom.

```

\fnbelowfloat Switch to put footnotes below the bottom floats.

```
538 \def\fnbelowfloat{\global\let\@makecol\fn@makecol}
```

`\fnunderfloat` Switch to put footnotes under the bottom floats.
539 `\def\fnunderfloat{\global\let\@makecol\org@makecol}`

`\set@floatfontsize` Such definition `\baselineskip\@linespread\baselineskip` removes any glue from the `\baselineskip` in the case `\@linespread` is not empty. To prevent this `\size@update` is redefined.
540 `\def\set@floatfontsize#1#2#3{%`
541 `\@defaultunits\@tempdimb#2pt\relax\@nnil`
542 `\edef\@size{\strip@pt\@tempdimb}%`
543 `\@defaultunits\@tempkipa#3pt\relax\@nnil`
544 `\edef\@baselineskip{\the\@tempkipa}%`
545 `\edef\@linespread{#1}%`
546 `\let\baselinestretch\@linespread`
547 `\def\size@update{%`
Saving of the `\baselineskip` glue.
548 `\baselineskip\@baselineskip`
549 `\@tempkipa\baselineskip\relax\baselineskip=1\baselineskip`
550 `\advance\@tempkipa by-\baselineskip\baselineskip\@baselineskip`
Removes the `\baselineskip` glue in case `\@linespread` not empty.
551 `\baselineskip\@linespread\baselineskip`
Restoring of the `\baselineskip` glue.
552 `\advance\@tempkipa by\baselineskip\baselineskip\@tempkipa`
553 `\normalbaselineskip\baselineskip`
554 `\setbox\strutbox\hbox{%`
555 `\vrule\@height.7\baselineskip`
556 `\@depth.3\baselineskip`
557 `\@width\z@}%`
558 `\let\size@update\relax`
559 `}%`
560 `}`

Simple copy of the previous original `\set@fontsize` definition in `\set@@@fontsize`.
561 `\let\set@@@fontsize\set@fontsize`

`\setbaselinefloat` It allows `\baselineskip` to be set to the value with glue.
562 `\def\setbaselinefloat{\let\set@fontsize\set@floatfontsize}`

`\setbaselinefixed` It is used to restore macro definition `\set@fontsize` to the original one. It means that `\baselineskip` is set to the value without glue in the case `\baselinestretch` is not empty.
563 `\def\setbaselinefixed{%`
564 `\@tempdima=\baselinestretch\p@`
565 `\edef\baselinestretch{\strip@pt\@tempdima}%`
566 `\let\set@fontsize\set@@@fontsize`
567 `}`

`\output` It is removed from this package as the duplicate of the same definition in kernel since the macro definition change v.1.2c at 1997/11/09 in `ltoutput`.

568 `%\endinput`
