

The **thumbs** package

H.-Martin Münch
<Martin.Muench at Uni-Bonn.de>

2011/06/24 v1.0g

Abstract

This L^AT_EX package allows to create one or more customizable thumb index(es), providing a quick and easy reference methode for large documents. It must be loaded after the page size has been set, when printing the document “shrink to page” should not be used, and a printer capable of printing up to the border of the sheet of paper is needed (or afterwards cutting the paper).

1 Introduction

This package puts running, customizable thumb marks in the outer margin, moving downward as the chapter number (or whatever shall be marked by the thumb marks) increases. Additionally an overview page/table of thumb marks can be added automatically, which gives the respective names of the thumbed objects, the page where the object/thumb mark first appears, and the thumb mark itself at the respective position. The thumb marks are probably useful for documents, where a quick and easy way to find e.g. a chapter is needed, for example in reference guides, anthologies, or quite large documents.

`thumbs` must be loaded after the page size has been set, when printing the document “shrink to page” should not be used, a printer capable of printing up to the border of the sheet of paper is needed (or afterwards cutting the paper).

Usage with `\usepackage[landscape]{geometry}`, `\documentclass[landscape]{...}`, `\usepackage[landscape]{geometry}`, `\usepackage{lscape}`, or `\usepackage{pdflscape}` is possible.

There are already some packages for creating thumbs, but because none of them did what I wanted, I wrote this new package.¹

2 Usage

2.1 Loading

Load the package placing

```
\usepackage[<options>]{thumbs}
```

in the preamble of your L^AT_EX 2 _{ε} source file.

The `thumbs` package takes the dimensions of the page `\AtBeginDocument` and does not react to changes afterwards. Therefore this package must be loaded *after* the page dimensions have been set, e.g. with package `geometry` (<http://ctan.org/pkg/geometry>). Of course it is also OK to just keep the default page/paper settings, but when anything is changed, it must be done before `thumbs` executes its `\AtBeginDocument` code.

The format of the paper, where the document shall be printed upon, should also be used for creating the document. Then the document can be printed without adapting the size, like e.g. “shrink to page”. That would add a white border around the document and by moving the thumb marks from the edge of the paper they no longer appear at the side of the stack of

¹Probably this holds true for the motivation of the authors of quite a lot of packages.

paper. (Therefore e.g. for printing the example file to A4 paper it is necessary to add `a4paper` option to the document class and recompile it! Then the thumb marks column change will occur at another point, of course.) It is also necessary to use a printer capable of printing up to the border of the sheet of paper. Alternatively it is possible after the printing to cut the paper to the right size. While performing this manually is probably quite cumbersome, printing houses use paper, which is slightly larger than the desired format, and afterwards cut it to format.

Some faulty pdf-viewer adds a white line at the bottom and right side of the document when presenting it. This does not change the printed version. To test for this problem, a page of the example file has been completely coloured. (Probably better exclude that page from printing...)

When using the thumb marks overview page, it is necessary to `\protect` entries like `\pi` (same as with entries in tables of contents, figures, tables,...).

2.2 Options

`options` The `thumbs` package takes the following options:

2.2.1 pagecolor

`pagecolor` Option `pagecolor` wants to know the background colour of the pages for use with the `xcolor` package. The default value is `white`.

2.2.2 linefill

`linefill` Option `linefill` wants to know how the line between object (e.g. chapter name) and page number shall be filled at the overview page. Empty option will result in a blank line, `line` will fill the distance with a line, `dots` will fill the distance with dots.

2.2.3 minheight

`minheight` Option `minheight` wants to know the minimal vertical extension of each thumb mark. This is only useful in combination with option `height=auto` (see below). When the height is automatically calculated and smaller than the `minheight` value, the height is set equal to the given `minheight` value and a new column/page of thumb marks is used. The default value is 47pt ($\approx 16.5 \text{ mm} \approx 0.65 \text{ in}$).

2.2.4 height

`height` Option `height` wants to know the vertical extension of each thumb mark. The default value “`auto`” calculates an appropriate value automatically decreasing with increasing number of thumb marks (but fixed for each document). When the height is smaller than `minheight`, this package deems this as too small and instead uses a new column/page of thumb marks. If smaller thumb marks are really wanted, choose a smaller `minheight` (e.g. 0pt).

2.2.5 width

`width` Option `width` wants to know the horizontal extension of each thumb mark. The default option-value “`auto`” calculates a width-value automatically: (`\paperwidth` minus `\textwidth`), which is the total width of inner and outer margin, divided by 4. Instead of this, any positive width given by the user is accepted. (Try `width={\paperwidth}` in the example!) Option `width={autoauto}` leads to thumb marks, which are just wide enough to fit the widest thumb mark text.

2.2.6 distance

`distance` Option `distance` wants to know the vertical spacing between two thumb marks. The default value is 2 mm.

2.2.7 tophumbmargin

`topthumbmargin` Option `topthumbmargin` wants to know the vertical spacing between the upper page (paper) border and top thumb mark. The default (`auto`) is 1 inch plus `\th@mbsvoffset` plus `\topmargin`. Dimensions (e.g. 1 cm) are also accepted.

2.2.8 bottomthumbmargin

`bottomthumbmargin` Option `bottomthumbmargin` wants to know the vertical spacing between the lower page (paper) border and last thumb mark. The default (`auto`) for the position of the last thumb is
`1in+\topmargin-\th@mbsdistance+\th@mbheight+\headheight+\headsep+\textheight+\footskip-\th@mbsdistance-\th@mbheight.`
Dimensions (e.g. 1 cm) are also accepted.

2.2.9 thumblink

`thumblink` Option `thumblink` determines, what is hyperlinked at the thumb marks overview page (when the `hyperref` package is used):

- `none` creates *none* hyperlinks
- `title` hyperlinks the *titles* of the thumb marks
- `page` hyperlinks the *page* numbers of the thumb marks
- `titleandpage` hyperlinks the *title and page* numbers of the thumb marks
- `line` hyperlinks the whole *line*, i. e. title, dots (or line or whatsoever) and page numbers of the thumb marks
- `rule` hyperlinks the whole *rule*.

2.2.10 ignorehoffset, ignorevoffset

`ignorehoffset` `ignorevoffset` Usually `\hoffset` and `\voffset` should be regarded, but moving the thumb marks away from the paper edge probably makes them useless. Therefore `\hoffset` and `\voffset` are ignored by default, or when option `ignorehoffset` or `ignorehoffset=true` is used (and `ignorevoffset` or `ignorevoffset=true`, respectively). But in case that the user wants to print at one sort of paper but later trim it to another one, regarding the offsets would be necessary. Therefore `ignorehoffset=false` and `ignorevoffset=false` can be used to regard these offsets. (Combinations `ignorehoffset=true`, `ignorevoffset=false` and `ignorehoffset=false`, `ignorevoffset=true` are also possible.)

2.2.11 verbose

`verbose` Option `verbose=false` (the default) suppresses some messages, which otherwise are presented at the screen and written into the log file. Look for
***** THUMB dimensions *****
in the log file for height and width of the thumb marks as well as top and bottom thumb marks margins.

2.2.12 draft

`draft` Option `draft` (*not* the default) sets the thumb mark width to 2pt, thumb mark text colour to black and thumb mark background colour to gray. Either do not use this option with the `thumbs` package at all, or use `draft=false`, or `final`, or `final=true` to get the original appearance of the thumb marks.

2.3 Commands to be used in the document

2.3.1 \addthumb

`\addthumb` To add a thumb mark, use the `\addthumb` command, which has these four parameters:

1. a title for the thumb mark (for the thumb marks overview page, e.g. the chapter title),
2. the text to be displayed in the thumb mark (for example the chapter number: `\thechapter`),
3. the colour of the text in the thumb mark,
4. and the background colour of the thumb mark

(parameters in this order) at the page where you want this thumb mark placed (for the first time).

2.3.2 \addtitlethumb

`\addtitlethumb` When a thumb mark shall not or cannot be placed on a page, e.g. at the title page or when using `\includepdf` from `pdffpages` package, but the reference in the thumb marks overview nevertheless shall name that page number and hyperlink to that page, `\addtitlethumb` can be used at the following page. It has five arguments. The arguments one to four are identical to the ones of `\addthumb` (see above), and the fifth argument consists of the label of the page, where the hyperlink at the thumb marks overview page shall link to. The `thumbs` package does *not* create that label! But for the first page the label `pagesLTS.0` can be used, which is already placed there by the used `pagesLTS` package.

2.3.3 \stophumb and \continuethumb

`\stophumb` When a page (or pages) shall have no thumb marks, use the `\stophumb` command (without parameters). Placing another thumb mark with `\addthumb` or `\addtitlethumb` or using the command `\continuethumb` continues the thumb marks.
`\continuethumb`

2.3.4 \thumbsoverview

\thumbsoverview The command \thumbsoverview is used to place the overview page(s) for the thumb marks. Its single parameter is used to mark this page/these pages (e.g. in the page header). If these marks are not wished, \thumbsoverview{} will generate empty marks in the page header(s). \thumbsoverview can be used more than once (for example at the beginning and at the end of the document). The overviews have labels TableOfThumbs1, TableOfThumbs2, and so on, which can be referred to with e.g. \pageref{TableOfThumbs1}. The reference TableOfThumbs (without number) aims at the last used Table of Thumbs (for compatibility with older versions of this package).

2.3.5 \thumbnewcolumn

\thumbnewcolumn With the command \thumbnewcolumn a new column can be started, even if the current one was not filled. This could be useful e.g. for a dictionary, which uses one column for translations from language A to language B, and the second column for translations from language B to language A. But in that case one probably should increase the size of the thumb marks, so that 26 thumb marks (in case of the latin alphabet) fill one thumb column. Do not use \thumbnewcolumn on a page where \addthumb was already used, but use \addthumb immediately after \thumbnewcolumn.

2.3.6 \addthumbsoverviewtocontents

\thumbsoverviewtocontents \addthumbsoverviewtocontents with two arguments is a replacement for \addcontentsline{toc}{<level>}{<text>}, where the first argument of \addthumbsoverviewtocontents is for <level> and the second for <text>. If an entry of the thumbs mark overview shall be placed in the table of contents, \addthumbsoverviewtocontents with its arguments should be used immediately before \thumbsoverview.

3 Alternatives

- chapterthumb, 2005/03/10, v0.1, by MARKUS KOHM, available at
<http://mirror.ctan.org/info/examples/KOMA-Script-3/Anhang-B/source/chapterthumb.sty>;
unfortunately without documentation, which is probably available in the book:
Kohm, M., & Morawski, J.-U. (2008): KOMA-Script. Eine Sammlung von Klassen und Paketen für L^AT_EX2e, 3., überarbeitete und erweiterte Auflage für KOMA-Script 3, Lehmanns Media, Berlin, Edition dante, ISBN-13: 978-3-86541-291-1, <http://www.lob.de/isbn/3865412912>; in German.
- eso-pic, 2010/10/06, v2.0c by ROLF NIEPRASCHK, available at <http://www.ctan.org/pkg/eso-pic>, was suggested as alternative. If I understood its code right, `\AtBeginShipout{\AtBeginShipoutUpperLeft{\put(...}}` is used there, too. Thus I do not see its advantage. Additionally, while compiling the `eso-pic` test documents with T_EXLive2010 worked, compiling them with *Scientific WorkPlace* 5.50 Build 2960 (© MacKichan Software, Inc.) led to significant deviations of the placements (also changing from one page to the other).
- fancytabs, 2011/04/16 v1.1, by RAPHAËL PINSON, available at <http://www.ctan.org/pkg/fancytabs>, but requires TikZ from the `pgf` bundle.
- thumb, 2001, without file version, by INGO KLÖCKEL, available at
<ftp://ftp.dante.de/pub/tex/info/examples/ltt/thumb.sty>, unfortunately without documentation, which is probably available in the book:
Klöckel, I. (2001): L^AT_EX2e. Tips und Tricks, Dpunkt.Verlag GmbH, ISBN-13: 978-3-93258-837-2; in German.
- thumb (a completely different one), 1997/12/24, v1.0, by CHRISTIAN HOLM, available at
<http://www.ctan.org/pkg/thumb>.
- thumbindex, 2009/12/13, without file version, by HISASHI MORITA, available at
<http://hisashim.org/2009/12/13/thumbindex.html>.
- thumb-index, from the `fancyhdr` package, 2005/03/22 v3.2, by PIET VAN OOSTRUM, available at
<http://www.ctan.org/pkg/fancyhdr>.
- thumbpdf, 2010/07/07, v3.11, by HEIKO OBERDIEK, is for creating thumbnails in a pdf document, not thumb marks (and therefore *no* alternative); available at <http://www.ctan.org/pkg/thumbpdf>.
- thumby, 2010/01/14, v0.1, by SERGEY GOLDGABER, “is designed to work with the `memoir` class, and also requires PerlT_EX and `tikz`” (<http://www.ctan.org/pkg/thumby>), available at <http://www.ctan.org/pkg/thumby>.

(You programmed or found another alternative, which is available at CTAN:?

OK, send an e-mail to me with the name, location at CTAN:, and a short notice, and I will probably include it in the list above.)

29 \gdef\unit#1{\mathord{\thinspace\mathrel{\mathop{\rm thinspace}\nolimits}\mathord{\mathit{#1}}}}%
30 \listfiles
31 \begin{document}
32 \begin{arabic}
33 \section*{Example for thumbs}
34 \addcontentsline{toc}{section}{Example for thumbs}
35 \markboth{Example for thumbs}{Example for thumbs}
36 \end{arabic}
37 This example demonstrates the most common uses of package
38 \textsf{thumbs}, v1.0g as of 2011/06/24 (HMM).
39 The used options were \texttt{pagecolor=white},
40 \texttt{thumblink=rule}, \texttt{linefill=dots},
41 \texttt{height=auto}, \texttt{minheight=\{47pt\}},
42 \texttt{width=auto}, \texttt{distance=\{2mm\}}, \texttt{topthumbmargin=\{auto\}},
43 \texttt{bottomthumbmargin=\{auto\}}, \texttt{ignorehoffset=true},
```

```

46 \texttt{ignorerevoffset=true}, and \texttt{verbose=true}.
47
48 \noindent These are the default options, except \texttt{verbose=true}.
49 For more details please see the documentation!\newline
50
51 \textbf{Hyperlinks or not:} If the \textsf{hyperref} package is loaded,
52 the references in the overview page for the thumb marks are also hyperlinked
53 (except when option \texttt{thumblink=none} is used).\newline
54
55 \bigskip
56
57 {\color{green} Save per page about $200\unit{ml}$ water, $2\unit{g}$ CO$_2$}
58 and $2\unit{g}$ wood:\newline
59 Therefore please print only if this is really necessary.}\newline
60
61 \bigskip
62
63 \textbf{%
64 For testing purpose page \pageref{greenpage} has been completely coloured!
65 \newline
66 Better exclude it from printing\ldots \newline}
67
68 \bigskip
69
70 Some thumb mark texts are too large for the thumb mark (especially when the
71 paper size and therefore also the thumb mark size is decreased).
72 When option \texttt{width=\{autoauto\}} would be used,
73 the thumb mark width would be automatically increased.
74
75 \bigskip
76
77 For printing this example to another format of paper (e.\,g. A4)
78 it is necessary to add the according option (e.\,g. \verb|a4paper|)
79 to the document class and recompile it! (In that case the
80 thumb marks column change will occur at another point, of course.)
81 With paper format equal to document format the document can be printed
82 without adapting the size, like e.\,g.
83 \textquotedblleft shrink to page\textquotedblright .
84 That would add a white border around the document
85 and by moving the thumb marks from the edge of the paper they no longer appear
86 at the side of the stack of paper. It is also necessary to use a printer
87 capable of printing up to the border of the sheet of paper. Alternatively
88 it is possible after the printing to cut the paper to the right size.
89 While performing this manually is probably quite cumbersome,
90 printing houses use paper, which is slightly larger than the
91 desired format, and afterwards cut it to format.
92

```

```

93 \newpage
94
95 \addtitlethumb{Frontmatter}{0}{white}{gray}{pagesLTS.0}
96
97 At the first page no thumb mark was used, but we want to begin with thumb marks
98 at the first page, therefore a
99 \begin{verbatim}
100 \addtitlethumb{Frontmatter}{0}{white}{gray}{pagesLTS.0}
101 \end{verbatim}
102 was used at the beginning of this page.
103
104 \newpage
105
106 \tableofcontents
107
108 \newpage
109
110 To include an overview page for the thumb marks,
111 \begin{verbatim}
112 \addthumbsoverviewtocontents{section}{Thumb marks overview}%
113 \thumboverview{Table of Thumbs}
114 \end{verbatim}
115 is used, where \textbackslash addthumbsoverviewtocontents adds the thumb
116 marks overview page to the table of contents.
117
118 \addthumbsoverviewtocontents{section}{Thumb marks overview}%
119 \thumboverview{Table of Thumbs}
120
121 That were the overview pages for the thumb marks.
122
123 \newpage
124
125 \section{The first section}
126 \addthumb{First section}{\space\Huge{\textbf{$1^{\text{st}}$}}}{yellow}{green}
127
128 \begin{verbatim}
129 \addthumb{First section}{\space\Huge{\textbf{$1^{\text{st}}$}}}{yellow}{green}
130 \end{verbatim}
131
132 A thumb mark is added for this section. The parameters are: title for the thumb mark,
133 the text to be displayed in the thumb mark (choose your own format),
134 the colour of the text in the thumb mark,
135 and the background colour of the thumb mark (parameters in this order).\newline
136
137 Now for some pages of \textquotedblleft content\textquotedblright\ldots
138
139 \newpage

```

```

140 \lipsum[1]
141 \newpage
142 \lipsum[1]
143 \newpage
144 \lipsum[1]
145 \newpage
146
147 \section{The second section}
148 \addthumb{Second section}{\Huge{\textbf{\arabic{section}}}}{green}{yellow}
149
150 For this section, the text to be displayed in the thumb mark was set to
151 \begin{verbatim}
152 \Huge{\textbf{\arabic{section}}}
153 \end{verbatim}
154 i.e. the number of the section will be displayed (huge & bold).\newline
155
156 Let us change the thumb mark on a page with an even number:
157
158 \newpage
159
160 \section{The third section}
161 \addthumb{Third section}{\Huge{\textbf{\arabic{section}}}}{blue}{red}
162
163 No problem!
164
165 And you do not need to have a section to add a thumb:
166
167 \newpage
168
169 \addthumb{Still third section}{\Huge{\textbf{\arabic{section}b}}}{red}{blue}
170
171 This is still the third section, but there is a new thumb mark.
172
173 On the other hand, you can even get rid of the the thumb marks
174 for some page(s):
175
176 \newpage
177
178 \stopthumb
179
180 The command
181 \begin{verbatim}
182 \stopthumb
183 \end{verbatim}
184 was used here. Until another addthumb (with parameters) or
185 \begin{verbatim}
186 \continuethumb

```

```

187 \end{verbatim}
188 is used, there will be no more thumb marks.
189
190 \newpage
191
192 Still no thumb marks.
193
194 \newpage
195
196 Still no thumb marks.
197
198 \newpage

252
253 It is probably a good idea to have a look at the \textsf{xcolor} package
254 and use other colours than used in this example.
255
256 (About automatically increasing the thumb mark width to the thumb mark text
257 width please see the note at page^{\pageref{HugeText}.})
258
259 \newpage
260
261 \addthumb{A mark}{\Huge{\textbf{A}}}{lime}{darkgray}
262
263 I just need to add further thumb marks to get them reaching the bottom of the page.
264
265 Generally the vertical size of the thumb marks is set to the value given in the
266 height option. If it is \texttt{auto}, the size of the thumb marks is decreased,
267 so that they fit all on one page. But when they get smaller than \texttt{minheight},
268 instead of decreasing their size further, a new thumbs column is started
269 (which will happen here).
270

339 Some faulty pdf-viewer sometimes (for the same document!)
340 adds a white line at the bottom and right side of the document
341 when presenting it. This does not change the printed version.
342 To test for this problem, this page has been completely coloured.
343 (Probably better exclude this page from printing\ldots{})
344
345 \textsc{Heiko Oberdiek} wrote at Tue, 26 Apr 2011 14:13:29 +0200
346 in the \newline
347 comp.text.tex newsgroup (see e.\,g. \newline
348 \url{http://groups.google.com/group/de.comp.text.tex/msg/b3aea4a60e1c3737}): \newline
349 \textquotedblleft Der Ursprung ist 0 0,
350 da gibt es nicht viel zu runden; bei den anderen Seiten
351 werden pt als bp in die PDF-Datei geschrieben, d.h.
352 der Balken ist um 72.27/72 zu gro\ss{}, das
353 sollte auch Rundungsfehler abdecken.\textquotedblright
354
355 (The origin is 0 0, there is not much to be rounded;
356 for the other sides the \$\unit{pt}\$ are written as \$\unit{bp}\$ into
357 the pdf-file, i.\,e. the rule is too large by \$72.27/72\$, which
358 should cover also rounding errors.)
359
360 The thumb marks are also too large - on purpose! This has been done
361 to assure, that they cover the page up to its (paper) border,
362 therefore they are placed a little bit over the paper margin.
363
364 Now I red somewhere in the net (should have remembered to note the url),
365 that white margins are presented, whenever there is some object outside
366 of the page. Thus, it is a feature, not a bug?!
367 What I do not understand: The same version of the viewer (at same operating
368 system) at one PC shows white margins, and at another one does not. Strange.
369 Even stranger: The same document sometimes is presented with white lines
370 and sometimes without.\newline
371 But at least it does not influence the printed version.

377 It is possible to use the Table of Thumbs more than once (for example
378 at the beginning and the end of the document) and to refer to them via e.\,g.
379 \verb|\pageref{TableOfThumbs1}, \pageref{TableOfThumbs2}|,... ,
380 here: page \pageref{TableOfThumbs1}, page \pageref{TableOfThumbs2},
381 and via e.\,g. \verb|\pageref{TableOfThumbs}| it is referred to the last used
382 Table of Thumbs (for compatibility with older package versions).
383 If there is only one Table of Thumbs, this one is also the last one, of course.
384 Here it is at page \pageref{TableOfThumbs}.
385
386 \thumsoverview{Table of Thumbs again}
387
388 \end{document}
389 </example>
```

5 The implementation

We start off by checking that we are loading into L^AT_EX 2_E and announcing the name and version of this package.

```
390 {*package}
391 \NeedsTeXFormat{LaTeX2e}[2009/09/24]
392 \ProvidesPackage{thumbs}[2011/06/24 v1.0g
393     Thumb marks and overview page(s) (HMM)]
394
```

A short description of the thumbs package:

```
395 %% This package allows to create a customizable thumb index,
396 %% providing a quick and easy reference methode for large documents,
397 %% as well as an overview page.
398
```

For SW(P) users, we issue a warning. Unfortunately, we cannot check for the used software (can we?), and there will be a stack overflow when using `hyperref` even before the `thumbs` package is loaded, thus the warning might not even reach the users. (Thus: Read the manual of the `thumbs` package!) The options for those packages might be changed by the user – I did not test all available options, thus first test, whether the document can be compiled with these options, and then try to change them according to your whishes.

```
399 \message{^^J *** Compiling with SW(P)? ^^J%
400 Please see the sw(p)*.log or \jobname.log-file! *** ^^J}
401 \PackageWarningNoLine{thumbs}{%
402 When compiling with SWP 5.50 Build 2960\MessageBreak%
403 (\copyright\ MacKichan Software, Inc.),\MessageBreak%
404 these additional packages are needed:\MessageBreak%
405 \string\usepackage[T1]{fontenc}\MessageBreak%
406 \string\usepackage{amsfonts}\MessageBreak%
407 \string\usepackage[math]{cellspace}\MessageBreak%
408 \string\usepackage{xcolor}\MessageBreak%
409 \string\pagecolor{white}\MessageBreak%
410 especially before hyperref and thumbs,\MessageBreak%
411 but best right after the \string\documentclass!\MessageBreak%
412 }
413
```

For the handling of the options we need the `kvoptions` package of HEIKO OBERDIEK (see subsection 6.1):

```
414 \RequirePackage{kvoptions}[2010/12/23]% v3.10
```

as well as some other packages:

```
415 \RequirePackage{atbegshi}[2011/01/30]% v1.15
416 \RequirePackage{xcolor}[2007/01/21]% v2.11
417 \RequirePackage{picture}[2009/10/11]% v1.3
418 \RequirePackage{alphalph}[2010/04/18]% v2.3
```

For the total number of the current page we need the `pagesLTS` package of myself (see subsection 6.1). It also loads the `undolabl` package, which is needed for `\overridelabel`:

```
419 \RequirePackage{pagesLTS}[2011/03/17]%
420 \RequirePackage{rerunfilecheck}[2011/04/15]%
421 \RequirePackage{infwarerr}[2010/04/08]%
422 \RequirePackage{atveryend}[2011/04/23]%
```

A last information for the user:

```
423 %% thumbs may work with earlier versions of LaTeX2e and those packages,
424 %% but this was not tested. Please consider updating your LaTeX contribution
425 %% and packages to the most recent version (if they are not already the most
426 %% recent version).
427
```

See subsection 6.1 about how to get them.

The options are introduced:

```
428 \SetupKeyvalOptions{family=thumbs,prefix=thumbs@}
429 \DeclareStringOption[white]{pagecolor}[white]%
430 \DeclareStringOption[linefill][dots]
431 \DeclareStringOption[rule]{thumblink}[rule]
432 \DeclareStringOption[47pt]{minheight}[47pt]
433 \DeclareStringOption[height][auto]
434 \DeclareStringOption[width][auto]
435 \DeclareStringOption[distance][2mm]
436 \DeclareStringOption[topthumbmargin][auto]
437 \DeclareStringOption[bottomthumbmargin][auto]
438 \DeclareBoolOption[true]{ignorehoffset}
439 \DeclareBoolOption[true]{ignorevoffset}
440 \DeclareBoolOption[true]{verbose}
441 \DeclareComplementaryOption[silent]{verbose}
442 \DeclareBoolOption[draft]
443 \DeclareComplementaryOption[final]{draft}
444
445 \ProcessKeyvalOptions*
```

446

ignorehoffset Usually `\hoffset` and `\voffset` should be regarded, but moving the thumb marks away from the paper edge probably makes them useless. Therefore `\hoffset` and `\voffset` are ignored by default, or when option `ignorehoffset` or `ignorehoffset=true` is used (and `ignorevoffset` or `ignorevoffset=true`, respectively). But in case that the user wants to print at one sort of paper but later trim it to another one, regarding the offsets would be necessary. Therefore `ignorehoffset=false` and `ignorevoffset=false` can be used to regard these offsets. (Combinations `ignorehoffset=true`, `ignorevoffset=false` and `ignorehoffset=false`, `ignorevoffset=true` are also possible.)

```
447 \ifthumbs@ignorehoffset
448   \PackageWarningNoLine{thumbs}{%
449     Option ignorehoffset NOT =false:\MessageBreak%
```

```

450    hoffset will be ignored.\MessageBreak%

588   \advance\th@mbheighty-\th@mbsdistance
589   \advance\th@mbheighty-\th@mbsdistance
590 }
591

```

At the beginning of the document `\AtBeginDocument` is executed. `\th@bmshoffset` and `\th@bmsvoffset` are set again, because `\hoffset` and `\voffset` could have been changed.

```

592 \AtBeginDocument{%
593   \ifthumbs@ignorehoffset
594     \gdef\th@bmshoffset{Opt}
595   \else
596     \gdef\th@bmshoffset{\hoffset}
597   \fi
598   \ifthumbs@ignorevoffset
599     \gdef\th@bmsvoffset{-\voffset}
600   \else
601     \gdef\th@bmsvoffset{\voffset}
602   \fi
603   \global\edef\th@mbpaperwidth{\the\paperwidth}
604   \setlength{\th@mbposyA}{1pt}
605   \ifdim \thumbs@minheight < \th@mbposyA% too small
606     \setlength{\thumbs@minheight}{1pt}
607   \else
608     \ifdim \thumbs@minheight = \th@mbposyA% small, but ok
609     \else
610       \ifdim \thumbs@minheight > \th@mbposyA% ok
611     \else
612       \PackageError{thumbs}{Option minheight has invalid value}{%
613         Please use a number and a length unit (e.g. mm, cm, pt)\MessageBreak%
614         and no space between as value for option minheight\MessageBreak%
615         and include this value+unit combination in curly brackets\MessageBreak%
616         (please see the thumbs-example.tex file).\MessageBreak%
617         When pressing return, minheight will now be set to 47pt.\MessageBreak%

```

```

618      }
619      \setlength{\th@mbheight}{47pt}
620      \fi
621  \fi
622 \fi
623 \setlength{\th@mbposyA}{\th@mbheight}

```

This should be a temporary dimension, but we do not want to waste a `newdimension`, and `\th@mbposyA` is not used here yet and will be set later.

Thumb height `\th@mbheighty` is treated. If the value is empty, it is set to `\th@mbposyA`, which was just defined to be 47 pt (by default, or to the value chosen by the user with package option `minheight={...}`):

```

624 \ifx\th@mbheight\empty%
625   \setlength{\th@mbheighty}{\th@mbposyA}
626 \else
627   \def\th@mbstest{auto}
628   \ifx\th@mbheight\th@mbstest%

```

If it is not empty but `auto`(matic), the value is computed via `\setth@mbheight` (see above).

```
629   \setth@mbheight
```

When the height is smaller than `\th@mbheight` (default: 47 pt), this is too small, and instead a new column/page of thumb marks is used.

```

630   \ifdim \th@mbheighty < \th@mbheight
631     \PackageWarningNoLine{\th@mbheight}{Thumbs not high enough:\MessageBreak%
632       Option height has value 'auto'. For \th@mbheight\space thumbs per page\MessageBreak%
633       this results in a thumb height of \the\th@mbheighty.\MessageBreak%
634       This is lower than the minimal thumb height, \th@mbheight,\MessageBreak%
635       therefore another thumbs column will be opened.\MessageBreak%
636       If you do not want this, choose a smaller value\MessageBreak%
637       for option 'minheight'%}
638   }
639   \setlength{\th@mbheighty}{\z@}
640   \advance\th@mbheighty+\th@mbposyA% = \th@mbheight
641 \fi
642 \else

```

When a value has been given for the thumb marks' height, this fixed value is used.

```

811 \setlength{\th@mbposyA}{\th@mbposy}% \th@mbposyA will change.
812 \setlength{\th@mbposytocyy}{\th@mbposy}% \th@mbposytocyy shall not be changed.
813 }
814

```

`\th@mb@dvance` The internal command `\th@mb@dvance` is used to advance the position of the current thumb by `\th@mbheighty` and `\th@mbdistance`. If the resulting position of the thumb is lower than the `\th@mbposybottom` position (i.e. `\th@mbposy` higher than `\th@mbposybottom`), a new thumb column will be started by the next `\addthumb`, otherwise a blank thumb is created and `\th@mb@dvance` is calling itself again. This loop continues until a new thumb column is ready to be started.

```

815 \newcommand{\th@mb@dvance}{%
816   \advance\th@mbposy+\th@mbheighty%

825   \th@mb@dvance%
826 \fi%
827 }
828

```

\thumbnewcolumn

With the command `\thumbnewcolumn` a new column can be started, even if the current one was not filled. This could be useful e.g. for a dictionary, which uses one column for translations from language A to language B, and the second column for translations from language B to language A. But in that case one probably should increase the size of the thumb marks, so that 26 thumb marks (in case of the latin alphabet) fill one thumb column. Do not use `\thumbnewcolumn` on a page where `\addthumb` was already used, but use `\addthumb` immediately after `\thumbnewcolumn`.

```

829 \newcommand{\thumbnewcolumn}{%
830   \ifx\th@mbtoprint\pagesLTS@one%

```

\addtitlethumb

When a thumb mark shall not or cannot be placed on a page, e.g. at the title page or when using `\includepdf` from `pdffpages` package, but the reference in the thumb marks overview nevertheless shall name that page number and hyperlink to that page, `\addtitlethumb` can be used at the following page. It has five arguments. The arguments one to four are identical to the ones of `\addthumb` (see immediately below), and the fifth argument consists of the label of the page, where the hyperlink at the thumb marks overview page shall link to. For the first page the label `pagesLTS.0` can be use, which is already placed there by the used `pagesLTS` package.

```

852 \newcommand{\addtitlethumb}[5]{%
853   \global\edef\th@mb@titlelabel{\#5}%
854   \addthumb{\#1}{\#2}{\#3}{\#4}%

`\@ifpackageloaded` cannot be used after `\AtBeginDocument`, so here it is not checked for the `hyperref` package, but for its `\Hy@Warning` command. If some other package or user is defining `\Hy@Warning`, `thumbs` will falsely assume, that `hyperref` has been loaded, but by my humble opinion, defining `\Hy@Warning` does not make sense and is bad style (except definition by the `hyperref` package itself, of course). Into the `\jobname.tmb` file a `\thumbcontents` entry is written. If `hyperref` is found, a `\phantomsection` is placed, a label for the thumb mark created, and the `\thumbcontents` entry will be hyperlinked to that label (except when `\addtitlethumb` was used, then the label reported from the user is used – the `thumbs` package does *not* create that label!).

```

897 \@ifundefined{Hy@Warning}{% hyperref not loaded

\thumbs@overview \thumbs@overview is used to place the overview page(s) for the thumb marks. Its parameter is used to mark this page/these
pages (e.g. in the page header). If these marks are not whished, \thumbs@overview{} will generate empty marks in the
page header(s). \thumbs@overview can be used more than once (for example at the beginning and at the end of the
document). The overviews have labels TableOfThumbs1, TableOfThumbs2 and so on, which can be referred to with e.g.
\pageref{TableOfThumbs1}. The reference TableOfThumbs (without number) aims at the last used Table of Thumbs (for
compatibility with older versions of this package).
\thumbs@overview works by calling the internal command \th@mbstest@view (see below), repeating this until all thumb marks
have been processed.

1265 \newcommand{\thumbs@overview}[1]{%

1328 \setcounter{FileLine}{1}%
1329 \setcounter{thumbsstop}{1}%
1330 \addtocounter{thumbsstop}{\th@mbsmax}%

```

We do not want any labels or index or glossary entries confusing the table of thumb marks entries, but the commands must work outside of it:

```

1331 \let\thumbsoriglabel\label%
1332 \let\thumbsorigindex\index%
1333 \let\thumbsorigglossary\glossary%
1334 \let\label@gobble%
1335 \let\index@gobble%
1336 \let\glossary@gobble%

```

```

1337  \@whilenum\value{FileLine}<\value{thumbsstop}\do%
1338  {\if@twoside \cleardoublepage%
1339  \else \clearpage%
1340  \fi%

```

When the `hyperref` package is used, one might like to refer to the thumb overview page(s), therefore a `phantomsection` is added. With or without `hyperref` a label `TableOfThumbs1` (or `TableOfThumbs2` or ...) is placed here. For compatibility with older versions of this package also the label `TableOfThumbs` is created. Equal to older versions it aims at the last used Table of Thumbs, but since version 1.0g **without Error:** Label `TableOfThumbs` multiply defined - thanks to `\overridelabel` from the `undolabl` package (which is automatically loaded by the `pagesLTS` package).

When `\addthumbsoverviewtocontents` was used, the entry is placed into the table of contents.

```

1341  \ifnum\value{FileLine}=1%
1342  \@ifundefined{Hy@Warning}{}{\phantomsection}%
1343  \let\label\thumbsoriglabel%
1344  \ifx\th@mbstable\pagesLTS@one%

1435               \closein\@instreamthumb%

```

And on to the next overview page of thumb marks (if there are so many thumb marks):

```

1437           \addtocounter{th@mblinea}{\th@umbsperpage}%
1438           \addtocounter{th@mblineb}{\th@umbsperpage}%
1439           \setcounter{th@mbs@tmpA}{\th@mbsmax}%
1440           \ifnum \value{th@mblineb}>\value{th@mbs@tmpA}%
1441               \setcounter{th@mblineb}{\value{th@mbs@tmpA}}%
1442               \fi%
1443           }% else

```

When \jobname.tmb was not found, we cannot read from that file, therefore the FileLine is set to thumbsstop, stopping the calling of \th@mbs@vreview in \thumbsoverview. (And we issue a warning, of course).

```

1444           \setcounter{FileLine}{\arabic{thumbsstop}}%
1445           \AtVeryEnd{%
1446               \PackageWarningNoLine{thumbs}{%
1447                   File \jobname.tmb not found.\MessageBreak%
1448                   Rerun to get thumbs overview page(s) right.\MessageBreak%
1449               }%
1450           }%
1451           }%
1452           }%
1453           }%
1454       }%
1455

```

When we are in `draft` mode, the thumb marks are “de-coloured”, their width is reduced, and a warning is given.

```
1456 \let\thumborigaddthumb\addthumb%
1457
1458 \ifthumbs@draft
1459   \setlength{\th@mbwidthx}{2pt}
1460   \renewcommand{\addthumb}[4]{\thumborigaddthumb{#1}{#2}{black}{gray}}
1461   \PackageWarningNoLine{thumbs}{thumbs package in draft mode:\MessageBreak%
1462     Thumb mark width is set to 2pt,\MessageBreak%
1463     thumb mark text colour to black, and\MessageBreak%
1464     thumb mark background colour to gray.\MessageBreak%
1465     Use package option final to get the original values.\MessageBreak%
1466   }
1467 \fi
1468
1469 </package>
```

6 Installation

6.1 Downloads

Everything is available on CTAN:, <http://www.ctan.org/tex-archive/>, but may need additional packages themselves.

`thumbs.dtx` For unpacking the `thumbs.dtx` file and constructing the documentation it is required:

- TeXFormat L^AT_EX 2 _{ε} : <http://www.CTAN.org/>
- document class ltxdoc, 2007/11/11, v2.0u, CTAN:macros/latex/base/ltxdoc.dtx
- package geometry, 2010/09/12, v5.6, CTAN:macros/latex/contrib/geometry/geometry.dtx
- package holtxdoc, 2011/02/04, v0.21, CTAN:macros/latex/contrib/oberdiek/holtxdoc.dtx
- package hypdoc, 2010/03/26, v1.9, CTAN:macros/latex/contrib/oberdiek/hypdoc.dtx

`thumbs.sty` The `thumbs.sty` for L^AT_EX 2 _{ε} (i. e. all documents using the `thumbs` package) requires:

- TeXFormat L^AT_EX 2 _{ε} , <http://www.CTAN.org/>
- package xcolor, 2007/01/21, v2.11, CTAN:macros/latex/contrib/xcolor/xcolor.dtx
- package pagesLTS, 2011/03/17, v1.1o, CTAN:macros/latex/contrib/pageslts/pagesLTS.dtx
- package alphalph, 2010/04/18, v2.3, CTAN:macros/latex/contrib/oberdiek/alphalph.dtx
- package atbegshi, 2011/01/30, v1.15, CTAN:macros/latex/contrib/oberdiek/atbegshi.dtx
- package atveryend, 2011/04/23, v1.7, CTAN:macros/latex/contrib/oberdiek/atveryend.dtx
- package infwarerr, 2010/04/08, v1.3, CTAN:macros/latex/contrib/oberdiek/infwarerr.dtx
- package kvoptions, 2010/12/23, v3.10, CTAN:macros/latex/contrib/oberdiek/kvoptions.dtx
- package picture, 2009/10/11, v1.3, CTAN:macros/latex/contrib/oberdiek/picture.dtx
- package rerunfilecheck, 2011/04/15, v1.7, CTAN:macros/latex/contrib/oberdiek/rerunfilecheck.dtx

`SW/SWP` When compiling with SWP 5.50 Build 2960 (© MacKichan Software, Inc.), these additional packages are needed:

```
\usepackage[T1]{fontenc}
\usepackage{amsfonts}
\usepackage[math]{cellspace}
\usepackage{xcolor}
\pagecolor{white}
```

especially before `hyperref` and `thumbs`, but best right after the `\documentclass!` (The options for those packages might be changed by the user – I did not test all available options, thus first test, whether the document can be compiled with these options, and then try to change them according to your whishes.)

`thumb-example.tex` The `thumb-example.tex` requires the same files as all documents using the `thumbs` package and additionally:

- package `eurosym`, 1998/08/06, v1.1, [CTAN:fonts/eurosym.zip](#)
- package `lipsum`, 2011/04/14, v1.2, [CTAN:macros/latex/contrib/lipsum/lipsum.dtx](#)
- package `hyperref`, 2011/04/17, v6.82g, [CTAN:macros/latex/contrib/hyperref/hyperref.dtx](#)
- package `thumbs`, 2011/06/24, v1.0g, [CTAN:macros/latex/contrib/thumbs/thumbs.dtx](#)
(Well, it is the example file for this package, and because you are reading the documentation for the `thumbs` package, it can be assumed that you already have some version of it – is it the current one?)

`Alternatives` As possible alternatives in section 3 there are listed

- `chapterthumb`, 2005/03/10, v0.1, [CTAN:info/examples/KOMA-Script-3/Anhang-B/source/chapterthumb.sty](#)
- `eso-pic`, 2010/10/06, v2.0c, [CTAN:macros/latex/contrib/eso-pic/eso-pic.dtx](#)
- `fancytabs`, 2011/04/16 v1.1, [CTAN:macros/latex/contrib/fancytabs/fancytabs.dtx](#)
- `thumb`, 2001, without file version, <ftp://ftp.dante.de/pub/tex/info/examples/ltt/thumb.sty>
- `thumb` (a completely different one), 1997/12/24, v1.0, [CTAN:macros/latex/contrib/thumb/thumb.dtx](#)
- `thumbindex`, 2009/12/13, without file version, <http://hisashim.org/2009/12/13/thumbindex.html>.
- `thumb-index`, from the `fancyhdr` package, 2005/03/22 v3.2, [CTAN:macros/latex/contrib/fancyhdr/fancyhdr.pdf](#)
- `thumbpdf`, 2010/07/07, v3.11, [CTAN:support/thumbpdf/thumbpdf.sty](#)
- `thumby`, 2010/01/14, v0.1, [CTAN:macros/latex/contrib/thumby/thumby.sty](#)

`Oberdiek` All packages of Heiko Oberdiek's bundle 'oberdiek' (especially `holtxdoc`, `alphalph`, `atbegshi`, `infwarerr`, `kvoptions`, `picture`, and `rerunfilecheck`) are also available in a TDS compliant ZIP archive:

[CTAN:install/macros/latex/contrib/oberdiek.tds.zip](#).

It is probably best to download and use this, because the packages in there should be both recent and compatible.

`hyperref` Heiko Oberdiek's `hyperref` package is not included in that bundle but needs to be downloaded separately,
<http://mirror.ctan.org/install/macros/latex/contrib/hyperref.tds.zip>.

`Münch` A hyperlinked list of my (other) packages can be found at <http://www.Uni-Bonn.de/~uzs5pv/LaTeX.html>.

6.2 Package, unpacking TDS

Package. This package should be available on CTAN::

[CTAN:macros/latex/contrib/thumbs/thumbs.dtx](#)

The source file.

[CTAN:macros/latex/contrib/thumbs/thumbs.pdf](#)

The documentation.

[CTAN:macros/latex/contrib/thumbs/thumbs-example.pdf](#)

The compiled example file, as it should look like.

[CTAN:macros/latex/contrib/thumbs/README](#)

The README file.

[CTAN:install/macros/latex/contrib/thumbs.tds.zip](#)

Everything in TDS compliant, compiled format,

which additionally contains

thumbs.ins	The installation file.
thumbs.drv	The driver to generate the documentation.
thumbs.sty	The .style file.
thumbs-example.tex	The example file.

For required other packages, see the preceding subsection.

Unpacking. The .dtx file is a self-extracting docstrip archive. The files are extracted by running the .dtx through plain TeX:

`tex thumbs.dtx`

About generating the documentation see paragraph 6.4 below.

TDS. Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

thumbs.sty	→ <code>tex/latex/thumbs.sty</code>
thumbs.pdf	→ <code>doc/latex/thumbs.pdf</code>
thumbs-example.tex	→ <code>doc/latex/thumbs-example.tex</code>
thumbs-example.pdf	→ <code>doc/latex/thumbs-example.pdf</code>
thumbs.dtx	→ <code>source/latex/thumbs.dtx</code>

If you have a `docstrip.cfg` that configures and enables docstrip's TDS installing feature, then some files can already be in the right place, see the documentation of docstrip.

6.3 Refresh file name databases

If your \TeX distribution (te \TeX , mik \TeX ,...) relies on file name databases, you must refresh these. For example, te \TeX users run `texhash` or `mktexlsr`.

6.4 Some details for the interested

Unpacking with L \TeX . The `.dtx` chooses its action depending on the format:

plain \TeX : Run `docstrip` and extract the files.

L \TeX : Generate the documentation.

If you insist on using L \TeX for `docstrip` (really, `docstrip` does not need L \TeX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{thumbs.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by a configuration file `ltxdoc.cfg`. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with `pdflat \TeX` :

```
pdflatex thumbs.drv
makeindex -s gind.ist thumbs.idx
pdflatex thumbs.drv
makeindex -s gind.ist thumbs.idx
pdflatex thumbs.drv
```

6.5 Compiling the example

The example file, `thumbs-example.tex`, can be compiled via

```
latex thumbs-example.tex
or (recommended)
pdflatex thumbs-example.tex
```

and will need probably at least four (!) compiler runs to get everything right.

7 Acknowledgements

I would like to thank HEIKO OBERDIEK (`heiko dot oberdiek at googlemail dot com`) for providing the `hyperref` as well as a lot (!) of other useful packages (from which I also got everything I know about creating a file in `.dtx` format, ok, say it: copying), and the `news:comp.text.tex` and `news:de.comp.text.tex` newsgroups for their help in all things \TeX . Thanks for bug reports go to VERONICA BRANDT.

8 History

[2010/04/01 v0.01 – 2011/05/13 v0.46]

- Diverse β -versions during the creation of this package.

[2011/05/14 v1.0a]

- Upload to <http://www.ctan.org/pkg/thumbs>.

[2011/05/18 v1.0b]

- When more than one thumb mark is places at one single page, the variables containing the values (text, colour, backgroundcolour) of those thumb marks are now created dynamically. Theoretically, one can now have 2 147 483 647 thumb marks at one page instead of six thumb marks (as with thumbs version 1.0a), but I am quite sure that some other limit will be reached before the 2 147 483 647th thumb mark.
- Bug fix: When a document using the thumbs package was compiled, and the .aux and .tmb files were created, and the .tmb file was deleted (or renamed or moved), while the .aux file was not deleted (or renamed or moved), and the document was compiled again, and the .aux file was reused, then reading from the then empty .tmb file resulted in an endless loop. Fixed.
- Minor details.

[2011/05/20 v1.0c]

- The thumb mark width is written to the log file (in verbose mode only). The knowledge of the value could be helpful for the user, when option `width={auto}` was used, and one wants the thumb marks to be half as big, or with double width, or a little wider, or a little smaller... Also thumb marks' height, top thumb margin and bottom thumb margin are given. Look for

```
***** THUMB dimensions *****
```

in the log file.
- Bug fix: There was a

```
\advance\th@mbheighty-\th@mbsdistance,
```

where

```
\advance\th@mbheighty-\th@mbsdistance
\advance\th@mbheighty-\th@mbsdistance
```

should have been, causing wrong thumb marks' height, thereby wrong number of thumb marks per column, and thereby another endless loop. Fixed.
- The ifthen package is no longer required for the thumbs package, removed from its \RequirePackage entries.
- The infwarerr package is used for its \PackageInfoNoLine command.
- The warning package is no longer used by the thumbs package, removed from its \RequirePackage entries. Instead, the atveryend package is used, because it is loaded anyway when the hyperref package is used.

- Minor details.

[2011/05/26 v1.0d]

- Bug fix: labels or index or glossary entries were gobbled for the thumb marks overview page, but gobbling leaked to the rest of the document; fixed.
- New option `silent`, complementary to old option `verbose`.
- New option `draft` (and complementary option `final`), which “de-colourises” the thumb marks and reduces their width to 2 pt.

[2011/06/02 v1.0e]

- Gobbling of labels or index or glossary entries improved.
- Dimension `\thumbsinfodimen` no longer needed.
- Internal command `\thumbs@info` no longer needed, removed.
- New value `autoauto` (not default!) for option `width`, setting the thumb marks width to fit the widest thumb mark text.
- When `width={autoauto}` is not used, a warning is issued, when the thumb marks width is smaller than the thumb mark text.
- Bug fix: Since version v1.0b as of 2011/05/18 the number of thumb marks at one single page was no longer limited to six, but the example still stated this. Fixed.
- Minor details.

[2011/06/08 v1.0f]

- Bug fix: `\th@mb@titlelabel` should be defined `\empty` at the beginning of the package: fixed. (Bug reported by VERONICA BRANDT. Thanks!)
- Bug fix: `\thumbs@distance` versus `\th@mbsdistance`: There should be only two times `\thumbs@distance`, the value of option `distance`, otherwise it should be the length `\th@mbsdistance`: fixed. (Also this bug reported by VERONICA BRANDT. Thanks!)
- `\hoffset` and `\voffset` are now ignored by default, but can be regarded using the options `ignorehoffset=false` and `ignorevoffset=false`. (Pointed out again by VERONICA BRANDT. Thanks!)
- Added to documentation: The package takes the dimensions `\AtBeginDocument`, thus later the page dimensions should not be changed. Now explicitly stated this in the documentation. `\paperwidth` changes are probably possible.
- Documentation and example now give a lot more details.
- Changed diverse details.

- Bug fix: When hyperref was *not* used, then some labels were not set at all - fixed.
- Bug fix: When more than one Table of Tumbs was created with the \thumbsoverview command, there were some counter ... already defined-errors - fixed.
- Bug fix: When more than one Table of Tumbs was created with the \thumbsoverview command, there was a Label TableofTumbs multiply defined-error and it was not possible to refer to any but the last Table of Tumbs. Fixed with labels TableofTumbs1, TableofTumbs2,... (TableofTumbs still aims at the last used Table of Thumbs for compatibility.)
- Bug fix: Sometimes the thumb marks were stoped one page too early before the Table of Thumbs - fixed.
- Some details changed.

When you find a mistake or have a suggestion for an improvement of this package, please send an e-mail to the maintainer, thanks! (Please see BUG REPORTS in the README.)

Note: Q, X, and Y are not missing in the following index, but no command *beginning* with any of these letters has been used in this thumbs package.

9 Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; plain numbers refer to the code lines where the entry is used.
