2 Introduction

This file contains all the macros for typesetting *TUGboat* with both plain T_EX and L^AT_EX 2_ε.

2.1 Summary of control sequences

Abbreviations. Just a listing with indications of expansion where that may not be obvious. For full definitions, see real code below (Section 3.4).

<code>\AllTeX</code>	(L ^A)T _E X
<code>\AMS</code>	American Mathematical Society
<code>\AmSTeX</code>	
<code>\aw</code>	A-W (abbreviation for Addison-Wesley)
<code>\AW</code>	Addison-Wesley
<code>\BibTeX</code>	

<code>\CandT</code>	Computers & Typesetting
<code>\ConTeXt</code>	ConT _E Xt
<code>\Cplusplus</code>	C++
<code>\DTD</code>	
<code>\DVI</code>	
<code>\DVD</code>	
<code>\DVIPDFMx</code>	DVIPDFM <i>x</i>
<code>\DVItOVDU</code>	DVItoVDU
<code>\eTeX</code>	ε -T _E X
<code>\Ghostscript</code>	
<code>\Hawaii</code>	Hawai'i
<code>\HTML</code>	
<code>\ISBN</code>	ISBN
<code>\ISO</code>	
<code>\ISSN</code>	ISSN
<code>\JTeX</code>	
<code>\JoT</code>	The Joy of T _E X
<code>\LaTeX</code>	
<code>\MacOSX</code>	Mac OS X
<code>\MathML</code>	
<code>\Mc</code>	M with raised c
<code>\MF</code>	METAFONT
<code>\mf</code>	METAFONT
<code>\MFB</code>	The Metafont book
<code>\MP</code>	METAPOST
<code>\mp</code>	MetaPost (in text only: remains ‘ \mp ’ in maths)
<code>\OMEGA</code>	Omega ‘logo’ (Ω)
<code>\OCP</code>	Omega compiled process
<code>\OTP</code>	Omega translation process
<code>\mtex</code>	multilingual T _E X
<code>\NTS</code>	New Typesetting System
<code>\pcMF</code>	pcMF
<code>\PCTeX</code>	
<code>\pcTeX</code>	
<code>\Pas</code>	Pascal
<code>\PiCTeX</code>	
<code>\plain</code>	plain (in typewriter font)
<code>\POBox</code>	P. O. Box
<code>\PS</code>	PostScript (with hyphenation)
<code>\SC</code>	Steering Committee
<code>\SGML</code>	SGML
<code>\SliTeX</code>	
<code>\s1MF</code>	Metafont (slanted) — deprecated: use <code>\textsl</code> instead
<code>\stTeX</code>	T _E X for the Atari ST
<code>\SVG</code>	
<code>\TANGLE</code>	
<code>\TB</code>	The T _E Xbook

<code>\TeX</code>	(Although nearly every package defines this, most—including plain—are missing the space-factor adjustment)
<code>\TeXhax</code>	
<code>\TeXMaG</code>	(defunct)
<code>\TeXtures</code>	
<code>\TeXXeT</code>	
<code>\Thanh</code>	
<code>\TFM</code>	TFM
<code>\TUB</code>	<i>TUGboat</i>
<code>\TUG</code>	TeX Users Group
<code>\UNIX</code>	
<code>\UTF</code>	
<code>\VAX</code>	
<code>\VorTeX</code>	
<code>\XeT</code>	
<code>\XeTeX</code>	reflected and lowered first ‘E’
<code>\XML</code>	
<code>\WEB</code>	
<code>\WEAVE</code>	

Macros for things that are slightly more significant.

<code>\NoBlackBoxes</code>	turns off marginal rules marking overfull boxes
<code>\BlackBoxes</code>	turns them back on
<code>\newline</code>	horizontal glue plus a break
<code>\ifundefined#1</code>	checks argument with <code>\csname</code> against <code>\relax</code>
<code>\topsmash</code>	smashes above baseline (from AMSTeX)
<code>\botsmash</code>	smashes below baseline (from AMSTeX)
<code>\smash</code>	smashes both (from plain)
<code>\ulap</code>	lap upwards
<code>\dlap</code>	lap downwards
<code>\xlap</code>	reference point at center horizontally; 0 width
<code>\ylap</code>	reference point at center vertically; 0 height, depth
<code>\zlap</code>	combination <code>\xlap</code> and <code>\ylap</code>
<code>\basezero</code>	to avoid insertion of <code>baselineskip</code> and <code>lineskip</code> glue
<code>\nullhrule</code>	empty <code>\hrule</code>
<code>\nullvrule</code>	empty <code>\vrule</code>
<code>\makestrut[#1;#2]</code>	ad hoc struts; #1=height, #2=depth
<code>\today</code>	today’s date
<code>\SetTime</code>	converts <code>\time</code> to hours, minutes
<code>\now</code>	displays time in hours and minutes
<code>\Now</code>	shows current date and time
<code>\ifPrelimDraft</code>	flag to indicate status as preliminary draft
<code>\rtitlex</code>	<i>TUGboat</i> volume and number info for running head
<code>\midrtitlex</code>	information for center of running head
<code>\HorzR@gisterRule</code>	pieces of registration marks (‘trimmarks’)
<code>\DownShortR@gisterRule</code>	

<code>\UpShortR@gisterRule</code>	
<code>\ttopregister</code>	top registration line with ‘T’ in center
<code>\tbotregister</code>	bottom registration line with inverted ‘T’ in center
<code>\topregister</code>	register actually used
<code>\botregister</code>	
<code>\raggedskip</code>	parameters used for ragged settings
<code>\raggedstretch</code>	
<code>\raggedparfill</code>	
<code>\raggedspaces</code>	
<code>\raggedright</code>	
<code>\raggedleft</code>	
<code>\raggedcenter</code>	
<code>\normalspaces</code>	
<code>\raggedbottom</code>	
<code>\bull</code>	square bullet
<code>\cents</code>	‘cents’ sign
<code>\Dag</code>	superscripted dagger
<code>\careof</code>	c/o
<code>\sfrac</code>	slashed fraction (arguments optionally separated by a slash)
<code>\cs</code>	control sequence name <code>\cs{name}→name</code>
<code>\env</code>	environment name <code>\env{name}→\begin{name}</code>
<code>\meta</code>	meta-argument name <code>\meta{name}→{name}</code>
<code>\dash</code>	en-dash surrounded by thinspaces; only breakable AFTER
<code>\Dash</code>	em-dash, as above
<code>\hyph</code>	permit automatic hyphenation after an actual hyphen
<code>\slash</code>	‘breakable’ slash
<code>\nth</code>	for obtaining ‘1 st ’, ‘2 nd ’, ‘3 rd ’, etc.
<code>\tubissue</code>	gets \TUB followed by volume and issue numbers
<code>\xEdNote</code>	Editor’s Note:
<code>\Review:</code>	Review: (for title of book review article)
<code>\reviewitem</code>	begin data for item being reviewed
<code>\revauth</code>	with one argument, author(s) of item being reviewed
<code>\revtitle</code>	with one argument, title of ...
<code>\revpubinfo</code>	with one argument, other info pertaining to ...
<code>\endreviewitem</code>	end data for item being reviewed
<code>\booktitle</code>	with one argument, format book title in text
<code>\Input</code>	<code>\input</code> with some other bookkeeping for case where multiple articles are put together
<code>\TBremark</code>	reminder to <i>TUGboat</i> editorial staff
<code>\TEnableRemarks</code>	enable \TBremarks (normally suppressed)
<code>\pagexref</code>	used to write out page numbers to screen and

<code>\pagexrefON</code>	external files
<code>\pagexrefOFF</code>	
<code>\xrefTO</code>	used for symbolic cross-reference to other pages
<code>\xrefTOON</code>	in <i>TUGboat</i>
<code>\xrefTOOFF</code>	
<code>\TBdriver</code>	marks code which only takes effect when articles are run together in a driver file
<code>\signaturemark</code>	items for signatures
<code>\signaturewidth</code>	

3 L^AT_EX 2_ε TUGboat class file

3.1 Setup and options

Check for reloading. Hmm. . . Does this happen with L^AT_EX 2_ε classes? Probably, in fact, as well that it doesn't, since the `\tugstyinit` referenced here doesn't exist; however, it's possible that we might need a similar mechanism in the future, so we retain its skeleton, without fleshing out the `\tugstyinit` bones.

```
22 (*!tugboatcls)
23 \csname tugstyloaded@ \endcsname
24 \def\tugstyloaded@{\tugstyinit\endinput}
```

Acquire a name for this class if we don't already have one (by virtue of having been loaded by `tugproc.cls`). This name will be used in error messages and the like.

```
25 \providecommand{\@tugclass}{!tugboat}
```

Warnings/error messages/information messages — if we're using L^AT_EX 2_ε we can use the `\Class*` commands:

```
26 \def\TBInfo{\ClassInfo{\@tugclass}}
27 \def\TBError{\ClassError{\@tugclass}}
28 \def\TBWarning{\ClassWarning{\@tugclass}}
29 \def\TBWarningNL{\ClassWarningNoLine{\@tugclass}}
```

Some trivial options, just flicking switches, etc.

```
30 \newif\ifpreprint
31 \def\preprint{\preprinttrue}
32 \DeclareOption{draft}{%
33   \AtEndOfClass{%
34     \setcounter{page}{1001}%
35     \BlackBoxes
36     \def\MakeRegistrationMarks{}%
37     \PrelimDrafttrue
38   }%
39 }
40 \DeclareOption{preprint}{%
41   \preprinttrue
42 }
43 \DeclareOption{final}{%
44   \AtEndOfClass{%
45     \NoBlackBoxes
46     \PrelimDraftfalse
```

```

47   }%
48 }

```

The rules dictate that the output should be set using a 10pt base font.

```

49 \DeclareOption{11pt}{%
50   \TBWarning{The \@tugclass\space class only supports 10pt fonts:
51     \MessageBreak option \CurrentOption\space ignored}%
52 }
53 \DeclareOption{12pt}{\csname ds@11pt\endcsname}

```

Similarly, ignore one/two-side/column

```

54 \DeclareOption{oneside}{\TBWarning{Option \CurrentOption\space ignored}}
55 \DeclareOption{twoside}{\ds@oneside}
56 \DeclareOption{onecolumn}{\ds@oneside}
57 \DeclareOption{twocolumn}{\ds@oneside}

```

There are these people who seem to think `tugproc` is an option rather than a class... (Note that it's already been filtered out if we were calling from `ltugproc`.)

```

58 \DeclareOption{tugproc}{%
59   \TBWarning{Option \CurrentOption\space ignored: use class ltugproc
60     instead of \@tugclass}%
61 }

```

Option `rawcite` (the default) specifies the default citation mechanism (as built-in to L^AT_EX); option `harvardcite` specifies the author-date citation mechanism defined in section 3.22 below.

```

62 \DeclareOption{rawcite}{\let\if@Harvardcite\iffalse}
63 \DeclareOption{harvardcite}{\let\if@Harvardcite\iftrue}

```

Option `extralabel` (the default) specifies that the publication years of two successive references with otherwise identical labels will be tagged with distinguishing letters; option `noextralabel` causes those letters to be suppressed. Note that (a) no two references will in any case have the same labels in the default (plain) `rawcite` setup, and that (b) the distinguishing letters appear in the labels themselves — the even remotely intelligent reader should be able to work out the correspondence one with the other...

```

64 \DeclareOption{extralabel}{\let\UseExtraLabel\@firstofone}
65 \DeclareOption{noextralabel}{\let\UseExtraLabel\@gobble}

```

The section-numbering style, so that we can allow the same heading layout as in the plain macros.

```

66 \DeclareOption{numbersec}{\let\if@numbersec\iftrue}
67 \DeclareOption{nonumber}{\let\if@numbersec\iffalse}

```

Any other options, we pass on to `article.cls` before we load it:

```

68 \DeclareOption*{\PassOptionsToClass{\CurrentOption}{article}}

```

Request default options (draft mode, standard citation, double-sided printing), process all options, and then get the base document class on top of which we reside.

```

69 \ExecuteOptions{draft,extralabel,numbersec,rawcite}
70 \ProcessOptions
71 \LoadClass[twoside]{article}

```

Various fonts used throughout. Some effort has been made to suppress these things with explicit sizes in the macro name (`\tensl` is an example below), but keeping in step with the documentation is one thing that restricts such a move.

```
72 \def\sectitlefont{\fontfamily\sfdefault\fontseries{bx}\fontshape{n}%
73     \fontsize\@xviipt\stbaselineskip\selectfont}
74 \def\tensl{\fontseries{m}\fontshape{sl}\fontsize\@xpt\@xiipt
75     \selectfont}
```

This font selection command is used *only* for the ‘Editor’s Note’ introduction to notes; sadly it makes explicit reference to CMR, and Barbara Beeton has agreed that the reference may be constructed to use the current family such that, if no upright italic is defined, ordinary italics are used. A project for later...

```
76 \def\EdNoteFont{\fontfamily{cmr}\fontseries{m}\fontshape{ui}%
77     \selectfont}
78 \ltugboatcls
```

If Ulrik Vieth’s `mflogo.sty` is around, we’ll use it. Otherwise (pro tem, at least) we’ll warn the user and define the absolute minimum of machinery that *TUGboat* requires (that which was used prior to the invention of L^AT_EX 2_ε).

```
79 (*common)
80 \IfFileExists{mflogo.sty}%
81   {\RequirePackage{mflogo}}%
82 \ltugcomn {TBWarning
83 \ltugcomn {PackageWarning{ltugcomn
84   {Package mflogo.sty not available --\MessageBreak
85   Proceeding to emulate mflogo.sty}
86 \DeclareRobustCommand\logofamily{%
87   \not@math@alphabet\logofamily\relax
88   \fontencoding{U}\fontfamily{logo}\selectfont}
89 \DeclareTextFontCommand{\textlogo}{\logofamily}
90 \def\MF{\textlogo{META}\-\textlogo{FONT}\@}
91 \def\MP{\textlogo{META}\-\textlogo{POST}\@}
92 \DeclareFontFamily{U}{logo}{}
93 \DeclareFontShape{U}{logo}{m}{n}{%
94   <8><9>gen*logo%
95   <10><10.95><12><14.4><17.28><20.74><24.88>logo10%
96   }{}
97 \DeclareFontShape{U}{logo}{m}{sl}{%
98   <8><9>gen*logosl%
99   <10><10.95><12><14.4><17.28><20.74><24.88>logosl10%
100  }{}
101 \DeclareFontShape{U}{logo}{m}{it}{%
102   <->ssub*logo/m/sl%
103   }{}%
104 }
```

3.2 Resetting at start of paper

`\ResetCommands` We store a set of commands that should be executed at the start of each paper, before any paper-specific customisation. These commands (stored in the token register `\ResetCommands`) include things such as resetting section and footnote numbers, re-establishing default settings of typesetting parameters, and so on. The user (or more typically, editor) may execute the commands by using the `\AddToResetCommands` `\StartNewPaper`

command `\StartNewPaper`. Things I've not yet thought of may be added to the list of commands, by

```

105 \newtoks\ResetCommands
106 \ResetCommands{%
107   \setcounter{part}{0}%
108   \setcounter{section}{0}%
109   \setcounter{footnote}{0}%
110   \authornumber\z@
111 }
112 \newcommand{\AddToResetCommands}[1]{%
113   \AddToResetCommands\expandafter{\AddToResetCommands#1}%
114 }

```

3.3 Helpful shorthand (common code with Plain styles)

`\makeescape`, `\makecomment` allow users to change the category code of a single character a little more easily. These require that the character be addressed as a control sequence: e.g., `\makeescape{/}` will make `'/'` an escape character.

```

115 (*!latex)
116 \def\makeescape#1{\catcode'#1=0 }
117 \def\makebgroup#1{\catcode'#1=1 }
118 \def\makeegroup#1{\catcode'#1=2 }
119 \def\makemath #1{\catcode'#1=3 }
120 (/!latex)
121 (*!latex)
122 \def\makeescape#1{\catcode'#1=\z@}
123 \def\makebgroup#1{\catcode'#1=\@ne}
124 \def\makeegroup#1{\catcode'#1=\tw@}
125 \def\makemath #1{\catcode'#1=\thr@@}
126 (/!latex)
127 \def\makealign #1{\catcode'#1=4 }
128 \def\makeeol #1{\catcode'#1=5 }
129 \def\makeparm #1{\catcode'#1=6 }
130 \def\makesup #1{\catcode'#1=7 }
131 \def\makesub #1{\catcode'#1=8 }
132 \def\makeignore#1{\catcode'#1=9 }
133 \def\makespace #1{\catcode'#1=10 }
134 \def\makeletter#1{\catcode'#1=11 }
135 \chardef\other=12
136 \let\makeother\@makeother
137 \def\makeactive#1{\catcode'#1=13 }
138 \def\makecomment#1{\catcode'#1=14 }

```

`\savecat#1` and `\restorecat#1` will save and restore the category of a given character. These are useful in cases where one doesn't wish to localize the settings and therefore be required to globally define or set things.

```

139 \def\savecat#1{%
140   \expandafter\xdef\csname\string#1savedcat\endcsname{\the\catcode'#1}
141 \def\restorecat#1{\catcode'#1=\csname\string#1savedcat\endcsname}
142 !!latex)\savecat\@
143 !!latex)\makeletter\@

```

`\SaveCS#1` and `\RestoreCS#1` save and restore 'meanings' of control sequences. Again this is useful in cases where one doesn't want to localize or where

global definitions clobber a control sequence which is needed later with its ‘old’ definition.

```

144 \def\SaveCS#1{\expandafter\let\csname saved@@#1\expandafter\endcsname
145   \csname#1\endcsname}
146 \def\RestoreCS#1{\expandafter\let\csname#1\expandafter\endcsname
147   \csname saved@@#1\endcsname}

```

To distinguish between macro files loaded

```

148 \def\plaintubstyle{plain}
149 \def\largetubstyle{latex}

```

Control sequences that were first defined in $\text{\LaTeX} 2_{\epsilon}$ of 1995/06/01 (or later), but which we merrily use. Only define if necessary:

```

150 \providecommand\hb@xt@{\hbox to}
151 \providecommand\textsuperscript[1]{\ensuremath{\m@th
152   ^{\mbox{\fontsize\sf@size\z@
153     \selectfont #1}}}}

```

(Note that that definition of `\textsuperscript` isn’t robust, but probably doesn’t need to be. . . What’s more, it doesn’t appear in the mythical 2.09 version of the package.)

3.4 Abbreviations and logos

Font used for the METAFONT logo, etc.

```

154 \def\AllTeX{(\La\kern-.075em)\kern-.075em\TeX}
155 \def\AMS{American Mathematical Society}
156 \def\AmS{\mathcal{A}}\kern-.1667em\lower.5ex\hbox

203     \kern-.2em\lower.376ex\hbox{\m@th\mathcal{M}$}\kern-.125em
204     {\m@th\mathcal{S}$}-\TeX}
205 % This code
206 % is hacked from its definition of \cs{LaTeX}; it allows slants (for
207 % example) to propagate into the raised (small) 'A':
208 % \begin{macrocode}
209 \newcommand{\La}%
210   {L\kern-.36em
211     {\setbox0\hbox{T}%
212       \vbox to\ht0{\hbox{\m@th$%
213         \csname S@f@size\endcsname
214           \fontsize\sf@size\z@
215             \math@fontsfalse\selectfont
216               A}%
217         \vss}%
218     }}

```

We started with the intention that we wouldn't redefine `\LaTeX` when we're running under it, so as not to trample on an existing definition. However, this proves less than satisfactory; a single logo may be OK for the run of documents, but for *TUGboat*, we find that something noticeably better is necessary; see section 3.11.

```

XeTeX requires reflecting the first E, hence we complain if the graphics package is not present. (For plain documents, this can be loaded via Eplain.) Also, at Barbara's suggestion, if the current font is slanted, we rotate by 180 instead of reflecting so there is at least a chance to look ok. (The magic values here seem more or less ok for cmsl and cmti.)

3.6 Utility registers and definitions

We define a few scratch registers (and the like) for transient use; they're all paired: an internal one (`\T@st*`) and an external one (`\Test*`).

Comment: Exercise for an idle day: find whether all these are necessary, or whether we can use the L^AT_EX temporaries for some (or all) of the `\T@st*` ones.

Comment: (bb) All these registers are used in the plain version, `tugboat.sty`.

3.7 Ragged right and friends

`\raggedskip` Plain T_EX's definition of `\raggedright` doesn't permit any stretch, and results in too many overfull boxes. We also turn off hyphenation. This code lies somewhere between that of Plain T_EX and of L^AT_EX.

```
\raggedstretch  
\raggedparfill  
\raggedspaces 378 \newdimen\raggedskip \raggedskip=\z@  
379 \newdimen\raggedstretch \raggedstretch=5em % ems of font set now (10pt)  
380 \newskip\raggedparfill \raggedparfill=\z@\@plus 1fil  
381 \def\raggedspaces{\spaceskip=.3333em \relax \xspaceskip=.5em \relax }
```

`\raggedright` Some applications may have to add stretch, in order to avoid all overfull boxes.

`\raggedleft` We define the following uses of the above skips, etc.

```
\raggedcenter 382 \def\raggedright{%  
\normalspaces
```

```

383 \nohyphens
384 \rightskip=\raggedskip\@plus\raggedstretch \raggedspaces
385 \parfillskip=\raggedparfill
386 }
387 \def\raggedleft{%
388 \nohyphens
389 \leftskip=\raggedskip\@plus\raggedstretch \raggedspaces
390 \parfillskip=\z@skip
391 }
392 \def\raggedcenter{%
393 \nohyphens
394 \leftskip=\raggedskip\@plus\raggedstretch
395 \rightskip=\leftskip \raggedspaces
396 \parindent=\z@ \parfillskip=\z@skip
397 }
398 \def\normalspaces{\spaceskip\z@skip \xspaceskip\z@skip}

```

Miscellaneous useful stuff. Note that L^AT_EX 2_ε defines a robust `\,`, but that we provide a new definition of `~` by redefining its robust underpinnings¹ (based on the version in AMS-`TEX` — the L^AT_EX 2_ε version has `\leavevmode` and doesn't care about surrounding space).

```

399 \DeclareRobustCommand{\nobreakspace}{%
400 \unskip\nobreak\ \ignorespaces}

```

Plain `TEX` defines `\newbox` as `\outer`. We solemnly preserve the following, which removes the `\outer`ness; of course, we carefully exclude it from what we generate... (`\outer`ness is a spawn of the devil, is it not? Barbara Beeton responded to the previous sentence “`\outer`ness has its place: it avoids register buildup, hence running out of memory”. In another context, David Carlisle remarked that an error control mechanism that causes more confusing errors than it prevents is rather a poor one. This is perhaps not the place to conduct a serious debate...)

3.9 Dates, volume and issue numbers, etc.

Dates and other items which identify the volume and issue. `\issueseqno` is a sequential issue number starting from the first issue published; volume 15,4 has `\issueseqno=45`.

```
\vol 19, 1.
```

To use: `\issdate March 1998`.

```
\issueseqno=58
```

Starting with volume 23 (nominal 2002), we have `\issyear` instead of `\issdate`, because issues don't have months any more.

For production, these are set in a separate file, `tugboat.dates`, which is issue-specific.

Comment: I would like to make the code read a file `tugboat.dates` in the current directory or its parent. This is easy except under 'odd' operating systems (VMS is an example that springs to mind, RISCos may be even worse) whose syntax is out of the ordinary.

```
479 \newcount\issueseqno          \issueseqno=-1
480 \def\v@lx{\gdef\volx{Volume~\volno~(\volyr), No.~\issno}}

```

`\TBremarks` are things that need to be drawn to the attention of the editors; the conscientious author will include such things in the article file. By default, remarks are suppressed, but their appearance may be enabled by the `\TBEEnableRemarks` command, which can be included in the configuration file `ltugboat.cfg` (or `ltugproc.cfg`, if that's what we're at).

```

518 \newif\if@RMKopen           \@RMKopenfalse
519 \newwrite\@TBremarkfile
520 \def\@TBremark#1{%
521   \if@RMKopen

In L^AT_EX 2_ε, `twoside` option is forced on when `article.cls` is loaded.

3.11 Messing about with the L^AT_EX logo

Barbara Beeton's pleas for L^AT_EX logos that look right in any font shape provoked me to generate the following stuff that is configurable.

Here's the command for the user to define hir own new version. The arguments are font family, series and shape, and then the two kern values used in placing the raised 'A' of L^AT_EX.

```
637 \newcommand\DeclareLaTeXLogo[5]{\expandafter\def
638 \csname @LaTeX@#1/#2/#3\endcsname{#{4}{#5}}}
```

The default values are as used in the source of L^AT_EX itself:

```
639 \def@LaTeX@default{.36}{.15}}
```

More are defined in the initial version, for bold CM sans (which is used as `\SecTitleFont`), and CM italic medium and bold, and Bitstream Charter (which Nelson Beebe likes to use):

```
640 \DeclareLaTeXLogo{cmss}{bx}{n}{.3}{.15}
641 \DeclareLaTeXLogo{cmr}{m}{it}{.3}{.27}
642 \DeclareLaTeXLogo{cmr}{bx}{it}{.3}{.27}
643 \DeclareLaTeXLogo{bch}{m}{n}{.2}{.08}
644 \DeclareLaTeXLogo{bch}{m}{it}{.2}{.08}
```

Redefine `\LaTeX` to choose the parameters for the current font, or to use the default value otherwise:

```
645 \DeclareRobustCommand\LaTeX{\expandafter\let\expandafter\reserved@a
```

```

646 \csname @LaTeX@f@family/\f@series/\f@shape\endcsname
647 \ifx\reserved@a\relax\let\reserved@a\@LaTeX@default\fi
648 \expandafter\@LaTeX\reserved@a}

```

Here's the body of what was originally `\LaTeX`, pulled out with its roots dripping onto the smoking ruin of original `LaTeX`, and then bits stuck in on the side.

`\@LaTeX@default` provides parameters as one finds in the original; other versions are added as needed.

```

649 \newcommand\@LaTeX[2]{L\kern-#1em
650     {\sbox\z@ T%
651     \vbox to\ht0{\hbox{\$m@th$%
652     \csname S@\f@size\endcsname
653     \fontsize\sf@size\z@
654     \math@fontsfalse\selectfont
655     A}%
656     \vss}%
657     }%
658     \kern-#2em%
659     \TeX}

```

3.12 Authors, contributors, addresses, signatures

Each article may have several authors (of course), so we permit an `\author` command for each of them. The names are then stored in a set of `\csnames` called `\author1`, `\author2`, ... Similarly, there are several `\address<n>` and `\netaddress<n>` and `\PersonalURL<n>` commands set up for each article.

Comment: I would like to make provision for several authors at the same address, but (short of preempting the `*` marker, which it would be nice to retain so as to preserve compatibility with the plain style) I'm not sure how one would signal it.

```

660 \def\theauthor#1{\csname theauthor#1\endcsname}
661 \def\theaddress#1{\csname theaddress#1\endcsname}
662 \def\thenetaddress#1{\csname thenetaddress#1\endcsname}
663 \def\thePersonalURL#1{\csname thePersonalURL#1\endcsname}

```

The standard way of listing authors is to iterate from 1 to `\count@` and to pick the author names as we go.

```

664 (!latex)\newcount\@tempcnta
665 \def\@defaultauthorlist{%
666   \@getauthorlist\@firstofone
667 }

```

`\@getauthorlist` processes the author list, passing every bit of stuff that needs to be typeset to its argument.

```

668 \def\@getauthorlist#1{%
669   \count@\authornumber
670   \advance\count@ by -2
671   \@tempcnta0

```

Loop to output the first $n - 2$ of the n authors (the loop does nothing if there are two or fewer authors)

```

672 \loop
673   \ifnum\count@>0
674     \advance\@tempcnta by \@ne
675     #1{\ignorespaces\theauthor{\number\@tempcnta}\unskip, }%
676     \advance\count@ by \m@ne
677 \repeat
678 \count@\authornumber
679 \advance\count@ by -\@tempcnta
680 \ifnum\authornumber>0

```

If there are two or more authors, we output the penultimate author's name here, followed by 'and'

```

681   \ifnum\count@>1
682     \count@\authornumber
683     \advance\count@ by \m@ne
684     #1{\ignorespaces\theauthor{\number\count@}\unskip\ and }%
685   \fi

```

Finally (if there were any authors at all) output the last author's name:

```

686   #1{\ignorespaces\theauthor{\number\authornumber}\unskip}
687 \fi
688 }

```

Signature blocks. The author can (in principle) define a different sort of signature block using `\signature`, though this could well cause the editorial group to have collective kittens (unless it had been discussed in advance...)

```

689 \def\signature#1{\def\@signature{#1}}
690 \def\@signature{\@defaultsignature}

```

`\@defaultsignature` loops through all the authors, outputting the details we have about that author, or (if we're in a sub-article) outputs the contributor's name and closes the group opened by `\contributor`. It is (as its name implies) the default body for `\makesignature`

```

691 \def\@defaultsignature{%
692   \let\thanks\@gobble
693   \ifnum\authornumber<0

```

if $\text{authornumber} < 0$, we are in a contributor's section

```

694     \medskip
695     \frenchspacing
696     \signaturemark
697     \theauthor{\number\authornumber}\\

699     \allowhyphens
700     \thenetaddress{\number\authornumber}\\
701     \thePersonalURL{\number\authornumber}\\
702   \else

```

$\text{authornumber} \geq 0$, so we are in the body of an ordinary article

```

703     \count@=0
704     \loop
705     \ifnum\count@<\authornumber

```

```

706         \medskip
707         \advance\count@ by \@ne
708         \signaturemark
709         \theauthor{\number\count@}\
710         \theaddress{\number\count@}\
711         {%
712             \allowhyphens
713             \thenetaddress{\number\count@}\
714             \thePersonalURL{\number\count@}\
715         }%
716     \repeat
717 \fi
718 }%
719 }
720 \newdimen\signaturewidth \signaturewidth=12pc

```

The optional argument to `\makesignature` is useful in some circumstances (e.g., multi-contributor articles)

```

721 \newcommand\makesignature[1][\medskipamount]{%

```

check the value the user has put in `\signaturewidth`: it may be at most 1.5pc short of `\columnwidth`

```

722 \@tempdima\signaturewidth
723 \advance\@tempdima 1.5pc
724 \ifdim \@tempdima>\columnwidth
725     \signaturewidth \columnwidth
726     \advance\signaturewidth -1.5pc
727 \fi
728 \par
729 \penalty9000
730 \vspace{#1}%
731 \rightline{%
732     \vbox{\hsize\signaturewidth \ninepoint \raggedright
733         \parindent \z@ \everypar={\hangindent 1pc }
734         \parskip \z@skip
735         \def\|{\unskip\hfil\break}%
736         \def\\{\endgraf}%
737         \def\phone{\rm Phone: }
738         \rm\@signature}%
739 }%
740 \ifnum\authornumber<0 \endgroup\fi
741 }
742 \def\signaturemark{\leavevmode\llap{\$\diamond$\enspace}}

```

The code used to define the following:

```

{\makeactive\@
\gdef\signatureat{\makeactive\@\def@{\char"40\discretionary}{-}{-}}
\makeactive\%
\gdef\signaturepercent{\makeactive\%\def%{\char"25\discretionary}{-}{-}}
}

```

However, they were never used within the class (or within `ltugproc.cls`). They have therefore been deleted; the identically defined `\netaddrat` and

`\netaddrpercent` may be used in the unlikely event that they're needed elsewhere.

Now all the awful machinery of author definitions. `\authornumber` records the number of authors we have recorded to date.

```
743 \newcount\authornumber
744 \authornumber=0
```

`\author` 'allocates' another author name (by bumping `\authornumber`) and also sets up the address and netaddress for this author to produce a warning and to prevent oddities if they're invoked. This last assumes that invocation will be in the context of `\signature` (`ltugboat.cls`) or `\maketitle` (`ltugproc.cls`); in both cases, invocation is followed by a line break (tabular line break `\\` in `ltugproc`, `\endgraf` in `\makesignature` in `ltugboat`).

```
745 \def\author{%
746   \global\advance\authornumber\@ne
747   \TB@author
748 }
```

`\contributor` is for a small part of a multiple-part article; it begins a group that will be ended in `\makesignature`

```
749 \def\contributor{%
750   \begingroup
751   \authornumber\m@ne
752   \TB@author
753 }
```

Both 'types' of author fall through here to set up the author name and to initialise author-related things. `\EDITORno*` commands allow the editor to record that there's good reason for an *address* or *netaddress* not to be there (the *personalURL* is optional anyway).

```
754 \def\TB@author#1{%
755   \expandafter\def\csname theauthor\number\authornumber\endcsname
756     {\ignorespaces#1\unskip}%
757   \expandafter\def\csname theaddress\number\authornumber\endcsname
758     {\TBWarningNL{Address for #1\space missing}\@gobble}%
759   \expandafter\def\csname thenetaddress\number\authornumber\endcsname
760     {\TBWarningNL{Net address for #1\space missing}\@gobble}%
761   \expandafter\let\csname thePersonalURL\number\authornumber\endcsname
762     \@gobble
763 }
764 \def\EDITORnoaddress{%
765   \expandafter\let\csname theaddress\number\authornumber\endcsname
766     \@gobble
767 }
768 \def\EDITORnonetaddress{%
769   \expandafter\let\csname thenetaddress\number\authornumber\endcsname
770     \@gobble
771 }
```

`\address` simply copies its argument into the `\theaddress<n>` for this author.

```
772 \def\address#1{%
773   \expandafter\def\csname theaddress\number\authornumber\endcsname
774     {\leavevmode\ignorespaces#1\unskip}}
```

`\network` is for use within the optional argument of `\netaddress`; it defines the *name* of the network the user is on.

Comment: I think this is a fantasy, since everyone (in practice, nowadays) quotes an internet address. In principle, there are people who will quote X.400 addresses (but they're few and far between) and I have (during 1995!) seen an address with an UUCP bang-path component on `comp.text.tex`, but *really!*

```
775 \def\network#1{\def\@network{#1: }}
```

`\netaddress` begins a group, executes an optional argument (which should not, presumably, contain global commands) and then relays to `\@relay@netaddress` with both `@` and `%` made active (so that they can be discretionary points in the address). If we're using L^AT_EX 2_ε, we use the default-argument form of `\newcommand`; otherwise we write it out in all its horribleness.

```
776 \newcommand\netaddress[1][\relax]{%
777   \begingroup
778   \def\@network{}
```

Unfortunately, because of the catcode hackery, we have still to do one stage of relaying within our own code, even if we're using L^AT_EX 2_ε.

```
779   #1\@sanitize\makepace\ \makeactive\@
780   \makeactive\.\makeactive%\@relay@netaddress}%
```

`\@relay@netaddress` finishes the job. It sets `\thenetaddress` for this author to contain the network name followed by the address. As a result of our kerfuffle above, `@` and `%` are active at the point we're entered. We ensure they're active when `\thenetaddress` gets expanded, too. (**WOT?!**)

```
781 \def\@relay@netaddress#1{%
782   \ProtectNetChars
783   \expandafter\protected@xdef
784     \csname thenetaddress\number\authornumber\endcsname
785     {\protect\leavevmode\textrm{\@network}%
786     {\protect\NetAddrChars\net
787       \ignorespaces#1\unskip}}}%
788   \endgroup
789 }
```

`\personalURL` is in essence the same as `\netaddress`, apart from (1) the lack of the eccentric optional argument, and (2) the activation of `'/`.

We could imagine needing an `\URL` command in general. If so, we must remember that the code here would naturally permit a break between the last two characters of `http://`, and some sort of special action must be taken to ensure that it doesn't happen.

```
790 \def\personalURL{\begingroup
791   \@sanitize\makepace\ \makeactive\@
792   \makeactive\.\makeactive%\makeactive\/\@personalURL}%
793 \def\@personalURL#1{%
794   \ProtectNetChars
795   \expandafter\protected@xdef
796     \csname thePersonalURL\number\authornumber\endcsname{%
797     \protect\leavevmode
798     {%
```

```

835 \def\@author{\@defaultauthorlist}

```

`\if@articletitle` `\maketitle` takes an optional “*”; if present, the operation is not defining the title of a paper, merely that of a “business” section (such as the participants at a meeting) that has no credited author or other title. In this case, the command flushes out the latest `\sectitle` (or whatever) but does nothing else.

Provide machinery to skip extra space, even one or more full columns, above the top of an article to leave space to paste up a previous article that has finished on the same page. This is a fall back to accommodate the fact that multiple articles cannot yet be run together easily with $\text{\LaTeX} 2_{\epsilon}$.

```

836 \newif\if@articletitle
837 \def\maketitle{\@ifstar
838   {\@articletitlefalse\@r@maketitle}%
839   {\@articletitletrue\@r@maketitle}%

855   \@thanks
856   \endgroup
857   \setcounter{footnote}{0}
858   \gdef\@thanks{}
859 }

```

3.13 Section titles

The following macros are used to set the large *TUGboat* section heads (e.g. “General Delivery”, “Fonts”, etc.)

Define the distance between articles which are run together:

```
860 \def\secsep{\vskip 5\baselineskip}
```

Note that `\stbaselineskip` is used in the definition of `\sectitlefont`, in $\text{\LaTeX} 2_{\epsilon}$, so that it has (at least) to be defined before `\sectitlefont` is used (we do the whole job).

```

861 \newdimen\stbaselineskip      \stbaselineskip=18\p@
862 \newdimen\stfontheight
863 \settoheight{\stfontheight}{\sectitlefont 0}

```

Declaring section titles; the conditional `\ifSecTitle` records the occurrence of a `\sectitle` command. If (when) a subsequent `\maketitle` occurs, the section title box will get flushed out; as a result of this, one could in principle have a set of `\sectitle` commands in a semi-fixed steering file, and inclusions of files inserted

only as and when papers have appeared. Only the last `\sectitle` will actually be executed.

```

864 \newif\ifSecTitle
865 \SecTitlefalse
866 \newif\ifWideSecTitle
867 \newcommand\sectitle{%
868   \SecTitletrue
869   \@ifstar
870     {\WideSecTitletrue\def\s@ctitle}%
871     {\WideSecTitlefalse\def\s@ctitle}%
872 }

```

`\PreTitleDrop` records the amount of column-space we need to eject before we start any given paper. It gets zeroed after that ejection has happened.

```

873 \newdimen\PreTitleDrop   \PreTitleDrop=\z@

```

The other parameters used in `\@sectitle`; I don't think there's the slightest requirement for them to be registers (since they're constant values, AFAIK), but converting them to macros would remove the essentially useless functionality of being able to change them using assignment, which I'm not about to struggle with just now...

`\AboveTitleSkip` and `\BelowTitleSkip` are what you'd expect; `\strulethickness` is the value to use for `\fboxrule` when setting the title.

```

874 \newskip\AboveTitleSkip   \AboveTitleSkip=12\p@
875 \newskip\BelowTitleSkip   \BelowTitleSkip=8\p@
876 \newdimen\strulethickness  \strulethickness=.6\p@

```

`\@sectitle` actually generates the section title (in a rather generous box). It gets called from `\maketitle` under conditional `\ifSecTitle`; by the time `\@sectitle` takes control, we already have `\SecTitlefalse`. This implementation uses L^AT_EX's `\framebox` command, on the grounds that one doesn't keep a dog and bark for oneself...

```

877 \def\@sectitle #1{%
878   \par
879   \penalty-1000

```

If we're setting a wide title, the stuff will be at the top of a page (let alone a column) but inside a box, so that the separator won't be discardable: so don't create the separator in this case.

```

880   \ifWideSecTitle\else\secsep\fi

972     \end{center}
973     \vspace{.5\baselineskip}}

```

3.14 Headings

Redefine style of section headings to match plain *TUGboat*. Negative before skip suppresses following parindent. (So negate the stretch and shrink too).

These macros are called `*head` in the plain styles.

Relaying via `\TB@startsection` detects inappropriate use of `\section*`. Of course, if (when) *we* use it, we need to avoid that relaying; this can be done by `\letting \TB@startsection` to `\TB@safe@startsection`, within a group.

First the version for use in the default case, when class option `NUMBERSEC` is in effect.

```

974 \if@numbersec
975   \def\section{\TB@startsection{section}%

```

```

976             1%
977             \z@
978             {-8\p@}%
979             {4\p@}%
980             {\normalsize\bf\raggedright\hyphenpenalty=\@M}}
981 \def\subsection{\TB@startsection{subsection}%
982             2%
983             \z@
984             {-8\p@}%
985             {4\p@}%
986             {\normalsize\bf\raggedright\hyphenpenalty=\@M}}
987 \def\subsubsection{\TB@startsection{subsubsection}%
988             3%
989             \z@
990             {-8\p@}%
991             {4\p@}%
992             {\normalsize\bf\raggedright\hyphenpenalty=\@M}}
993 \def\paragraph{\TB@startsection{paragraph}%
994             4%
995             \z@
996             {2.5ex\@plus 1ex}%
997             {-1em}%
998             {\normalsize\bf}}

```

Now the version if class option NONUMBER is in effect, i.e., if `\if@numbersec` is false.

```

999 \else
1000 \setcounter{secnumdepth}{0}
1001 \def\section{\TB@nolimlabel
1002             \TB@startsection{section}%
1003             1%
1004             \z@
1005             {-8\p@}%
1006             {4\p@}%
1007             {\normalsize\bf\raggedright\hyphenpenalty=\@M}}
1008 \def\subsection{\TB@nolimlabel
1009             \TB@startsection{subsection}%
1010             2%
1011             \z@
1012             {-8\p@}%
1013             {-0.5em\@plus-\fontdimen3\font}%

1031             conflicts with nonnumber class option}%
1032   \@startsection#1}%
1033 {\@startsection#1}%
1034 }
1035 \fi
1036 \def\@firstofsix#1#2#3#4#5#6{#1}

```

\TB@safe@startsection is to be used where \section* (etc.) appear in places where the request is OK (because it's built in to some macro we don't fiddle with).

```
1037 \def\TB@safe@startsection#1{\@startsection#1}
```

The SafeSection environment allows use of *-forms of sectioning environments. It's not documented for the general public: it's intended as an editor's facility.

```

1038 \newenvironment{SafeSection}%
1039 {\let\TB@startsection\TB@safe@startsection}%
1040 {}

```

And now for the exciting sectioning commands that L^AT_EX defines but we don't have a definition for (whatever else, we don't want Lamport's originals, which come out 'like the blare of a bugle in a lullaby'²).

The three inappropriate ones are subparagraph (indistinguishable from paragraph), and chapter and part. The last seemed almost to be defined in an early version of these macros, since there was a definition of \l@part. I've not got down to where that came from (or why). If class option NONUMBER is in effect, we also suppress \paragraph, since it has no parallel in the plain style.

```

1041 \if@numbersec
1042 \def\subparagraph{\TB@nosection\subparagraph\paragraph}
1043 \else
1044 \def\paragraph{\TB@nosection\paragraph\subsubsection}
1045 \def\subparagraph{\TB@nosection\subparagraph\subsubsection}
1046 \fi
1047 \def\chapter{\TB@nosection\chapter\section}
1048 \def\part{\TB@nosection\part\section}
1049 \def\TB@nosection#1#2{\TBWarning{class does not support \string#1,
1050   \string#2\space used instead}#2}

```

\l@<sectioning-name> is for table of contents (of an article).

We define new macros to allow easily changing the font used for toc entries (for *TUGboat*, we usually want roman, not bold), and the space between entries. Nelson Beebe's articles are almost the only ones that ever have toc's.

```

1051 \def\TBtocsectionfont{\normalfont}
1052 \newskip\TBtocsectionsapce \TBtocsectionsapce=1.0em\@plus\p@

```

²Thurber, *The Wonderful O*

Don't ask me (RF) why `\l@part` is there; I commented it out because I couldn't understand why it had been left there for me. To be finally deleted in a future release of these macros...

```

1053 %\def\l@part#1#2{\addpenalty{\@secpenalty}%
1054 % \addvspace{2.25em\@plus\p}%
1055 % \begingroup
1056 %   \@tempdima 3em \parindent\z@ \rightskip\z@ \parfillskip\z@
1057 %   {\large \bf \leavevmode #1\hfil \hbox to\@pnumwidth{\hss #2}}\par
1058 %   \nobreak
1059 % \endgroup}
1060 %
1061 \def\l@section#1#2{\addpenalty{\@secpenalty}%
1062 \addvspace{\TBtocsectionspace}%
1063 \@tempdima 1.5em
1064 \begingroup
1065 \parindent\z@ \rightskip\z@ % article style makes \rightskip > 0
1066 \parfillskip\z@
1067 \TBtocsectionfont
1068 \leavevmode\advance\leftskip\@tempdima\hskip-\leftskip#1\nobreak\hfil
1069 \nobreak\hb@xt@\@pnumwidth{\hss #2}\par
1070 \endgroup}

```

3.15 Appendices

Appendices (which are really just another sort of section heading) raise a problem: if the sections are unnumbered, we plainly need to restore the section numbering, which in turn allows labelling of section numbers again (`\TBnolimelabel` happens before the `\refstepcounter`, so its effects get lost ... what a clever piece of design that was). So here we go:

```

1071 \renewcommand\appendix{\par
1072 \renewcommand\thesection{\@Alph@c@section}%
1073 \setcounter{section}{0}%
1074 \if@numbersec
1075 \else
1076 \setcounter{secnumdepth}{1}%
1077 \fi

```

Now: is this the start of an appendix environment? This can be detected by looking at `\@currentenv`; if we are, we need to relay to `\@appendix@env` to pick up the optional argument.

```

1078 \def\@tempa{appendix}
1079 \ifx\@tempa\@currentenv
1080 \expandafter\@appendix@env
1081 \fi
1082 }

```

Here we deal with `\begin{appendix}[\langle app-name \rangle]`

```

1083 \newcommand\app@prefix@section{}
1084 \newcommand\@appendix@env[1][Appendix]{%
1085 \renewcommand\@secntformat[1]{\csname app@prefix@##1\endcsname
1086 \csname the##1\endcsname\quad}%
1087 \renewcommand\app@prefix@section{#1 }%
1088 }

```

Ending an appendix environment is pretty trivial...

```
1089 \let\endappendix\relax
```

3.16 References

If the sections aren't numbered, the natural tendency of the author to cross-reference (which, after all, is one of the things L^AT_EX is for ever being advertised as being good at) can cause headaches for the editor. (Yes it can; believe me ... there's always one.)

The following command is used by each of the sectioning commands to make a following `\ref` command bloop at the author. Even if the author then ignores the complaint, the poor old editor may find the offending `\label` rather more easily.

(Note that macro name is to be read as “*noli me label*” (I don't know the mediæval Latin for ‘label’).

Comment To come (perhaps): detection of the act of labelling, and an analogue of `\ifG@refundefined` for this sort of label

```
1090 \def\TB@nolimelabel{%
1091   \def\@currentlabel{%
1092     \protect\TBWarning{%
1093       Invalid reference to numbered label on page \thepage
1094       \MessageBreak made%
1095     }%
1096     \textbf{?!?}%
1097   }%
1098 }
```

3.17 Title references

This is a first cut at a mechanism for referencing by the title of a section; it employs the delightfully simple idea Sebastian Rahtz has in the `nameref` package (which is part of `hyperref`). As it stands, it lacks some of the bells and whistles of the original, but they could be added; this is merely proof-of-concept.

The name label comes from the moveable bit of the section argument; we subvert the `\@sect` and `\@ssect` commands (the latter deals with starred section commands) to grab the relevant argument.

```
1099 \let\TB@sect\@sect
1100 \let\TB@ssect\@ssect
1101 \def\@sect#1#2#3#4#5#6[#7]#8{%
1102   \def\@currentlabelname{#7}%
1103   \TB@sect{#1}{#2}{#3}{#4}{#5}{#6}[[#7]][#8]%
1104 }
1105 \def\@ssect#1#2#3#4#5{%
1106   \def\@currentlabelname{#5}%
1107   \TB@ssect{#1}{#2}{#3}{#4}{#5}%
1108 }
```

The `\newlabel` command that gets written to the `.aux` file needs to be redefined to have three components to its argument:

```
1109 \def\label#1{%
```

```

1110 \@bsphack
1111 \let\label@gobble
1112 \let\index@gobble
1113 \if@filesw
1114   \protected@write\@auxout{%
1115     {\string\newlabel{#1}{%
1116       {\@currentlabel}{\thepage}{\@currentlabelname}}}%
1117   }%
1118 \fi
1119 \@esphack
1120 }%
1121 }

```

Of course, in the case of a sufficiently mad author, there will be no sectioning commands, so we need to

```
1122 \let\@currentlabelname\@empty
```

References are pretty straightforward, but need three extra utility commands (analogous to the `\@firstof...`, etc., defined in the kernel).

```

1123 \DeclareRobustCommand\ref[1]{\expandafter\@setref
1124   \csname r@#1\endcsname\@firstofthree{#1}}
1125 \DeclareRobustCommand\pageref[1]{\expandafter\@setref
1126   \csname r@#1\endcsname\@secondofthree{#1}}
1127 \DeclareRobustCommand\nameref[1]{\expandafter\@setref
1128   \csname r@#1\endcsname\@thirdofthree{#1}}
1129 \long\def\@firstofthree#1#2#3{#1}
1130 \long\def\@secondofthree#1#2#3{#2}
1131 \long\def\@thirdofthree#1#2#3{#3}

```

3.18 Float captions

By analogy with what we've just done to section titles and the like, we now do our best to discourage hyphenation within captions. We also typeset them in `\small`.

```

1132 \long\def\@makecaption#1#2{%
1133   \vskip\abovecaptionskip
1134   \sbox\@tempboxa{#1: #2}%
1135   \ifdim \wd\@tempboxa >\hsize
1136     \raggedright\hyphenpenalty=\@M \parindent=1em
1137     \small \noindent #1: #2%
1138   \else
1139     \global \@minipagefalse
1140     \hb@xt@\hsize{\hfil\box\@tempboxa\hfil}%
1141   \fi
1142   \vskip\belowcaptionskip}

```

Also use `\small` for the caption labels, and put the label itself (Figure xx) in bold.

```

1143 \def\fnm@figure{\small \bf \figurename\nobreakspace\thefigure}
1144 \def\fnm@table{\small \bf \tablename\nobreakspace\thetable}

```

3.19 Size changing commands

Apart from their 'normal' effects, these commands are

```

1145 \renewcommand\normalsize{%
1146   \@setfontsize\normalsize\@xpt\@xipt
1147   \abovedisplayskip=3\p@\@plus 3\p@\@minus\p@
1148   \belowdisplayskip=\abovedisplayskip
1149   \abovedisplaysshortskip=\z@\@plus 3\p@
1150   \belowdisplaysshortskip=\p@\@plus 3\p@\@minus\p@
1151 }
1152
1153 \renewcommand\small{%
1154   \@setfontsize\small\@ixpt{11}%
1155   \abovedisplayskip=2.5\p@\@plus 2.5\p@\@minus\p@
1156   \belowdisplayskip=\abovedisplayskip
1157   \abovedisplaysshortskip=\z@\@plus 2\p@
1158   \belowdisplaysshortskip=\p@\@plus 2\p@\@minus\p@
1159 }
1160 \renewcommand\footnotesize{%
1161   \@setfontsize\footnotesize\@viiipt{9.5}%

3.21 Some fun with verbatim

The plain *TUGboat* style allows [optional] arguments to its `\verbatim` command. This will allow the author (or editor) to specify a range of exciting features; we would definitely like the numbered verbatim style for code (that facility is reserved for a future version of this package), and the present little bit of code imposes the `\ruled` option on the built-in `verbatim` environment. (Note that we don't yet deal with `verbatim*`, which is in itself an option to the plain original.)

We start by saving various bits and bobs whose operation we're going to subvert.

```
1193 %\let\@TB@verbatim\@verbatim
1194 \let\@TBverbatim\verbatim
1195 \let\@TBendverbatim\endverbatim
```

Impose an optional argument on the environment.

We start the macro with `\par` to avoid a common error: if the optional argument is `\small`, and the document has no blank line before the verbatim block, we don't want that preceding paragraph to be set with `\small`'s line spacing.

(`\obeylines` added to prevent the `\futurelet` from propagating into the body of the verbatim, thus causing lines that start with odd characters (like `#` or even `\`) to behave peculiarly.)

```
1196 \def\verbatim{\par\obeylines
1197   \futurelet\reserved@a\@switch@sqbverbatim}
1198 \def\@switch@sqbverbatim{\ifx\reserved@a[%]
1199   \expandafter\@sqbverbatim\else
1200   \def\reserved@b{\@sqbverbatim[]}\expandafter\reserved@b\fi}
1201 \def\@sqbverbatim[#1]{%
```

The optional argument consists entirely of functions that modify the appearance of the environment. Following the `plain` style, we define the functions we can execute in the optional argument here.

The command `\ruled` tells us that there should be rules above and below the verbatim block.

```
1202   \def\ruled{\let\if@ruled\iftrue}%
```

Then we just execute the ones we've got, and relay to a (hacked) copy of the built-in environment.

```
1203   #1\@TBverbatim}
```

The built-in environment itself relays to `\@verbatim`, which we've subverted to impose our views on appearance.

```
1204 \def\@verbatim{%
```

First, we deal with `\ruled`:

```
1205   \if@ruled\trivlist\item\hrule\kern5\p@\nobreak\fi
```

Now, the code out of the original verbatim environment:

```
1206   \trivlist \item\relax
1207   \if@minipage\else\vskip\parskip\fi
1208   \leftskip\@totalleftmargin\rightskip\z@skip
1209   \parindent\z@\parfillskip\@flushglue\parskip\z@skip
1210   \@@par
1211   \@tempwafalse
```

```

1212 \def\par{%
1213   \if@tempswa
1214     \leavevmode \null \@@par\penalty\interlinepenalty
1215   \else
1216     \@tempswatrue
1217     \ifhmode\@@par\penalty\interlinepenalty\fi
1218   \fi}%
1219 \obeylines \verbatim@font \@noligs
1220 \let\do\@makeother \dospecials
1221 \everypar \expandafter{\the\everypar \unpenalty}%
1222 }%

```

To end the environment, we do everything in reverse order: relay via the copy we made of `\endverbatim`, and then finish off the option changes (again `\ruled` only, so far).

```

1223 \def\endverbatim{\@TBendverbatim
1224   \if@ruled\kern5\p@\hrule\endtrivlist\fi}

```

`\enablemetacode` simply typesets³ something that looks (verbatim) like:

```

<meta-text>

```

as:

```

<meta-text>

```

```

1225 {\makeactive<
1226   \gdef<#1>{\reset@font\ensuremath{\langle}}%
1227   \textit{#1}}%
1228   \ensuremath{\rangle}}
1229 }

```

Finally, we define the `\if` used by the `\ruled` option

```

1230 \let\if@ruled\iffalse

```

3.22 Bibliography

This is more or less copied verbatim from Glenn Paulley's *chicago.sty* (`gnpaulle@bluebox.uwaterloo.ca`). It produces an author-year citation style bibliography, using output from the `BIBTEX` style file based on that by Patrick Daly. It needs extra macros beyond those in standard `LATEX` to function properly. The form of the `bibitem` entries is:

```

\bibitem[\protect\citeauthoryear{Jones, Baker, and Smith}
{Jones et al.}{1990}{key}]...

```

The available citation commands are:

<code>\cite{key}</code>	→ (Jones, Baker, and Smith 1990)
<code>\citeA{key}</code>	→ (Jones, Baker, and Smith)
<code>\citeNP{key}</code>	→ Jones, Baker, and Smith 1990
<code>\citeANP{key}</code>	→ Jones, Baker, and Smith
<code>\citeN{key}</code>	→ Jones, Baker, and Smith (1990)
<code>\shortcite</code>	→ (Jones et al. 1990)
<code>\citeyear</code>	→ (1990)
<code>\citeyearNP</code>	→ 1990

³Or will simply typeset, when we get around to implementation proper

First of all (after checking that we're to use Harvard citation at all), make a copy of L^AT_EX's default citation mechanism.

```
1231 \if@Harvardcite
1232 \let\@internalcite\cite
```

Normal forms.

```

3.26 Font-related definitions and machinery

These are mostly for compatibility with plain `tugboat.sty`

```

1395 \newif\ifFirstPar      \FirstParfalse
1396 \def\smc{\sc}
1397 \def\ninepoint{\small}
1398 </classtail>

```

`\SMC` *isn't* small caps — Barbara Beeton says she thinks of it as “big small caps”. She says (modulo capitalisation of things...):

For the things it's used for, regular small caps are not appropriate — they're too small. Real small caps are appropriate for author names (and are so used in continental bibliographies), section headings, running heads, and, on occasion, words to which some emphasis is to be given. `\SMC` was designed to be used for acronyms and all-caps abbreviations, which look terrible in small caps, but nearly as bad in all caps in the regular text size. The principle of using “one size smaller” than the text size is similar to the design of caps in German — where they are smaller relative to lowercase than are caps in fonts intended for English, to improve the appearance of regular text in which caps are used at the heads of all nouns, not just at the beginnings of sentences.

We define this in terms of the memory of the size currently selected that's maintained in `\@currsize`: if the user does something silly re. selecting fonts, we'll get the wrong results. The following code is adapted from an old version of `resize.sty` by Donald Arseneau and Matt Swift. (Note that the order of examination of `\@currsize` is to get the commonest cases out of the way first.)

```

1399 (*common)
1400 \DeclareRobustCommand\SMC{%
1401   \ifx\@currsize\normalsize\small\else
1402   \ifx\@currsize\small\footnotesize\else
1403   \ifx\@currsize\footnotesize\scriptsize\else
1404   \ifx\@currsize\large\normalsize\else
1405   \ifx\@currsize\Large\large\else
1406   \ifx\@currsize\LARGE\Large\else
1407   \ifx\@currsize\scriptsize\tiny\else
1408   \ifx\@currsize\tiny\tiny\else
1409   \ifx\@currsize\huge\LARGE\else
1410   \ifx\@currsize\Huge\huge\else
1411   \small\SMC@unknown@warning
1412 \fi\fi\fi\fi\fi\fi\fi\fi\fi\fi\fi\fi\fi\fi\fi\fi\fi\fi\fi\fi\fi\fi

```

3.28 Initialization

If we're going to use Harvard-style bibliographies, we set up the bibliography style: the user doesn't get any choice.

```
1473 \if@Harvardcite  
1474   \AtBeginDocument{%  
1475     \bibliographystyle{ltugbib}%  
1476   }  
1477 \fi  
1478 \authornumber\z@  
1479 \let\@signature\@defaultsignature  
1480 \InputIfFileExists{ltugboat.cfg}{\TBInfo{Loading ltugboat  
1481                                           configuration information}}{  
1482 </classtail}
```

4 L^AT_EX 2_ε Proceedings class

```
\@tugclass Make the code of ltugboat.cls (when we load it) say it's really us:
```

```
1483 (*!tugproccls)  
1484 \def\@tugclass{ltugproc}
```

```
\if@proctw@column For the case where we're preparing the preprints, we may not have been able to  
prepare submissions for typesetting in two columns. In this case, therefore, we  
may need the option onecolumn, that will suppress the use of twocolumn setting  
within the article.
```

```
1485 \newif\if@proctw@column \@proctw@columntrue  
1486 \DeclareOption{onecolumn}{\@proctw@columnfalse}
```

```
\if@proc@sober TUG'96 proceedings switched to more sober headings still; so the tug95 option  
\if@proc@numerable establishes the original state. In the absence of any other guidance, we use the '96  
for TUG'97 proceedings, but also allow numbering of sections.
```

```
1487 \newif\if@proc@sober  
1488 \newif\if@proc@numerable  
1489 \DeclareOption{tug95}{%  
1490   \@proc@soberfalse
```

```

1491 \@proc@numerablefalse
1492 }
1493 \DeclareOption{tug96}{%
1494 \@proc@sobertrue
1495 \@proc@numerablefalse
1496 }
1497 \DeclareOption{tug97}{%
1498 \@proc@sobertrue
1499 \@proc@numerabletrue
1500 }
1501 \DeclareOption{tug2002}{%
1502 \@proc@sobertrue
1503 \@proc@numerabletrue
1504 \let\if@proc@numbersec\iftrue
1505 \PassOptionsToClass{numbersec}{ltugboat}%
1506 }

```

`\if@proc@numbersec` If we're in a class that allows section numbering (the actual check occurs after `\ProcessOptions`, we can have the following:

```

1507 \DeclareOption{numbersec}{\let\if@proc@numbersec\iftrue
1508 \PassOptionsToClass{numbersec}{ltugboat}%
1509 }
1510 \DeclareOption{nonumber}{\let\if@proc@numbersec\iffalse
1511 \PassOptionsToClass{nonumber}{ltugboat}%
1512 }

```

`\ifTB@title` If we have a paper for which we want to create a detached title, with an editor's note, and then set the paper separately, we use option `notitle`.

```

1513 \newif\ifTB@title
1514 \DeclareOption{title}{\TB@titletrue}
1515 \DeclareOption{notitle}{\TB@titlefalse}
1516 \AtBeginDocument{\stepcounter{page}}

```

There are these people who seem to think `tugproc` is an option as well as a class...

```

1517 \DeclareOption{tugproc}{%
1518 \ClassWarning{\@tugclass}{Option \CurrentOption\space ignored}%
1519 }

```

All other options are simply passed to `ltugboat`...

```

1520 \DeclareOption*{\PassOptionsToClass{\CurrentOption}{ltugboat}}

```

If there's a `tugproc` defaults file, input it now: it may tell us which year we're to perform for... (Note: this code *is* millenium-proof. It's not terribly classy for years beyond 2069, but then I'm not going to be around then—this will be an interesting task for a future `TEXie`...)

```

1521 \InputIfFileExists{\@tugclass.cfg}{\ClassInfo{ltugproc}%
1522 {Loading ltugproc configuration information}}{}
1523 \@ifundefined{TUGprocExtraOptions}%
1524 {\let\TUGprocExtraOptions\@empty}%
1525 {\edef\TUGprocExtraOptions{,\TUGprocExtraOptions}}

```

`\tugProcYear` Now work out what year it is

```
1526 \@tempcnta\year
1527 \ifnum\@tempcnta<2000
1528   \divide\@tempcnta by100
1529   \multiply\@tempcnta by100
1530   \advance\@tempcnta-\year
1531   \@tempcnta-\@tempcnta
1532 \fi
```

And use that for calculating a year for us to use.

```
1533 \edef\@tempa{\noexpand\providecommand\noexpand\tugProcYear
1534             {\ifnum10>\@tempcnta0\fi\the\@tempcnta}}
1535 \@tempa
1536 \ClassInfo{ltugproc}{Class believes year is
1537   \expandafter\ifnum\tugProcYear<2000 19\fi\tugProcYear
1538   \@gobble}
```

Check that this is a “sensible year” (one for which we have a class option defined). If not, make it a ‘suitable’ year, in particular, one that allows numbering sections.

```
1539 \expandafter\ifx\cname ds@tug\tugProcYear\endcsname\relax
1540   \def\tugProcYear{2002}\fi
```

Now execute the default ‘year’ option and get on with processing. Note that this command gets ignored if the configuration file specifies a silly year.

```
1541 \ExecuteOptions{tug\tugProcYear,title\TUGprocExtraOptions}
1542 \ProcessOptions
1543 \if@proc@numbersec
1544   \if@proc@numerable
1545   \else
1546     \ClassWarning{\@tugclass}{This year’s proceedings may not have
1547       numbered sections}%
1548   \fi
1549 \fi
```

Call `ltugboat`, adding whichever section numbering option is appropriate

```
1550 \LoadClass[\if@proc@numbersec numbersec\else nonumber\fi]{ltugboat}
```

4.1 Proceedings titles

`\maketitle` There’s no provision for ‘section titles’ in proceedings issues, as there are in *TUGboat* proper. Note the tedious L^AT_EX bug-avoidance in the `\@TB@test@document` macro.

```
1551 \def\maketitle{%
1552   \begingroup
1553     first, a bit of flim-flam to generate an initial value for \rhAuthor (unless the
1554     user’s already given one with a \shortAuthor comand).

`abstract` Save the contents of the abstract environment in the token register `\abstract@toks`.
`\if@abstract` We need to do this, as otherwise it may get 'typeset' (previously, it got put in a
`\abstract@toks` box) before `\begin{document}`, and experiments prove that this means our shiny new `\SMC` doesn't work in this situation.

If you need to understand the ins and outs of this code, look at the place I lifted it from: `tabularx.dtx` (in the tools bundle). The whole thing pivots on having stored the name of the 'abstract' environment in `\@abstract@`

```

1629 \newtoks\abstract@toks \abstract@toks{}
1630 \let\if@abstract\iffalse
1631 \def\abstract{%

```

we now warn unsuspecting users who provide an `abstract` environment *after* the `\maketitle` that would typeset it...

```

1632 \ifTB@madetitle

1642 \fi
1643 \global\let\if@abstract\iftrue
1644 {\ifnum0='}\fi
1645 \@abstract@getbody}
1646 \let\endabstract\relax

    \@abstract@getbody gets chunks of the body (up to the next occurrence of
    \end) and appends them to \abstract@toks. It then uses \@abstract@findend
    to detect whether this \end is followed by {abstract}

1647 \long\def\@abstract@getbody#1\end{%
1648 \global\abstract@toks\expandafter\the\abstract@toks#1}%
1649 \@abstract@findend}

    Here we've got to \end in the body of the abstract. \@abstract@findend
    takes the 'argument' of the \end do its argument.

1650 \def\@abstract@findend#1{%
1651 \def\@tempa{#1}%

    If we've found an 'end' to match the 'begin' that we started with, we're done
    with gathering the abstract up; otherwise we stuff the end itself into the token
    register and carry on.

1652 \ifx\@tempa\@abstract@
1653 \expandafter\@abstract@end
1654 \else

    It's not \end{abstract} — check that it's not \end{document} either (which
    signifies that the author's forgotten about ending the abstract)

1655 \def\@tempb{document}%
1656 \ifx\@tempa\@tempb

4.2 Section divisions

Neither sections nor subsections are numbered by default in the proceedings style: note that this puts a degree of stress on authors' natural tendency to reference sections, which is a matter that needs attention. The class option NUMBERSEC once again numbers the sections (and noticeably changes the layout).

```

1719 \if@proc@numbersec
1720 \else
1721   \setcounter{secnumdepth}{0}
1722 \fi

```

Otherwise, the `\section` command is pretty straightforward. However, the `\subsection` and `\subsubsection` are run-in, and we have to remember to have negative stretch (and shrink if we should in future choose to have one) on the `<afterskip>` parameter of `\@startsection`, since the whole skip is going to end up getting negated. We use `\TB@startsection` to detect inappropriate forms.

```

1723 \if@proc@numbersec
1724 \else
1725   \if@proc@sober
1726     \def\section
