2 Introduction

This file contains all the macros for typesetting *TUGboat* with both plain T_EX and L^AT_EX 2_≤.

2.1 Summary of control sequences

Abbreviations. Just a listing with indications of expansion where that may not be obvious. For full definitions, see real code below (Section 3.4).

\AllTeX	(L ^A)T _E X
\AMS	American Mathematical Society
\AmSTeX	
\aw	A-W (abbreviation for Addison-Wesley)
\API	
\AW	Addison-Wesley

\VorTeX	
\XeT	
\XeTeX	reflected and lowered first ‘E’
\XeLaTeX	with extra space before ‘L’
\XML	
\WEB	
\WEAVE	
\WYSIWYG	

Macros for things that are slightly more significant.

\NoBlackBoxes	turns off marginal rules marking overfull boxes
\BlackBoxes	turns them back on
\newline	horizontal glue plus a break
\ifundefined#1	checks argument with \csname against \relax
\topsmash	smashes above baseline (from AMSTeX)
\botsmash	smashes below baseline (from AMSTeX)
\smash	smashes both (from plain)

\ulap	lap upwards
\dlap	lap downwards
\xlap	reference point at center horizontally; 0 width
\ylap	reference point at center vertically; 0 height, depth
\zlap	combination \xlap and \ylap
\basezero	to avoid insertion of baselineskip and lineskip glue
\nullhrule	empty \hrule
\nullvrule	empty \vrule
\makestrut [#1;#2]	ad hoc struts; #1=height, #2=depth
\today	today's date
\SetTime	converts \time to hours, minutes
\now	displays time in hours and minutes
\Now	shows current date and time
\ifPrelimDraft	flag to indicate status as preliminary draft
\rtitlex	<i>TUGboat</i> volume and number info for running head
\midrttitle	information for center of running head
\HorzR@gisterRule	pieces of registration marks ('trimmarks')
\DownShortR@gisterRule	
\UpShortR@gisterRule	
\ttopregister	top registration line with 'T' in center
\tbotregister	bottom registration line with inverted 'T' in center
\topregister	register actually used
\botregister	
\raggedskip	
\raggedstretch	
\raggedparfill	
\raggedspaces	
\raggedright	
\raggedleft	
\raggedcenter	
\normalspaces	
\raggedbottom	
\bull	square bullet
\cents	'cents' sign
\Dag	superscripted dagger
\careof	c/o
\sfrac	slashed fraction (arguments optionally separated by a slash)
\cs	control sequence name
\env	environment name
\meta	meta-argument name

<code>\dash</code>	<code>\meta{name}→⟨name⟩</code>
	en-dash surrounded by thinspace; only breakable AFTER
<code>\Dash</code>	em-dash, as above
<code>\hyph</code>	permit automatic hyphenation after an actual hyphen
<code>\slash</code>	‘breakable’ slash
<code>\nth</code>	for obtaining ‘1 st ’, ‘2 nd ’, 3 rd , etc.
<code>\tubissue</code>	gets \TUB followed by volume and issue numbers
<code>\xEdNote</code>	Editor’s Note:
<code>\Review:</code>	Review: (for title of book review article)
<code>\reviewitem</code>	begin data for item being reviewed
<code>\revauth</code>	with one argument, author(s) of item being reviewed
<code>\revtitle</code>	with one argument, title of ...
<code>\revpubinfo</code>	with one argument, other info pertaining to ...
<code>\endreviewitem</code>	end data for item being reviewed
<code>\booktitle</code>	with one argument, format book title in text
<code>\Input</code>	\input with some other bookkeeping for case where multiple articles are put together
<code>\TBremark</code>	reminder to <i>TUGboat</i> editorial staff
<code>\TBEnableRemarks</code>	enable \TBmarks (normally suppressed)
<code>\pagexref</code>	used to write out page numbers to screen and external files
<code>\pagexrefON</code>	
<code>\pagexrefOFF</code>	
<code>\xrefto</code>	used for symbolic cross-reference to other pages in <i>TUGboat</i>
<code>\xreftoON</code>	
<code>\xreftoOFF</code>	
<code>\TBdriver</code>	marks code which only takes effect when articles are run together in a driver file
<code>\signaturemark</code>	items for signatures
<code>\signaturewidth</code>	

3 L^AT_EX 2_ε *TUGboat* class file

3.1 Setup and options

Check for reloading. Hmm... Does this happen with L^AT_EX 2_ε classes? Probably, in fact, as well that it doesn’t, since the \tugstyinit referenced here doesn’t exist; however, it’s possible that we might need a similar mechanism in the future, so we retain its skeleton, without fleshing out the \tugstyinit bones.

```
22 ⟨*tugboatcls⟩
23 \csname tugstyloaded@\endcsname
24 \def\tugstyloaded@{\tugstyinit\endinput}
```

Acquire a name for this class if we don't already have one (by virtue of having been loaded by `tugproc.cls`). This name will be used in error messages and the like.

```
25 \providecommand{\@tugclass}{\tugboat}
```

Warnings/error messages/information messages — if we're using L^AT_EX 2 _{ε} we can use the `\Class*` commands:

```
26 \def\TBInfo{\ClassInfo{\@tugclass}}
27 \def\TBError{\ClassError{\@tugclass}}
28 \def\TBWarning{\ClassWarning{\@tugclass}}
29 \def\TBWarningNL{\ClassWarningNoLine{\@tugclass}}
```

draft vs. preprint vs. final.

```
30 \newif\ifpreprint
31 \def\preprint{\preprinttrue}
32 \DeclareOption{draft}{%
33   \AtEndOfClass{%
34     \setcounter{page}{901}%
35     %
36     % Put a question mark into the page number in draft mode.
37     \let\tuborigthe\page = \the\page
38     \def\the\page{%
39       \ifnum\value{page}>900
40         \textsl{?},\@arabic{\numexpr\the\c@page-900\relax}%
41       \else
42         \arabic{page}%
43       \fi}%
44     %
45     \BlackBoxes
46     \def\MakeRegistrationMarks{}%
47     \PrelimDrafttrue
48   }%
49 }
50 \DeclareOption{preprint}{%
51   \preprinttrue
52 }
53 \DeclareOption{final}{%
54   \AtEndOfClass{%
55     \let\the\page=\tuborigthe\page
56     \NoBlackBoxes
57     \PrelimDraftfalse
58     \tubrunningfull
59   }%
60 }
```

The rules dictate that the output should be set using a 10pt base font.

```
61 \DeclareOption{11pt}{%
62   \TBWarning{The \@tugclass\space class only supports 10pt fonts:%
63     \MessageBreak option \CurrentOption\space ignored}%
64 }
```

```

64 }
65 \DeclareOption{12pt}{\csname ds@11pt\endcsname}
    Similarly, ignore one/two-side options.

66 \DeclareOption{oneside}{\TBTWarning{Option \CurrentOption\space ignored}}
67 \DeclareOption{twoside}{\ds@oneside}

```

There are these people who seem to think `tugproc` is an option rather than a class... (Note that it's already been filtered out if we were calling from `ltugproc`.)

```

68 \DeclareOption{tugproc}{%
69   \TBTWarning{Option \CurrentOption\space ignored: use class ltugproc
70     instead of \@tugclass}%
71 }

```

Option `rawcite` (the default) specifies the default citation mechanism (as built-in to L^AT_EX); option `harvardcite` specifies the author-date citation mechanism defined in section 3.23 below.

```

72 \DeclareOption{rawcite}{\let\if@Harvardcite\iffalse}
73 \DeclareOption{harvardcite}{\let\if@Harvardcite\iftrue}

```

Option `extralabel` (the default) specifies that the publication years of two successive references with otherwise identical labels will be tagged with distinguishing letters; option `noextralabel` causes those letters to be suppressed. Note that (a) no two references will in any case have the same labels in the default (plain) `rawcite` setup, and that (b) the distinguishing letters appear in the labels themselves — the even remotely intelligent reader should be able to work out the correspondence one with the other...

```

74 \DeclareOption{extralabel}{\let\UseExtraLabel\@firstofone}
75 \DeclareOption{noextralabel}{\let\UseExtraLabel\@gobble}

```

The section-numbering style, so that we can allow the same heading layout as in the plain macros.

```

76 \DeclareOption{numbersec}{\let\if@numbersec\iftrue}
77 \DeclareOption{nonumber}{\let\if@numbersec\iffalse}

```

Minimal running headers/footers contain just the TUGboat volume/issue identification and page numbers. ‘runningfull’ is the default, and includes title and author. ‘runningoff’ makes both headers and footers empty.

```

78 \DeclareOption{runningoff}{\AtEndOfClass{\@tubrunningoff}}
79 \DeclareOption{runningminimal}{\AtEndOfClass{\@tubrunningminimal}}
80 \DeclareOption{runningfull}{\AtEndOfClass{\@tubrunningfull}}

```

`\if@tubtwocolumn` Occasionally (`tb107jackowski`, and past conference preprints), we need the option `onecolumn`. For alternative approaches to one-column articles, see `tb92hagen-euler` and `tb78milo`.

```

81 \newif\if@tubtwocolumn \tubtwocolumntrue
82 \DeclareOption{onecolumn}{\tubtwocolumnfalse}

```

Any other options, we pass on to `article.cls` before we load it:

```
83 \DeclareOption*{\PassOptionsToClass{\CurrentOption}{article}}
```

Request default options (draft mode, standard citation, numbered sections, etc.), process all options, and then get the base document class on top of which we reside, namely `article`. Always call `article` with the `twoside` option, since we want the ability to have odd/even headers/footers.

```
84 \ExecuteOptions{draft,extralabel,numbersec,rawcite,runningminimal}
85 \ProcessOptions
86 \LoadClass[twoside]{article}
```

Various fonts used throughout. Some effort has been made to suppress these things with explicit sizes in the macro name (`\tensl` is an example below), but keeping in step with the documentation is one thing that restricts such a move.

```
87 \def\sectitlefont{\fontfamily\sfdefault\fontseries{bx}\fontshape{n}%
88           \fontsize@\xviipt\stbaselineskip\selectfont}
89 \def\tensl{\fontseries{m}\fontshape{sl}\fontsize@\xipt\@xiipt
90           \selectfont}
```

This font selection command is used *only* for the ‘Editor’s Note’ introduction to notes; sadly it makes explicit reference to CMR, and Barbara Beeton has agreed that the reference may be constructed to use the current family such that, if no upright italic is defined, ordinary italics are used. A project for later…

```
91 \def\EdNoteFont{\fontfamily{cmr}\fontseries{m}\fontshape{ui}%
92           \selectfont}
93 \IfFileExists{ltugboatcls}
```

If Ulrik Vieth’s `mflogo.sty` is around, we’ll use it. Otherwise (pro tem, at least) we’ll warn the user and define the absolute minimum of machinery that *TUGboat* requires (that which was used prior to the invention of L^AT_EX 2_ε).

```
94 \IfFileExists{mflogo.sty}%
95   {\RequirePackage{mflogo}}%
96 \IfFileExists{ltugcommn} {\TBUWarning{ltugcommn}}
97 \IfFileExists{ltugcommn} {\PackageWarning{ltugcommn}}
98 \IfFileExists{ltugcommn} {\MessageBreak
99   {Package mflogo.sty not available --\MessageBreak
100     Proceeding to emulate mflogo.sty}}
101 \DeclareRobustCommand{\logofamily}{%
102   \not@math@alphabet{\logofamily}\relax
103   \fontencoding{U}\fontfamily{\logofamily}\selectfont}
104 \DeclareTextFontCommand{\textlogo}{\logofamily}
105 \def\MF{\textlogo{META}\-\textlogo{FONT}\@\@}
106 \def\MP{\textlogo{META}\-\textlogo{POST}\@\@}
107 \DeclareFontFamily{U}{\logofamily}{}
108 \DeclareFontShape{U}{\logofamily}{m}{n}{%
109   <8><9>gen*logo%
110   <10><10.95><12><14.4><17.28><20.74><24.88>logo10%
111 }{%
112 \DeclareFontShape{U}{\logofamily}{m}{sl}{%
```

```

113     <8><9>gen*logos1%
114     <10><10.95><12><14.4><17.28><20.74><24.88>logos110%
115     }{%
116     \DeclareFontShape{U}{logo}{m}{it}{%
117     <->ssub*logo/m/s1%
118     }{%
119     }

```

3.2 Resetting at start of paper

\ResetCommands
\AddToResetCommands
\StartNewPaper

We store a set of commands that should be executed at the start of each paper, before any paper-specific customisation. These commands (stored in the token register \ResetCommands) include things such as resetting section and footnote numbers, re-establishing default settings of typesetting parameters, and so on. The user (or more typically, editor) may execute the commands by using the command \StartNewPaper. Things I've not yet thought of may be added to the list of commands, by

```

120 \newtoks\ResetCommands
121 \ResetCommands{%
122   \setcounter{part}{0}%
123   \setcounter{section}{0}%
124   \setcounter{footnote}{0}%
125   \authornumber\z@%
126 }
127 \newcommand{\AddToResetCommands}[1]{%
128   \AddToResetCommands\expandafter{\AddToResetCommands#1}%
129 }

```

3.3 Helpful shorthand (common code with Plain styles)

\makeescape, ..., \makecomment allow users to change the category code of a single character a little more easily. These require that the character be addressed as a control sequence: e.g., \makeescape{/} will make ‘/’ an escape character.

```

130 <!*!latex>
131 \def\makeescape#1{\catcode`#1=0 }
132 \def\makebgroup#1{\catcode`#1=1 }
133 \def\makeegroup#1{\catcode`#1=2 }
134 \def\makemath #1{\catcode`#1=3 }
135 </!*!latex>
136 <!*latex>
137 \def\makeescape#1{\catcode`#1=\z@}
138 \def\makebgroup#1{\catcode`#1=\@ne}
139 \def\makeegroup#1{\catcode`#1=\tw@}
140 \def\makemath #1{\catcode`#1=\thr@@}
141 </!*latex>
142 \def\makealign #1{\catcode`#1=4 }
143 \def\makeeol #1{\catcode`#1=5 }
144 \def\makeparm #1{\catcode`#1=6 }

```

```

145 \def\makesup #1{\catcode`#1=7 }
146 \def\makesub #1{\catcode`#1=8 }
147 \def\makeignore#1{\catcode`#1=9 }
148 \def\makespace #1{\catcode`#1=10 }
149 \def\makeletter#1{\catcode`#1=11 }
150 \chardef\other=12
151 \let\makeother\@makeother
152 \def\makeactive#1{\catcode`#1=13 }
153 \def\makecomment#1{\catcode`#1=14 }

```

\savecat#1 and \restorecat#1 will save and restore the category of a given character. These are useful in cases where one doesn't wish to localize the settings and therefore be required to globally define or set things.

```

154 \def\savecat#1{%
155   \expandafter\xdef\csname string#1savedcat\endcsname{\the\catcode`#1}}
156 \def\restorecat#1{\catcode`#1=\csname string#1savedcat\endcsname}
157 <!latex>\savecat\@%
158 <!latex>\makeletter\@%

```

\SaveCS#1 and \RestoreCS#1 save and restore ‘meanings’ of control sequences. Again this is useful in cases where one doesn't want to localize or where global definitions clobber a control sequence which is needed later with its ‘old’ definition.

```

159 \def\SaveCS#1{\expandafter\let\csname saved@@#1\expandafter\endcsname
160   \csname#1\endcsname}
161 \def\RestoreCS#1{\expandafter\let\csname#1\expandafter\endcsname
162   \csname saved@@#1\endcsname}

```

To distinguish between macro files loaded

```

163 \def\plaintubstyle{plain}
164 \def\latextubstyle{latex}

```

Control sequences that were first defined in L^AT_EX 2 _{ε} of 1995/06/01 (or later), but which we merrily use. Only define if necessary:

```

165 \providecommand{\hbox@{\hbox to}%
166 \providecommand{\textsuperscript}[1]{\ensuremath{^{\m@th
167   ^{\mbox{\scriptsize\sf@size\z@}}%
168     \selectfont #1}}}}

```

(Note that that definition of \textsuperscript isn't robust, but probably doesn't need to be... What's more, it doesn't appear in the mythical 2.09 version of the package.)

3.4 Abbreviations and logos

Font used for the METAFONT logo, etc.

```

169 \DeclareRobustCommand{\AllTeX}{(\La kern-.075em)\kern-.075em\TeX}
170 \def\AMS{American Mathematical Society}
171 \def\AmS{$\mathcal{A}$}\kern-.1667em\lower.5ex\hbox

237 % is hacked from its definition of \cs{LaTeX}; it allows slants (for
238 % example) to propagate into the raised (small) 'A':
239 % \begin{macrocode}
240 \DeclareRobustCommand{\La}%
241   {\kern-.36em
242     \setbox0\hbox{T}%
243     \vbox to\ht0{\hbox{$m@th$%
244                 \csname S@\f@size\endcsname
245                 \fontsize\sf@size\z@
246                 \math@fontsfalse\selectfont
247                 A}%
248                 \vss}%
249   }%

```

We started with the intention that we wouldn't redefine \LaTeX when we're running under it, so as not to trample on an existing definition. However, this proves less than satisfactory; a single logo may be OK for the run of documents, but for *TUGboat*, we find that something noticeably better is necessary; see section 3.11.

XeTeX requires reflecting the first E, hence we complain if the graphics package is not present. (For plain documents, this can be loaded via Eplain.) Also, at Barbara's suggestion, if the current font is slanted, we rotate by 180 instead of reflecting so there is at least a chance to look ok. (The magic values here seem more or less ok for cmsl and cmti.)

3.6 Utility registers and definitions

We define a few scratch registers (and the like) for transient use; they're all paired: an internal one (`\T@st*`) and an external one (`\Test*`).

Comment: Exercise for an idle day: find whether all these are necessary, or whether we can use the L^AT_EX temporaries for some (or all) of the `\T@st*` ones.

Comment: (bb) All these registers are used in the plain version, `tugboat.sty`.

381 \newbox\T@stBox 382 \newcount\T@stCount 383 \newdimen\T@stDimen	\newbox\TestBox \newcount\TestCount \newdimen\TestDimen
---	---

```
384 \newif\ifT@stIf           \newif\ifTestIf
```

Control sequence existence test, stolen from TeXbook exercise 7.7 (note that this provides functionality that in some sense duplicates something within L^AT_EX).

```
385 \def\ifundefined#1{\expandafter\ifx\csname#1\endcsname\relax }
```

L^AT_EX conventions which are also useful here.

3.7 Ragged right and friends

\raggedskip Plain TeX's definition of \raggedright doesn't permit any stretch, and results in too many overfull boxes. We also turn off hyphenation. This code lies somewhere between that of Plain TeX and of LATEX.

\raggedstretch

\raggedparfill

\raggedspaces

```
434 \\newdimen\\raggedskip    \\raggedskip=\\z@%
435 \\newdimen\\raggedstretch \\raggedstretch=5em    % ems of font set now (10pt)
436 \\newskip\\raggedparfill  \\raggedparfill=\\z@\\@plus 1fil
437 \\def\\raggedspaces{\\spaceskip=.3333em \\relax \\xspaceskip=.5em \\relax }
```

\raggedright Some applications may have to add stretch, in order to avoid all overfull boxes.

\raggedleft We define the following uses of the above skips, etc.

\raggedcenter

\normalspaces

```
438 \\def\\raggedright{%
439     \\nohyphens
440     \\rightskip=\\raggedskip\\@plus\\raggedstretch \\raggedspaces
441     \\parfillskip=\\raggedparfill
442 }
443 \\def\\raggedleft{%
444     \\nohyphens
445     \\leftskip=\\raggedskip\\@plus\\raggedstretch \\raggedspaces
446     \\parfillskip=\\z@skip
447 }
448 \\def\\raggedcenter{%
449     \\nohyphens
450     \\leftskip=\\raggedskip\\@plus\\raggedstretch
451     \\rightskip=\\leftskip \\raggedspaces
```

```

452 \parindent=\z@ \parfillskip=\z@skip
453 }
454 \def\normalspaces{\spaceskip\z@skip \xspaceskip\z@skip}

```

Miscellaneous useful stuff. Note that L^AT_EX 2 _{ε} defines a robust `\,`, but that we provide a new definition of `\~` by redefining its robust underpinnings¹ (based on the version in AMS-T_EX — the L^AT_EX 2 _{ε} version has `\leavevmode` and doesn't care about surrounding space).

```

455 \DeclareRobustCommand{\nobreakspace}{%
456 \unskip\nobreak\ignorespaces}

```

Plain T_EX defines `\newbox` as `\outer`. We solemnly preserve the following, which removes the `\outerness`; of course, we carefully exclude it from what we generate... (`\outerness` is a spawn of the devil, is it not? Barbara Beeton responded to the previous sentence “`\outerness` has its place: it avoids register buildup, hence running out of memory”. In another context, David Carlisle remarked that an error control mechanism that causes more confusing errors than it prevents is rather a poor one. This is perhaps not the place to conduct a serious debate...)

3.9 Dates, volume and issue numbers, etc.

Dates and other items which identify the volume and issue. \issueseqno is a sequential issue number starting from the first issue published; volume 15,4 has \issueseqno=45.

\vol 19, 1.

To use: \issdate March 1998.

\issueseqno=58

Starting with volume 23 (nominal 2002), we have \issyear instead of \issdate, because issues don't have months any more.

For production, these are set in a separate file, `tugboat.dates`, which is issue-specific.

Comment: I would like to make the code read a file `tugboat.dates` in the current directory or its parent. This is easy except under ‘odd’ operating systems (VMS is an example that springs to mind, RISCos may be even worse) whose syntax is out of the ordinary.

```

556 \newcount\issueseqno           \issueseqno=-1

In `LaTeX2E`, `twoside` option is forced on when `article.cls` is loaded.

3.11 Messing about with the `LaTeX` logo

Barbara Beeton's pleas for `LaTeX` logos that look right in any font shape provoked me to generate the following stuff that is configurable.

Here's the command for the user to define a new version. The arguments are font family, series and shape, and then the two kern values used in placing the raised 'A' of `LaTeX`.

```

736 \newcommand{\DeclareLaTeXLogo}[5]{\expandafter\def
737   \csname @LaTeX@#1/#2/#3\endcsname{{#4}{#5}}}

```

The default values are as used in the source of `LaTeX` itself:

```
738 \def\@LaTeX@default{{.36}{.15}}
```

More are defined in the initial version, for bold CM sans (which is used as `\SecTitleFont`), and CM italic medium and bold, and Bitstream Charter (which Nelson Beebe likes to use). Duplicate for Latin Modern.

```

739 \DeclareLaTeXLogo{cmss}{bx}{n}{.3}{.15}
740 \DeclareLaTeXLogo{lms}{bx}{n}{.3}{.15}
741 %
742 \DeclareLaTeXLogo{cmr}{m}{it}{.29}{.2}
743 \DeclareLaTeXLogo{lmr}{m}{it}{.29}{.2}
744 %
745 \DeclareLaTeXLogo{cmr}{m}{s1}{.29}{.15}
746 \DeclareLaTeXLogo{lmr}{m}{s1}{.29}{.15}
747 %
748 \DeclareLaTeXLogo{cmr}{bx}{s1}{.29}{.2}
749 \DeclareLaTeXLogo{lmr}{bx}{it}{.29}{.2}
750 %
751 \DeclareLaTeXLogo{cmr}{bx}{s1}{.29}{.2}
752 \DeclareLaTeXLogo{lmr}{bx}{s1}{.29}{.2}
753 %
754 \DeclareLaTeXLogo{bch}{m}{n}{.2}{.08}
755 \DeclareLaTeXLogo{bch}{m}{it}{.2}{.08}

```

Redefine `\LaTeX` to choose the parameters for the current font, or to use the default value otherwise:

```

756 \DeclareRobustCommand{\LaTeX}{\expandafter\let\expandafter\reserved@a
757   \csname @LaTeX@\f@family/\f@series/\f@shape\endcsname
758   \ifx\reserved@a\relax\let\reserved@a\@LaTeX@default\fi
759   \expandafter\@LaTeX\reserved@a}

```

Here's the body of what was originally `\LaTeX`, pulled out with its roots dripping onto the smoking ruin of original L^AT_EX, and then bits stuck in on the side.

`\@LaTeX@default` provides parameters as one finds in the original; other versions are added as needed.

```

760 \newcommand{\@LaTeX}[2]{%
761   \%wlog{latex logo family=\f@family/\f@series/\f@shape -> #1, #2.}%
762   L\kern-#1em
763   {\sbox\z@\T%
764     \vbox to\ht0{\hbox{$\m@th$%
765       \csname S@\f@size\endcsname
766       \fontsize\sf@size\z@
767       \math@fontsfalse\selectfont
768       A}%
769       \vss}%
770   }%
771   \kern-#2em%
772   \TeX}

```

3.12 Authors, contributors, addresses, signatures

An article may have several authors (of course), so we permit an `\author` command for each of them. The names are then stored in a set of `\csnames` called `\author1`, `\author2`, ... Similarly, there are several `\address<n>` and `\netaddress<n>` and `\PersonalURL<n>` commands set up for each article.

Comment: I would like to make provision for several authors at the same address, but (short of preempting the * marker, which it would be nice to retain so as to preserve compatibility with the `plain` style) I'm not sure how one would signal it.

```
773 \def\theauthor#1{\csname theauthor#1\endcsname}
774 \def\theadress#1{\csname theaddress#1\endcsname}
775 \def\thenetaddress#1{\csname thenetaddress#1\endcsname}
776 \def\thePersonalURL#1{\csname thePersonalURL#1\endcsname}
```

The standard way of listing authors is to iterate from 1 to `\count@` and to pick the author names as we go.

```
777 {!!\def\newcount{\tempcnta
778 \def\@defaultauthorlist{%
779   \getauthorlist\firstofone
780 }}
```

`\getauthorlist` processes the author list, passing every bit of stuff that needs to be typeset to the macro specified as its argument.

```
781 \def\@getauthorlist#1{%
782   \count@\authornumber
783   \advance\count@ by -2
784   \tempcnta0
```

Loop to output the first $n - 2$ of the n authors (the loop does nothing if there are two or fewer authors)

```
785 \loop
786   \ifnum\count@>0
787     \advance\tempcnta by \cne
788     #1{\ignorespaces\theauthor{\number\tempcnta}\unskip, }%
789     \advance\count@ by \m@ne
790   \repeat
791   \count@\authornumber
792   \advance\count@ by -\tempcnta
793   \ifnum\authornumber>0
```

If there are two or more authors, we output the penultimate author's name here, followed by 'and'

```
794   \ifnum\count@>1
795     \count@\authornumber
796     \advance\count@ by \m@ne
797     #1{\ignorespaces\theauthor{\number\count@}\unskip\ and }%
798   \fi
```

Finally (if there were any authors at all) output the last author's name:

```
799     #1{\ignorespaces\theauthor{\number\authornumber}\unskip}
800     \fi
801 }
```

Signature blocks. The author can (in principle) define a different sort of signature block using `\signature`, though this could well cause the editorial group to have collective kittens (unless it had been discussed in advance...)

```
802 \def\signature#1{\def\@signature{#1}}
803 \def\@signature{\@defaultsignature}
```

`\@defaultsignature` loops through all the authors, outputting the details we have about that author, or (if we're in a sub-article) outputs the contributor's name and closes the group opened by `\contributor`. It is (as its name implies) the default body for `\makesignature`

```
804 \def\@defaultsignature{%
805     \let\thanks\@gobble

853   }%
854   \ifnum\authornumber<0 \endgroup\fi
855 }
856 \def\signaturemark{\leavevmode\llap{$\diamond$}\enspace}
```

Now all the awful machinery of author definitions. `\authornumber` records the number of authors we have recorded to date.

```
857 \newcount\authornumber
858 \authornumber=0
```

`\author` ‘allocates’ another author name (by bumping `\authornumber`) and also sets up the address and netaddress for this author to produce a warning and to prevent oddities if they’re invoked. This last assumes that invocation will be in the context of `\signature` (`ltugboat.cls`) or `\maketitle` (`ltugproc.cls`); in both cases, invocation is followed by a line break (tabular line break `\` in `ltugproc`, `\endgraf` in `\makesignature` in `ltugboat`).

```
859 \def\author{%
860   \global\advance\authornumber\@ne
861   \TB@author
862 }
```

`\contributor` is for a small part of a multiple-part article; it begins a group that will be ended in `\makesignature`

```
863 \def\contributor{%
864   \begingroup
865   \authornumber\m@ne
866   \TB@author
```

```
867 }
```

Both ‘types’ of author fall through here to set up the author name and to initialise author-related things. `\EDITORno*` commands allow the editor to record that there’s good reason for an *address* or *netaddress* not to be there (the *personalURL* is optional anyway).

```
868 \def\TB@author#1{%
869   \expandafter\def\csname theauthor\number\authornumber\endcsname
870     {\ignorespaces#1\unskip}%
871   \expandafter\def\csname theaddress\number\authornumber\endcsname
872     {\TBTWarningNL{Address for #1\space missing}\@gobble}%
873   \expandafter\def\csname thenetaddress\number\authornumber\endcsname
874     {\TBTWarningNL{Net address for #1\space missing}\@gobble}%
875   \expandafter\let\csname thePersonalURL\number\authornumber\endcsname
876     \@gobble
877 }
878 \def\EDITORnoaddress{%
879   \expandafter\let\csname theaddress\number\authornumber\endcsname
880     \@gobble
881 }
882 \def\EDITORnonetaddress{%
883   \expandafter\let\csname thenetaddress\number\authornumber\endcsname
884     \@gobble
885 }
```

`\address` simply copies its argument into the `\theaddress<n>` for this author.

```
886 \def\address#1{%
887   \expandafter\def\csname theaddress\number\authornumber\endcsname
888     {\leavevmode\ignorespaces#1\unskip}}
```

`\network` is for use within the optional argument of `\netaddress`; it defines the *name* of the network the user is on.

Comment: I think this is a fantasy, since everyone (in practice, nowadays) quotes an internet address. In principle, there are people who will quote X.400 addresses (but they’re few and far between) and I have (during 1995!) seen an address with an UUCP bang-path component on `comp.text.tex`, but *really!*

```
889 \def\network#1{\def\@network{#1: }}
```

`\netaddress` begins a group, executes an optional argument (which should not, presumably, contain global commands) and then relays to `\@relay@netaddress` with both `@` and `%` made active (so that they can be discretionary points in the address). If we’re using L^AT_EX 2 _{ε} , we use the default-argument form of `\newcommand`; otherwise we write it out in all its horribleness.

```
890 \newcommand{\netaddress}[1][\relax]{%
891   \begingroup
892     \def\@network{}%
```

Unfortunately, because of the catcode hackery, we have still to do one stage of relaying within our own code, even if we're using L^AT_EX 2 _{ε} .

```
893 #1\@sanitize\makespace\ \makeactive@\@  
894 \makeactive\. \makeactive\% \@relay@netaddress}%
```

\@relay@netaddress finishes the job. It sets \thenetaddress for this author to contain the network name followed by the address. As a result of our kerfuffle above, @ and % are active at the point we're entered. We ensure they're active when \thenetaddress gets expanded, too. (**WOT?!**)

```
895 \def\@relay@netaddress#1{  
896   \ProtectNetChars  
897   \expandafter\protected@xdef  
898     \csname thenetaddress\endcsname\number\authornumber\endcsname  
899   {\protect\leavevmode\textrm{\@network}}%  
900   {\protect\NetAddrChars\net  
901     \ignorespaces#1\unskip}{}%  
902 \endgroup  
903 }
```

\personalURL is in essence the same as \netaddress, apart from (1) the lack of the eccentric optional argument, and (2) the activation of '/'.

For general URLs, url.sty (with or without hyperref) suffices and is recommended.

```
904 \def\personalURL{\begingroup  
905   \@sanitize\makespace\ \makeactive@\@  
906   \makeactive\. \makeactive\% \makeactive\/\@personalURL}%">  
907 \def\@personalURL#1{  
908   \ProtectNetChars  
909   \expandafter\protected@xdef  
910     \csname thePersonalURL\endcsname\number\authornumber\endcsname{  
911       \protect\leavevmode  
912       {\%  
913         \protect\URLchars\net  
914         \ignorespaces#1\unskip  
915       }%  
916     }%  
917   \endgroup  
918 }
```

Define the activation mechanism for '@', '%', '.' and '/', for use in the above. Note that, since the code has '%' active, we have '*' as a comment character, which has a tendency to make things look peculiar...

```
919 {  
920   \makecomment{*  
921   \makeactive@\@  
922   \gdef\netaddrat{\makeactive@\@*  
923     \def@{\discretionary{\char"40}{\char"40}}}  
924   \makeactive\%  
925   \gdef\netaddrpercent{\makeactive\%*}
```

```

926   \def{\discretionary{\char"25}{\char"25}}
927   \makeactive\.
928 \gdef\netaddrdot{\makeactive\.*}
929   \def.{\discretionary{\char"2E}{\char"2E}}

```

`\NetAddrChars` is what *we* use (we're constrained to retain the old interface to this stuff, but it *is* clunky...). Since URLs are a new idea, we are at liberty not to define a separate `\netaddrslash` command, and we only have `\URLchars`.

```

930 \gdef\NetAddrChars{\netaddrat \netaddrpercent \netaddrdot}
931 \makeactive\/
932 \gdef\URLchars{*
933   \NetAddrChars
934   \makeactive\/*
935   \def/{\discretionary{\char"2F}{\char"2F}}}

```

`\ProtectNetChars` includes protecting ‘/’, since this does no harm in the case of net addresses (where it's not going to be active) and we thereby gain by not having yet another csname.

```

936 \gdef\ProtectNetChars{*
937   \def@{\protect@}*
938   \def%{\protect%}*
939   \def.{\protect.}*
940   \def/{\protect/}*
941 }
942 }

```

`LATEX 2 ε` (in its wisdom) suppresses `\DeclareOldFontCommand` when in compatibility mode, so that in that circumstance we need to use a declaration copied from `latex209.def` rather than the way we would normally do the thing (using the command `LATEX 2 ε` defines for the job).

```

943 \if@compatibility
944   \DeclareRobustCommand{\net}{\normalfont\ttfamily\mathgroup\symtypewriter}
945 \else
946   \DeclareOldFontCommand{\net}{\ttfamily\upshape\mdseries}{\mathhtt}
947 \fi
948 \def\authorlist#1{\def\@author{#1}}
949 \def\@author{\@defaultauthorlist}

```

For the online re-publication (as of 2009) by Mathematical Sciences Publishers <http://mathscipub.org>, lots and lots of metadata is needed, much of it redundant with things we already do. They are flexible enough to allow us to specify it in any reasonable way, so let's make one command `\mspmetavar` which takes two arguments. Example: `\mspmetavar{volumenumber}{30}`. For our purposes, it is just a no-op. And this initiative never came to anything, so it is not used at all.

```

\mspmetavar
950 \def\mspmetavar#1#2{}

```

3.13 Article title

```
\if@articletitle \maketitle takes an optional “*”; if present, the operation is not defining the  
  \maketitle title of a paper, merely that of a “business” section (such as the participants at  
  \cr@maketitle a meeting) that has no credited author or other title. In this case, the command  
 flushes out the latest \sectitle (or whatever) but does nothing else.
```

Provide machinery to skip extra space, even one or more full columns, above the top of an article to leave space to paste up a previous article that has finished on the same page. This is a fall back to accommodate the fact that multiple articles cannot yet be run together easily with L^AT_EX 2 _{ε} .

```
951 \newif\if@articletitle  
952 \def\maketitle{\@ifstar  
953   {\@articletitlefalse\@r@maketitle} %  
954   {\@articletiteltrue\@r@maketitle} %  
955 }  
956 \def\@r@maketitle{\par

983   \egroup  
984 }
```

```

\shortTitle The \rh* commands are versions to be used in the running head of the article.
\ifshortAuthor Normally, they are the same things as the author and title of the article, but in the
\shortAuthor case that there are confusions therein, the text should provide substitutes, using
the \short* commands.

985 \def\shortTitle #1{\def\rhTitle{#1}}
986 \newif\ifshortAuthor
987 \def\shortAuthor #1{\def\rhAuthor{#1}\shortAuthortrue}

```

3.14 Section titles

The following macros are used to set the large *TUGboat* section heads (e.g. “General Delivery”, “Fonts”, etc.)

Define the distance between articles which are run together:

```
988 \def\secsep{\vskip 5\baselineskip}
```

Note that `\stbaselineskip` is used in the definition of `\sectitlefont`, in $\text{\LaTeX} 2_{\varepsilon}$, so that it has (at least) to be defined before `\sectitlefont` is used (we do the whole job).

```

989 \newdimen\stbaselineskip           \stbaselineskip=18\p@ 
990 \newdimen\stfontheight
991 \settoheight{\stfontheight}{\sectitlefont 0}

```

Declaring section titles; the conditional `\ifSecTitle` records the occurrence of a `\sectitle` command. If (when) a subsequent `\maketitle` occurs, the section title box will get flushed out; as a result of this, one could in principle have a set of `\sectitle` commands in a semi-fixed steering file, and inclusions of files inserted only as and when papers have appeared. Only the last `\sectitle` will actually be executed.

```

992 \newif\ifSecTitle
993 \SecTitlefalse
994 \newif\ifWideSecTitle
995 \newcommand{\sectitle}{%
996   \SecTitletrue
997   \@ifstar
998     {\WideSecTitletrue\def\s@ctitle}%
999     {\WideSecTitlefalse\def\s@ctitle}%
1000 }

```

`\PreTitleDrop` records the amount of column-space we need to eject before we start any given paper. It gets zeroed after that ejection has happened.

```
1001 \newdimen\PreTitleDrop \PreTitleDrop=\z@
```

The other parameters used in `\@sectitle`; I don’t think there’s the slightest requirement for them to be registers (since they’re constant values, AFAIK), but converting them to macros would remove the essentially useless functionality of being able to change them using assignment, which I’m not about to struggle with just now...

\AboveTitleSkip and \BelowTitleSkip are what you'd expect; \strulethickness is the value to use for \fboxrule when setting the title, and for the rule above titles when there is no box.

```

1002 \newskip\AboveTitleSkip \AboveTitleSkip=12\p@
1003 \newskip\BelowTitleSkip \BelowTitleSkip=8\p@
1004 \newdimen\strulethickness \strulethickness=.6\p@

    \@sectitle actually generates the section title (in a rather generous box).
    It gets called from \maketitle under conditional \ifSecTitle; by the time
    \@sectitle takes control, we already have \SecTitlefalse. This implemen-
    tation uses LATEX's \framebox command, on the grounds that one doesn't keep a
    dog and bark for oneself...

```

```

1005 \def\@sectitle #1{%
1006   \par
1007   \penalty-1000

```

If we're setting a wide title, the stuff will be at the top of a page (let alone a column) but inside a box, so that the separator won't be discardable: so don't create the separator in this case.

```

1008 \ifWideSecTitle\else\secsep\fi

1109     \end{center}
1110     \vspace{.5\baselineskip}}
```

3.15 Section headings

Redefine style of section headings to match plain *TUGboat*. Negative beforeskip suppresses following parindent. (So negate the stretch and shrink too).

These macros are called `*head` in the plain styles.

Relaying via `\TB@startsection` detects inappropriate use of `\section*`. Of course, if (when) we use it, we need to avoid that relaying; this can be done by `\letting \TB@startsection to \TB@safe@startsection`, within a group.

First the version for use in the default case, when class option NUMBERSEC is in effect.

```

1111 \if@numbersec
1112   \def\section{\TB@startsection{{section}}%
1113     1%
1114     \z@%
1115     {-8\p@ \o@plus-2\p@ \o@minus-2\p@}%
1116     {4\p@}%
1117     {\normalsize\bf\raggedright\hyphenpenalty=\oM}}}
1118   \def\subsection{\TB@startsection{{subsection}}%
1119     2%
1120     \z@%
1121     {-8\p@ \o@plus-2\p@ \o@minus-2\p@}%
1122     {4\p@}%
1123     {\normalsize\bf\raggedright\hyphenpenalty=\oM}}}
1124   \def\subsubsection{\TB@startsection{{subsubsection}}%
1125     3%
1126     \z@%
1127     {-8\p@ \o@plus-2\p@ \o@minus-2\p@}%
1128     {4\p@}%
1129     {\normalsize\bf\raggedright\hyphenpenalty=\oM}}}
1130   \def\paragraph{\TB@startsection{{paragraph}}%
1131     4%
1132     \z@%
1133     {4\p@ \o@plus1\p@ \o@minus1\p@}%
1134     {-1em}%
1135     {\normalsize\bf}}
```

Now the version if class option NONUMBER is in effect, i.e., if `\if@numbersec` is false.

```

1136 \else
1137   \setcounter{secnumdepth}{0}
1138   \def\section{\TB@nolimelabel
1139     \TB@startsection{{section}}%
1140       1%
1141       \z@%
1142       {-8\p@ \o@plus-2\p@ \o@minus-2\p@}%
1143       {4\p@}%
1144       {\normalsize\bf\raggedright\hyphenpenalty=\oM}}}
1145   \def\subsection{\TB@nolimelabel
1146     \TB@startsection{{subsection}}%
1147       2%
1148       \z@%
1149       {-8\p@ \o@plus-2\p@ \o@minus-2\p@}%
1150       {-0.5em\o@plus-\fontdimen3\font}%
1151       {\normalsize\bf\raggedright\hyphenpenalty=\oM}}}
1152   \def\subsubsection{\TB@nolimelabel
1153     \TB@startsection{{subsubsection}}%
1154       3%
```

```

1155                               \parindent
1156                               {-8\p@ \oplus-2\p@ \minus-2\p@}%
1157                               {-0.5em\oplus-\fontdimen3\font}%
1158 {\normalsize\bf\raggedright\hyphenpenalty=\@M}}}
1159 \fi

```

`\TB@startsection` used to trap * versions of sectioning commands when numbering wasn't in effect. But that eventually seemed a useless complaint, since being able to switch back and forth between numbered and unnumbered can be useful during article development. So now `\TB@startsection` is just a synonym for `\@startsection`.

```
1160 \def\TB@startsection#1{\@startsection#1}%
```

`\TB@safe@startsection` is to be used where `\section*` (etc.) appear in places where the request is OK (because it's built in to some macro we don't fiddle with).

```
1161 \def\TB@safe@startsection#1{\@startsection#1}
```

The `SafeSection` environment allows use of *-forms of sectioning environments. It's not documented for the general public: it's intended as an editor's facility.

```

1162 \newenvironment{SafeSection}%
1163   {\let\TB@startsection\TB@safe@startsection}%
1164   {}

```

And now for the exciting sectioning commands that L^AT_EX defines but we don't have a definition for (whatever else, we don't want Lamport's originals, which come out 'like the blare of a bugle in a lullaby'²).

The three inappropriate ones are subparagraph (indistinguishable from paragraph), and chapter and part. The last seemed almost to be defined in an early version of these macros, since there was a definition of `\l@part`. I've not got down to where that came from (or why). If class option NONUMBER is in effect, we also suppress `\paragraph`, since it has no parallel in the plain style.

```

1165 \if@numbersec
1166   \def\subparagraph{\TB@nosection\subparagraph\paragraph}
1167 \else
1168   \def\paragraph{\TB@nosection\paragraph\subsubsection}
1169   \def\subparagraph{\TB@nosection\subparagraph\subsubsection}
1170 \fi
1171 \def\chapter{\TB@nosection\chapter\section}
1172 \def\part{\TB@nosection\part\section}
1173 \def\TB@nosection#1#2{\TB@warning{class does not support \string#1,
1174   \string#2\space used instead}#2}

```

`\l@<sectioning-name>` is for table of contents (of an article). We define new macros to allow easily changing the font used for toc entries (for *TUGboat*, we usually want roman, not bold), and the space between entries. Nelson Beebe

²Thurber, *The Wonderful O*

and Frank Mittelbach's articles often have toc's (and few others). Also turn off microtype protrusion after

Contents

or leaders get messed up.

```

1175 \def\TBtocsectionfont{\normalfont}
1176 \newskip\TBtocsectionspace \TBtocsectionspace=1.0em\@plus\p@%
1177 \def\l@section#1#2{\addpenalty{\@secpenalty}%
1178   \addvspace{\TBtocsectionspace}%
1179   \tempdima 1.5em
1180   \begingroup

```

3.16 Appendices

Appendices (which are really just another sort of section heading) raise a problem: if the sections are unnumbered, we plainly need to restore the section numbering, which in turn allows labelling of section numbers again (\TBnolimelabel happens before the \refstepcounter, so its effects get lost ... what a clever piece of design that was). So here we go:

```

1187 \renewcommand{\appendix}{\par
1188   \renewcommand{\thesection}{\@Alph\c@section}%
1189   \setcounter{section}{0}%
1190   \if@numbersec
1191   \else
1192     \setcounter{secnumdepth}{1}%
1193   \fi}
```

Now: is this the start of an appendix environment? This can be detected by looking at \currenvir; if we are, we need to relay to \appendix@env to pick up the optional argument.

```

1194 \def\@tempa{appendix}
1195 \ifx\@tempa\currenvir
1196   \expandafter\appendix@env
1197 \fi
1198 }
```

Here we deal with \begin{appendix}[*app-name*]

```

1199 \newcommand{\app@prefix@section}{}%
1200 \newcommand{\@appendix@env}[1][Appendix]{%
1201   \renewcommand{\@seccntformat}[1]{\csname app@prefix@##1\endcsname}
```

```

1202     \csname the##1\endcsname\quad}%
1203     \renewcommand{\app@prefix@section}{#1 }%
1204 }

Ending an appendix environment is pretty trivial...
1205 \let\endappendix\relax

```

3.17 References

If the sections aren't numbered, the natural tendency of the author to cross-reference (which, after all, is one of the things L^AT_EX is for ever being advertised as being good at) can cause headaches for the editor. (Yes it can; believe me ... there's always one.)

The following command is used by each of the sectioning commands to make a following `\ref` command bloop at the author. Even if the author then ignores the complaint, the poor old editor may find the offending `\label` rather more easily.

(Note that macro name is to be read as “*noli me label*” (I don't know the mediaeval Latin for ‘label’).

Comment To come (perhaps): detection of the act of labelling, and an analogue of `\ifG@refundefined` for this sort of label

```

1206 \def\TB@nolimelabel{%
1207   \def\@currentlabel{%
1208     \protect\TBWarning{%
1209       Invalid reference to numbered label on page \thepage
1210       \MessageBreak made%
1211     }%
1212     \textbf{?}!?
1213   }%
1214 }

```

3.18 Title references

This is a first cut at a mechanism for referencing by the title of a section; it employs the delightfully simple idea Sebastian Rahtz has in the `nameref` package (which is part of `hyperref`). As it stands, it lacks some of the bells and whistles of the original, but they could be added; this is merely proof-of-concept.

The name label comes from the moveable bit of the section argument; we subvert the `\@sect` and `\@ssect` commands (the latter deals with starred section commands) to grab the relevant argument.

```

1215 \let\TB@@sect\@sect
1216 \let\TB@@ssect\@ssect
1217 \def\@sect#1#2#3#4#5#6[#7]#8{%
1218   \def\@currentlabelname{#7}%
1219   \TB@@sect{#1}{#2}{#3}{#4}{#5}{#6}[{#7}]{#8}%
1220 }

```

```

1221 \def\@ssect#1#2#3#4#5{%
1222   \def\@currentlabelname{#5}%
1223   \TB@@ssect{#1}{#2}{#3}{#4}{#5}%
1224 }

```

We output the name label as a second `\newlabel` command in the `.aux` file. That way, packages such as `varioref` which also read the `.aux` information can still work. So we redefine `\label` to first call the standard L^AT_EX `\label` and then write our named label as `nr<label>`.

```

1225 \let\@savelatexlabel=\label % so save original LaTeX command
1226 %
1227 \def\label#1{%
1228   \@savelatexlabel{#1}%
1229   \@bsphack
1230   \if@filesw
1231     \protected@write\@auxout{}{%
1232       {\string\newlabel{nr@#1}{{\@currentlabel}{\@currentlabelname}}}}%
1233   \fi
1234   \@esphack
1235 }

```

Of course, in the case of a sufficiently mad author, there will be no sectioning commands, so we need to

```
1236 \let\@currentlabelname\empty
```

Getting named references is then just like getting page references in the L^AT_EX kernel (see `ltxref.dtx`).

```

1237 \DeclareRobustCommand{\nameref}[1]{\expandafter\@setref
1238   \csname r@nr@#1\endcsname\@secondoftwo{#1}}

```

3.19 Float captions

By analogy with what we've just done to section titles and the like, we now do our best to discourage hyphenation within captions. We also typeset them in `\small` (actually `\tubcaptionfonts`).

First, let's define a dimension by which we will indent full-page captions. We'll also use this to indent abstracts in proceedings style.

```

\@tubfullpageindent
1239 \newdimen\@tubfullpageindent
1240 \@tubfullpageindent = \if@tubtwocolumn 4.875pc \else 3.875pc \fi
1241 \let\tubcaptionleftglue=\hfil

```

One-line captions are normally centered, but sometimes we want to set them flush-left for consistency with other nearby figures.

```

\tubcaptionleftglue
1242 \let\tubcaptionleftglue=\hfil

```

Ok, here is `\@makecaption`.

```
1243 \def\tubcaptionfonts{\small}%
1244 \long\def\@makecaption#1#2{%
1245   \vskip\abovecaptionskip
1246   \sbox\@tempboxa{\tubcaptionfonts \tubmakecaptionbox{#1}{#2}}% try in an hbox
1247   \ifdim \wd\@tempboxa > \hsize
1248     {% caption doesn't fit on one line; set as a paragraph.
1249      \tubcaptionfonts \raggedright \hyphenpenalty=\@M \parindent=1em
1250      % indent full-width captions {figure*}, but not single-column {figure}.
1251      \ifdim\hsize = \textwidth
1252        \leftskip=\@tubfullpageindent \rightskip=\leftskip
1253        \advance\rightskip by 0pt plus2em % increase acceptable raggedness
1254      \fi
1255      \noindent \tubmakecaptionbox{#1}{#2}\par}%
1256   \else
1257     % fits on one line; use the hbox, centered. Do not reset its glue.
1258     \global\@minipagetrue
1259     \hb@xt@\hsize{\tubcaptionleftglue\box\@tempboxa\hfil}%
1260   \fi
1261   \vskip\belowcaptionskip}
1262 %
1263 \def\tubmakecaptionbox#1#2{#1: #2}% allow overriding for a paper
```

Also use `\tubcaptionfonts` for the caption labels, and put the label itself (e.g., “Figure 1”) in bold.

```
1264 \def\fnum@figure{{\tubcaptionfonts \bf \figurename\nobreakspace\thefigure}}
1265 \def\fnum@table{{\tubcaptionfonts \bf \tablename\nobreakspace\thetable}}
```

Let’s reduce the default space above captions a bit, and give it some flexibility.
The default is 10pt, which seems too much.

```
1266 \setlength\abovecaptionskip{6pt plus1pt minus1pt}
```

3.20 Size changing commands

Apart from their ‘normal’ effects, these commands change the glue around displays.

```
1267 \renewcommand{\normalsize}{%
1268   \@setfontsize\normalsize\@xipt\@xiipt
1269   \abovedisplayskip=3\p@+\p@-\p@
1270   \belowdisplayskip=\abovedisplayskip
1271   \abovedisplayshortskip=\z@+\p@-\p@
1272   \belowdisplayshortskip=\p@+\p@-\p@
1273 }
1274
1275 \renewcommand{\small}{%
1276   \@setfontsize\small\@ixpt{11}%
1277   \abovedisplayskip=2.5\p@+\p@-\p@
1278   \belowdisplayskip=\abovedisplayskip
1279   \abovedisplayshortskip=\z@+\p@-\p@}
```

```

1280     \belowdisplayshortskip=\p@+\p@plus 2\p@-\p@minus\p@
1281 }
1282
1283 \renewcommand{\footnotesize}{%
1284     \setfontsize{footnotesize}@viiipt{9.5}%
1285     \abovedisplayskip=3\p@+\p@plus 3\p@-\p@minus\p@
1286     \belowdisplayskip=\abovedisplayskip
1287     \abovedisplayshortskip=\z@\p@plus 3\p@
1288     \belowdisplayshortskip=\p@+\p@plus 3\p@-\p@minus\p@
1289 }

```

3.21 Lists and other text inclusions

```

1339 %

```

3.22 Some fun with verbatim

The plain *TUGboat* style allows [optional] arguments to its `\verb+atim` command. This will allow the author (or editor) to specify a range of exciting features; we would definitely like the numbered verbatim style for code (that facility is reserved for a future version of this package), and the present little bit of code imposes the `\ruled` option on the built-in `\verb+atim` environment. (Note that we don't yet deal with `\verb+atim*`, which is in itself an option to the `plain` original.)

We start by saving various bits and bobs whose operation we're going to subvert.

```

1340 \%let\@TB@\verb+atim@\verb+atim
1341 \let\@TBverb+atim\verb+atim
1342 \let\@TBendverb+atim\endverb+atim

```

Impose an optional argument on the environment.

We start the macro with `\par` to avoid a common error: if the optional argument is `\small`, and the document has no blank line before the verbatim block, we don't want that preceding paragraph to be set with `\small`'s line spacing.

(`\obeylines` added to prevent the `\futurelet` from propagating into the body of the verbatim, thus causing lines that start with odd characters (like # or even \) to behave peculiarly.)

```

1343 \def\verb+atim{\par\obeylines
1344   \futurelet\reserved@a\@switch@sqbverb+atim}
1345 %
1346 \def\@switch@sqbverb+atim{\ifx\reserved@a[%]
1347   \expandafter\@sqbverb+atim\else
1348   \def\reserved@b{\@sqbverb+atim[]}\expandafter\reserved@b\fi}
1349 %
1350 \def\@sqbverb+atim[#1]{%

```

The optional argument consists entirely of functions that modify the appearance of the environment. Following the `plain` style, we define the functions we can execute in the optional argument here.

The command `\ruled` tells us that there should be rules above and below the verbatim block.

```
1351 \def\ruled{\let\if@ruled\iftrue}%
```

Then we just execute the ones we've got, and relay to a (hacked) copy of the built-in environment.

```
1352 #1\@TBverbatim}
```

The built-in environment itself relays to `\@verbatim`, which we've subverted to impose our views on appearance.

```
1353 \def\@verbatim{%
```

First, we deal with `\ruled`:

```
1354 \if@ruled\trivlist\item\hrule\kern5\p@\nobreak\fi
```

Now, the code out of the original `verbatim` environment:

```
1355 \trivlist \item\relax
1356 \if@minipage\else\vskip\parskip\fi
1357 \leftskip\@totalleftmargin\rightskip\z@skip
1358 \parindent\z@\parfillskip\@flushglue\parskip\z@skip
1359 \@@par
1360 \tempswafalse
1361 \def\par{%
1362   \if@tempswa
1363     \leavevmode \null \@@par\penalty\interlinepenalty
1364   \else
1365     \tempswatrue
1366     \ifhmode\@@par\penalty\interlinepenalty\fi
1367   \fi}%
1368 \obeylines \verbatim@font \noligs
1369 \let\do\@makeother \dospecials
1370 \everypar \expandafter{\the\everypar \unpenalty}%
1371 }%
```

To end the environment, we do everything in reverse order: relay via the copy we made of `\endverbatim`, and then finish off the option changes (again `\ruled` only, so far).

```
1372 \def\endverbatim{\@TBendverbatim
1373 \if@ruled\kern5\p@\hrule\endtrivlist\fi}
```

Define the `\if` used by the `\ruled` option:

```
1374 \let\if@ruled\iffalse
```

Finally, if `microtype` is loaded, we want it to be deactivated in verbatim blocks. It often manipulates a leading `\` rather too much.

```
1375 \AtBeginDocument{%
```

```

1376     \@ifpackageloaded{microtype}%
1377         {\g@addto@macro\@verbatim{\microtypesetup{activate=false}}}{}
1378 }

```

3.23 Bibliography

This is more or less copied verbatim from Glenn Paulley's *chicago.sty* (`gnpaulle@bluebox.uwaterloo.ca`). It produces an author-year citation style bibliography, using output from the BIBTEX style file based on that by Patrick Daly. It needs extra macros beyond those in standard LATEX to function properly. The form of the bibitem entries is:

```
\bibitem[\protect\citeauthoryear{Jones, Baker, and Smith}%
       {Jones et al.}{1990}{key}...]
```

The available citation commands are:

\cite{key}	→ (Jones, Baker, and Smith 1990)
\citeA{key}	→ (Jones, Baker, and Smith)
\citeNP{key}	→ Jones, Baker, and Smith 1990
\citeANP{key}	→ Jones, Baker, and Smith
\citeN{key}	→ Jones, Baker, and Smith (1990)
\shortcite	→ (Jones et al. 1990)
\citeyear	→ (1990)
\citeyearNP	→ 1990

First of all (after checking that we're to use Harvard citation at all), make a copy of LATEX's default citation mechanism.

```

1379 \if@Harvardcite
1380 \let\@internalcite\cite

```

Normal forms.

\thebibliography If the user's asked to use L^AT_EX's default citation mechanism (using the `rawcite` option), we still need to patch `\sloppy` to support justification of the body of the bibliography. We kludge in a call to `\frenchspacing` too, since there is no reason to change only period's `\sfcode`, as L^AT_EX's original `thebibliography` (in `classes.dtx`) does.

By the way, `amsgen.sty` changes `\frenchspacing` to set the `\sfcode` of punctuation character to successively decreasing integers ending at 1001 for comma. Thus its 1006 for period is overwritten to 1000 for `thebibliography`, making `amsgen`'s `\@addpunct` ineffective. Don't know what that means in practice, if anything.

Back here, we also play with *The T_EXbook*@startsection since we always have, though that is no longer needed.

```

1573 \fi}

```

3.27 Font-related definitions and machinery

These are mostly for compatibility with plain `tugboat.sty`

```

1574 \newif\ifFirstPar \FirstParfalse
1575 \def\smc{\sc}
1576 \def\ninepoint{\small}
1577 </classestail>

```

`\SMC` isn't small caps — Barbara Beeton says she thinks of it as “big small caps”. She says (modulo capitalisation of things...):

For the things it's used for, regular small caps are not appropriate — they're too small. Real small caps are appropriate for author names

(and are so used in continental bibliographies), section headings, running heads, and, on occasion, words to which some emphasis is to be given. `\SMC` was designed to be used for acronyms and all-caps abbreviations, which look terrible in small caps, but nearly as bad in all caps in the regular text size. The principle of using “one size smaller” than the text size is similar to the design of caps in German — where they are smaller relative to lowercase than are caps in fonts intended for English, to improve the appearance of regular text in which caps are used at the heads of all nouns, not just at the beginnings of sentences.

We define this in terms of the memory of the size currently selected that’s maintained in `\@currsize`: if the user does something silly re. selecting fonts, we’ll get the wrong results. The following code is adapted from an old version of `relsize.sty` by Donald Arseneau and Matt Swift. (The order of examination of `\@currsize` is to get the commonest cases out of the way first.)

```

1578 <*common>
1579 \DeclareRobustCommand{\SMC}{%
1580   \ifx\@currsize\normalsize\small\else
1581   \ifx\@currsize\small\footnotesize\else
1582   \ifx\@currsize\footnotesize\scriptsize\else
1583   \ifx\@currsize\large\normalsize\else
1584   \ifx\@currsize\Large\large\else
1585   \ifx\@currsize\LARGE\Large\else
1586   \ifx\@currsize\scriptsize\tiny\else
1587   \ifx\@currsize\tiny\tiny\else
1588   \ifx\@currsize\huge\LARGE\else
1589   \ifx\@currsize\Huge\huge\else
1590   \small\SMC@unknown@warning
1591 \fi\fi\fi\fi\fi\fi\fi\fi
1592 }
1593 \newcommand{\SMC@unknown@warning}{\TBWarning{\string\SMC: nonstandard
1594   text font size command -- using \string\small}}
1595 \newcommand{\textSMC}[1]{\SMC #1}

```

The `\acro` command uses `\SMC` as it was originally intended. Since these things are uppercase-only, it fiddles with the spacefactor after inserting its text.

```

1596 \newcommand{\acro}[1]{\textSMC{#1}\@}
1597 </common>

```

3.28 Miscellaneous definitions

`\EdNote` allows the editor to enter notes in the text of a paper. If the command is given something that appears like an optional argument, the entire text of the note is placed in square brackets. (Yes, it really is!)

3.29 Initialization

If we're going to use Harvard-style bibliographies, we set up the bibliography style: the user doesn't get any choice.

```

1653 \if@Harvardcite
1654   \AtBeginDocument{%
1655     \bibliographystyle{ltugbib}%
1656   }
1657 \fi
1658 \authornumber{z}
1659 \let\@signature\@defaultsignature
1660 \InputIfFileExists{ltugboat.cfg}{\TBInfo{Loading ltugboat
1661                                     configuration information}}{%
1662   \classe{ltugboat}}
```

4 L^AT_EX 2 _{ε} Proceedings class

`\@tugclass` Make the code of `ltugboat.cls` (when we load it) say it's really us:

```

1663 \newif\if@tugproccls
1664 \def\@tugclass{ltugproc}
```

`\if@proc@sober` TUG'96 proceedings switched to more sober headings still; so the `tug95` option
`\if@proc@numerable` establishes the original state. In the absence of any other guidance, we use the '96
for TUG'97 proceedings, but also allow numbering of sections.

```

1665 \newif\if@proc@sober
1666 \newif\if@proc@numerable
1667 \DeclareOption{tug95}{%
1668   \if@proc@soberfalse
1669   \if@proc@numerablefalse
1670 }
1671 \DeclareOption{tug96}{%
1672   \if@proc@sobertrue
1673   \if@proc@numerablefalse
1674 }
1675 \DeclareOption{tug97}{%
1676   \if@proc@sobertrue
1677   \if@proc@numerabletrue
```

```

1678 }
1679 \DeclareOption{tug2002}{%
1680   \c@proc@sobertrue
1681   \c@proc@numerabletrue
1682   \let\if@cproc@numbersec\iftrue
1683   \PassOptionsToClass{numbersec}{ltugboat}%
1684 }

```

\if@cproc@numbersec If we're in a class that allows section numbering (the actual check occurs after `\ProcessOptions`, we can have the following:

```

1685 \DeclareOption{numbersec}{\let\if@cproc@numbersec\iftrue
1686   \PassOptionsToClass{numbersec}{ltugboat}%
1687 }
1688 \DeclareOption{nonumber}{\let\if@cproc@numbersec\iffalse
1689   \PassOptionsToClass{nonumber}{ltugboat}%
1690 }

```

\ifTB@title If we have a paper for which we want to create a detached title, with an editor's note, and then set the paper separately, we use option `notitle`.

```

1691 \newif\ifTB@title
1692 \DeclareOption{title}{\TB@titletrue}
1693 \DeclareOption{notitle}{\TB@titlefalse
1694   \AtBeginDocument{\stepcounter{page}}}

```

There are these people who seem to think `tugproc` is an option as well as a class...

```

1695 \DeclareOption{tugproc}{%
1696   \ClassWarning{\@tugclass}{Option \CurrentOption\space ignored}%
1697 }

```

All other options are simply passed to `ltugboat`...

```
1698 \DeclareOption*{\PassOptionsToClass{\CurrentOption}{ltugboat}}
```

If there's a `tugproc` defaults file, input it now: it may tell us which year we're to perform for... (Note: this code *is* millennium-proof. It's not terribly classy for years beyond 2069, but then I'm not going to be around then—this will be an interesting task for a future `TEXie`...)

```

1699 \InputIfFileExists{@tugclass.cfg}{\ClassInfo{ltugproc}%
1700   {Loading ltugproc configuration information}{}}
1701 \@ifundefined{TUGprocExtraOptions}%
1702   {\let\TUGprocExtraOptions\empty}%
1703   {\edef\TUGprocExtraOptions{\TUGprocExtraOptions}}

```

\tugProcYear Now work out what year it is

```

1704 \tempcnta\year
1705 \ifnum\tempcnta<2000
1706   \divide\tempcnta by100
1707   \multiply\tempcnta by100
1708   \advance\tempcnta-\year

```

```
1709  \tempcnta-\tempcnta  
1710 \fi
```

And use that for calculating a year for us to use.

```
1711 \edef\tempa{\noexpand\providecommand\noexpand\tugProcYear  
1712           {\ifnum10>\tempcnta0\fi\the\tempcnta}}  
1713 \tempa  
1714 \ClassInfo{ltugproc}{Class believes year is  
1715   \expandafter\ifnum\tugProcYear<2000 19\fi\tugProcYear  
1716   \gobble}
```

Check that this is a “sensible year” (one for which we have a class option defined). If not, make it a ‘suitable’ year, in particular, one that allows numbering sections.

```
1717 \expandafter\ifx\csname ds@tug\tugProcYear\endcsname\relax  
1718   \def\tugProcYear{2002}\fi
```

Now execute the default ‘year’ option and get on with processing. Note that this command gets ignored if the configuration file specifies a silly year.

```
1719 \ExecuteOptions{tug\tugProcYear,title\TUGprocExtraOptions}  
1720 \ProcessOptions  
1721 \if@proc@numbersec  
1722   \if@proc@enumerable  
1723   \else  
1724     \ClassWarning{\tugclass}{This year's proceedings may not have  
1725       numbered sections}!  
1726   \fi  
1727 \fi
```

Call `ltugboat`, adding whichever section numbering option is appropriate

```
1728 \LoadClass[\if@proc@numbersec numbersec\else nonumber\fi]{ltugboat}
```

4.1 Proceedings titles

`\maketitle` There’s no provision for ‘section titles’ in proceedings issues, as there are in *TUG-boat* proper. Note the tedious L^AT_EX bug-avoidance in the `\@TB@test@document` macro.

```
1729 \def\maketitle{  
1730   \begingroup
```

first, a bit of flim-flam to generate an initial value for `\rhAuthor` (unless the user’s already given one with a `\shortAuthor` command).

```

1824   \@abstract@findend}

```

Here we've got to \end in the body of the abstract. \@abstract@findend takes the ‘argument’ of the \end do its argument.

```

1825 \def\@abstract@findend#1{%
1826   \def\@tempa{#1}%

```

If we've found an ‘end’ to match the ‘begin’ that we started with, we're done with gathering the abstract up; otherwise we stuff the end itself into the token register and carry on.

```

1827 \ifx\@tempa\@abstract@
1828   \expandafter\@abstract@end
1829 \else

```

It's not \end{abstract}—check that it's not \end{document} either (which signifies that the author's forgotten about ending the abstract)

```

1830   \def\@tempb{document}%
1831   \ifx\@tempa\@tempb
1832     \TError{\string\begin{\@abstract@}%
1833       ended by \string\end{\@tempb}}%
1834     {You've forgotten \string\end{\@abstract@}}

4.2 Section divisions

Neither sections nor subsections are numbered by default in the proceedings style: note that this puts a degree of stress on authors' natural tendency to reference

sections, which is a matter that needs attention. The class option NUMBERSEC once again numbers the sections (and noticeably changes the layout).

```
1884 \if@proc@numbersec
1885 \else
1886   \setcounter{secnumdepth}{0}
1887 \fi
```

Otherwise, the `\section` command is pretty straightforward. However, the `\subsection` and `\subsubsection` are run-in, and we have to remember to have negative stretch (and shrink if we should in future choose to have one) on the `\afterskip` parameter of `\@startsection`, since the whole skip is going to end up getting negated. We use `\TB@startsection` to detect inappropriate forms.

```
