

The `xcookybooky` package*

Sven Harder

`sven_one1@gmx.de`

<https://code.google.com/p/xcookybooky/>

February 3, 2015

Abstract

This package is made for typesetting recipes. You simply enter ingredients, preparation steps and get a beautiful recipe page. It is also possible to enter two pictures, which are displayed above the name of the recipe. Another option is to write a introduction, several suggestions and a hint, which is displayed at the bottom of the page.

Change History

v1.0	
General: Initial version	1
v1.1	
General: Load the non-free package 'emerald' per option. Possibility to change the picture width independently from the text columns	1
v1.2	
General: Better way for displaying the ingredients (tabularx). Thanks to Bartosz Dzibaczyk for developing.	1
v1.3	
General: Fixed a problem with the default recipe name font. Thanks to Václav Ze-	
v1.4	
General: Added two commands for a introduction and recipe suggestions. Additional several hooks are implemented in order to insert user-defined text blocks at different places in the recipe. Thanks to Heikki Lehvaslaiho for designing the graphical separator and sending suggestions. Added translations for German, English, French and Spanish.	1

*This document corresponds to `xcookybooky` v1.4, dated 2015/02/03.

1 Introduction

It all begin in 2011 when I wanted to make a cookbook with L^AT_EX. Thus I was looking for recipe templates and found the `cookybooky` package by Jürgen Gilg (<http://www.ctan.org/pkg/cookybooky>). It looks very good, but I was unable to compile it (e.g. I haven't got the Lucida fonts). Also there are some packages which have to be downloaded by hand, because there are not available at CTAN. Other handicaps are the missing possibility to create a PDF-file directly and a recipe cannot be longer than a single page. So decided to take a look at the code. Step by step I replaced all critical parts. Finally the code is nearly complete different from the original and now it is possible to create beautiful designed recipes much easier (at least in my opinion).

Please note that there is no compatibility between `xcookybooky` and `cookybooky`, even the name is associating it. I chose the name, because I was inspired by the layout.

2 Usage

In this section the most important macros are explained. After this you should be able to insert recipes. For more details take a look at the implementation in section 6. Afterwards some macros are shown, which allows you to modify the design (e.g. colors, headlines).

2.1 Main

This commands are commonly used for typesetting recipes. For more details take a look at the implementation in section 6. You can also investigate the examples and the configuration file.

- `recipe` The `recipe` environment is used to insert recipes. Each recipe is included in a single enviroment. It is necessary to enter the name of the recipe. Besides it is possible to insert also the recipetime, the portions, the calory content and the source (where you get this recipe).

```
\begin{recipe}
[%]
  preparationtime = {\unit[1]{h}},
  bakingtime={\unit[1]{h}},
  bakingtemperature={\protect\bakingtemperature{fanoven=\unit[230]{°C}}},
  portion = {\portion{5-6}},
  calory={\unit[3]{kJ}},
  source = {Somebody you used know}
]
{Test Recipe}
...
\end{recipe}
```

Example 1: Recipe Environment

- `\graph` It is possible to set two pictures by using the macro `graph`. They are displayed at the top of the page and therefore above all other content. If no pictures are set, the space is used by the other content. The `big` picture should be larger than the `small` picture of course. The width of both graphics can be adapt to your needs by applying the command `setRecipeLengths`.

```
\graph{
    small = strawberry ,
    big = strawberrycake
}
```

Example 2: Graph Command (simple)

Another possibility is shown in the following example. It is recommended if you only want to change the widths of the pictures for one recipe, because these values are one only used for one recipe. If you want to changed it for all recipes use `setRecipeLengths`.

```
\graph{
    small = strawberry ,
    smallpicturewidth = 0.3\textwidth ,
    big = strawberrycake ,
    bigpicturewidth = 0.6\textwidth ,
}
```

Example 3: Graph Command (extended)

`\ingredients` Here the ingredients of your recipe are set. They should be entered by number (unit) & ingredient. If the unit is a SI-Unit, it looks better if you use the `units` package instead of a blank. Since the version 1.2 there is only one possibility to enter ingredients, which is shown in the example. Note that a overlong ingredient will automatically create a line break.

```
\ingredients{
    2 bar & Dark Chocolate (above \unit[70]{\%}) \\
    3 & Eggs \\
    \unit[200]{ml} & Cream \\
    \unit[40]{g} & Sugar \\
    \unit[50]{g} & Butter
}
```

Example 4: Ingredients Command

In the versions up to 1.1 there was also a method to enter ingredients with three columns. Due to the substitution of `tabular` with `tabulary` I decided that the three columns method is no longer supported, because it would mean a lot of work. This method has also the drawback it needs more space and in my opinion it also looks ugly. If you are using the three columns solution there are two options:

1. Use the version 1.1 of this package, which can be found at <https://code.google.com/p/xcookybooky/>
2. Redefine the concerning command in your latex file or in the configuration file

`\preparation` The preparation steps are inserted by this macro. Every step is written after `step` command. This is necessary for the numeration. Since version 1.4 it is allowed to use blank lines to create passages.

```
\preparation{
    \step This is the first step for cooking a brilliant meal.
    \step The second step follows...
    \step and so on
    \step Enjoy your meal!
}
```

Example 5: Preparation Command

If you don't like the step number, you can either redefine it or simply use an enumeration as demonstrated in the next example.

```
\preparation{
    \begin{enumerate}
        \item This is the first step for cooking a brilliant meal.
        \item The second step follows...
        \item and so on
        \item Enjoy your meal!
    \end{enumerate}
}
```

Example 6: Preparation Command with Enumeration

2.2 Advanced

`\introduction` The `introduction` macro can be used for inserting an introduction before the preparation and ingredients part. It has a frame and the text can contain blank lines to create passages.

```
\introduction{%
    This text block can contain an introduction to the recipe.
}
```

Example 7: Introduction Command

`\suggestion` This command is displayed after the ingredients and preparation part of the recipe. It is expandable so that you can insert multiple suggestions. The optional parameter can be used to set a headline.

```
\suggestion{%
    Another possibility to insert additional information to the recipe.
}
% \suggestion[Headline]{%
    Another possibility to insert additional information to the recipe.
}
```

Example 8: Suggestion Command

2.3 Support Commands

`\portion` This macro is intened as an interface for an equal formating of portions entries. For this it can be easily modified. You just have to renew this command.

```
\portion{5}
\portion[People]{5}
```

Example 9: Portion Command

`\bakingtemperature` This macro allows you to enter some bakingtemperatures. If you do not like the order of the temperatures you can change them by redefining the command. The temperatures are inserted as key/value pairs as known from the `xkeyval` package.

```
\begin{recipe}
[
    bakingtemperature=\protect\bakingtemperature{
```

```

fanoven=\unit[230]{°C},
topbottomheat=\unit[195]{°C},
topheat=\unit[195]{°C},
bottomheat , gasstove=Level 2}
}
]{ Test Recipe}
\end{recipe}

```

Example 10: Baking Temperature Command

2.4 Modify Design

The following macros can be used outside the recipe environment to choose your personal color etc.

`\setRecipeColors` If you want to change the default colors, you can use `setRecipeColors`. The colors are set by `<key = value>` as known by the `xkeyval` package. The names of colors can be found in table 1. New

Key	Default Value	Description
recipename	DarkGreen	recipe name
intro	black	introduction
ing	DarkGray	ingredients (text)
inghead	DarkGray	headline of the ingredients
prep	black	preparation (text)
prephead	black	headline of the preparation
suggestion	black	suggestions (text)
suggestionhead	black	headline of suggestions
separationgraph	black	graphical separator
hint	red	hint (text)
hinthead	red	headline of the hint
hintline	red	lines leftside the hint text (cross)
numeration	red	numeration of the preparation steps

Table 1: Color Management

colors can be easily defined by the `xcolor` package as shown the example below.

```

\definecolor{webgreen}{rgb}{0,.5,0}

\setRecipeColors{
    recipename = webgreen ,
    ing = blue ,
    numeration = black ,
}

```

Example 11: Setting Recipe Colors Command

`\setRecipeLengths` By using the command `setRecipeLengths` it is possible to change the (default) values for the picture widths and the text column widths. In the table 2 all implemented keys are listed.

```

\setRecipeLengths{
    preparationwidth = 0.5\textwidth ,
    ingredientswidth = 0.4\textwidth ,
}

```

Example 12: Setting Recipe Lengths Command

Key	Description
pictureheight	height of both pictures
bigpicturewidth	width of the bigger picture
smallpicturewidth	width of the smaller picture
introductionwidth	width of introduction
preparationwidth	width of preparation
ingredientswidth	width of ingredients

Table 2: Recipe Lengths

\setRecipeSizes The macro `setRecipeSizes` enables you to modify the font size of many parts of the recipe. The sizes are inserted by `<key = value>` (`xkeyval`). All supported keys can be found in the following table 3.

Key	Description
recipename	font size of recipe name
intro	font size of introduction (text)
ing	font size of ingredients (text)
inghead	font size of headline of ingredients
prephead	font size of headline of preparation
suggestion	font size of suggestion (text)
hint	font size of hint (text)
hinthead	font size of headline of hint

Table 3: Font Size Management

```
\setRecipeSizes{
    recipename = \fontsize{25pt}{30pt},
    ing = \normalsize,
    hinthead = \Large
}
```

Example 13: Setting Recipe Sizes Command

\setRecipenameFont The name of recipe is only displayed with a handwritten font, if the corresponding option is selected. See section 2.6 for details. In my opinion it looks much better than a standard font. But if you want to change it you can use this macro. A well-arranged list of fonts can be found at <http://www.tug.dk/FontCatalogue/>. The four parameters are font name, font encoding, font series and font shape. The size is changed by `setRecipeSizes`. The following example shows a bunch of interesting fonts, which you should try out.

```
\setRecipenameFont{cmr}{T1}{m}{n} % probably the default setting
\usepackage{pbsi}
\setRecipenameFont{pbsi}{T1}{xl}{n}
```

Example 14: Setting Recipename Font Command (package `pbsi`)

```
\usepackage{emerald}
\setRecipenameFont{fau}{T1}{m}{n}
\setRecipenameFont{fwb}{T1}{m}{n}
\setRecipenameFont{fjd}{T1}{m}{n} % default by option handwritten
```

Example 15: Setting Recipename Font Command (package `emerald`)

2.5 Translation

\setHeadlines The command `setHeadlines` allows to modify the (translated) headlines. This is also needed for translations, if the used language is not supported yet. If you have improvements for a translation or created a new one, feel free to send me a e-mail. The headlines are also inserted in `<key = value>` form. All possible key are described in table 4.

Key	Graphic	Description
inghead	no	Headline of ingredients
prephead	no	Headline of preparation
hinhead	no	Headline of hint
continuationhead	no	Text at the top of the second page of a recipe
continuationfoot	no	Text at the bottom of the first page, if the recipe is longer than one page
preparationtime	yes	
bakingtime	yes	
bakingtemperature	yes	
portion	yes	
portionvalue	no	Unit for the portions
calory	no	Text for the calorific value
source	yes	

Table 4: Recipe Headlines

```
\setHeadlines{
    inghead = Ingredients ,
    hinhead = Straight Tip ,
    continuationhead = Continuation \dots ,
}
```

Example 16: Setting Headlines Command

2.6 Options

This package provides three options which are explained in the following.

- **handwritten** This option requires the non-free package `emerald` and can only be used if your are not using TeX Live.
- **nowarnings** This options tries to eliminate all nasty warnings. Only important and interesting warnings are logged. This is in my opinion a good choice because the package `wrapfigure` generates a lot of warnings, see section 5.1.
- **myconfig** If you are using this package often or want to keep your main file 'clean' you can define your modifications in the configuration file. If you submit this option the file will be loaded otherwise `not`.

2.7 Background graphic

Inside this package there is only the option to set a background picture using the `setBackgroundPicture` macro. For creating transparent backgrounds I recommend **Inkscape**¹. You just have to import a picture and reduce the opacity of the picture (I prefer 22 %). The possible options for the orientation are:

- default
- pagecenter
- textcenter
- stockcenter

These orientations can be modified by using the `x` and `y` option. This is demonstrated in the following example.

```
\setBackgroundPicture
[%]
  x = 2cm,
  y = -1cm,
  width=\paperwidth-3cm,
  height ,
  orientation=pagecenter
]{pic/bg_transparent} % filepath
```

Example 17: Background Picture Command

¹<http://inkscape.org/>

3 Example

1. RECIPES

Mousse au Chocolat

- ⌚ 1h
- ◉ 5 Personen
- 📄 R. Gaus

Zubereitung

- 1 Eier trennen, Eiweiß und Sahne separat steif schlagen. Butter und Schokolade vorsichtig im Wasserbad schmelzen.
- 2 Eigelb in einer großen Schüssel mit 2 EL heißem Wasser cremig schlagen, den Zucker einrühren bis die Masse hell und cremig ist.
- 3 Die geschmolzene Schokolade unterheben, anschließend sofort Eischnee und Sahne unterheben (nicht mit dem Elektro-Mixer!)
- 4 Mindestens 2 Stunden im Kühlschrank kalt stellen. Aber nicht zu kalt servieren.

Zutaten

2 Tafeln	dunkle Schokolade (über 70 %)
3	Eier
200 ml	Sahne
40 g	Zucker
50 g	Butter

Tipp

Der Schokoladenanteil kann auch gesenkt werden.

4 Troubleshooting

4.1 MiKTeX

If you have problems with the used fonts (e.g. `cookingsymbols`) it might be necessary to refresh the database of MiKTeX.

4.2 TeX Live

If you are using this distribution you may should not use the option `handwritten`, because this option load the font package `emerald`. This package is non-free and therefore not available in TeX Live.

5 Bugs

If you found a bug, which is not described in the following section, feel free to write me an email. It can be found at the titlepage. Alternatively you can visit <https://code.google.com/p/xcookybooky/> and report the issue. All reported problems are registered there.

5.1 Known Issues

The `wrapfig` package has some problems with enumerations and the `letrine` package. This is the reason, why some warnings are generated by compiling (the example), if do not use the package option `nowarnings`. But nevertheless the results look quite well, so I decided to ignore this issue. By using `wrapfig` it is not possible to switch ingredients and preparation (the result looks really ugly). This is the reason, why the layout is not changed when setting the `twoside` option in the document class. I also tried `parcolumns` and `parallel`, but the results were disappointing. If you want to use this feature, you have to use `cookybooky`.

Another limitation is the length of the ingredients. The maximum length is one page, because the `wrapfigure` package does not work with `longtable`. As a result no pagebreak in the ingredients is possible.

6 Implementation

Let's have a look at the implementation.

6.1 Options

`xcookybooky` provides three options as explained in section 2.6. You can use the option `myconfig` to load your personal configuration (file). See section 6.14 for details.

```

1  {*package}
2  \newif\ifHandwrittenFont@required
3  \HandwrittenFont@requiredfalse
4  \DeclareOption{handwritten}
5  {%
6      displays the recipename in a handwritten font
7      \HandwrittenFont@requiredtrue
8      \AtEndOfPackage{
9          \setRecipeSizes{recipename = \fontsize{25pt}{30pt}}
10         \setRecipenameFont{fjd}{T1}{m}{n}
11     }
12 }
13 \ DeclareOption{nowarnings}
14 {%
15     tries to eliminate nasty warnings
16     \AtEndOfPackage{
17         \def\WF@conflict{}
18         \%def\fancywarning#1{}
19     }
20 }
21 \ DeclareOption{myconfig}
22 {%
23     load personal configuration
24     \AtEndOfPackage{
25         \InputIfFileExists{xcookybooky.cfg}
26         {\PackageInfo{xcookybooky}{inputting 'xcookybooky.cfg'}}
27         {\PackageWarning{xcookybooky}{cannot find the configuration file 'xcookybooky.cfg'}}
28     }
29 \ProcessOptions\relax
30

```

6.2 Required Packages

All needed packages are available at CTAN and as far as I know no general driver limitation are given.

```

29 \RequirePackage{tikz}                                % for creating the lines for the hint
30 \RequirePackage{graphicx}
31 \RequirePackage{xcolor}
32 \RequirePackage[clock, misc, weather]{ifsym} % Symbol package e.g. \Interval, \Wecker etc
33 \RequirePackage{cookingsymbols}                      % Cookings symbols e.g. \Oven, \Dish etc
34 \ifHandwrittenFont@required
35     \RequirePackage{emerald}                         % Handwritten Fonts
36 \fi
37 \RequirePackage{wrapfig}                            % To wrap the tabular with the ingredients
38
39 \RequirePackage{iflang}                            % detecting the language

```

```

40 \RequirePackage{ifthen}
41 \RequirePackage{xkeyval}
42 \RequirePackage{lettrine}                                % numbering the preparation steps
43 \RequirePackage{fancyhdr}
44 \RequirePackage{units}
45 \RequirePackage{eso-pic}                               % for background pictures
46 \RequirePackage{picture}                            % for modifying the position of the bg pictures
47 \RequirePackage{tabulary}                           % line breaks in tabular
48 \RequirePackage{framed}                            % frame for the introduction
49

```

6.3 Page Layout

This will set up the page. It is optimized for the document class `article`. If you use an other class you probably have to modify this.

Note: I tried to use the KOMA class `scrartcl`, but unfortunately some strange effects occurred.

```

50 \setlength{\parindent}{0cm}
51 \setlength{\parskip}{2ex plus 0.5ex}
52
53 \setlength{\textwidth}{15.5cm}
54 \setlength{\textheight}{24.0cm}
55 \setlength{\topmargin}{-0.8cm}
56 \setlength{\headheight}{14pt} %0cm
57 \setlength{\headsep}{1cm}
58 \setlength{\topskip}{0cm}
59 \setlength{\footskip}{1.4cm}
60 \setlength{\evensidemargin}{-0.5cm}
61 \setlength{\oddsidemargin}{0.5cm}
62 \setlength{\voffset}{0cm}
63 \setlength{\hoffset}{0cm}
64 \setcounter{secnumdepth}{2} % subsubsections not numbered
65 \setcounter{tocdepth}{3}    % subsubsections in the .toc file
66

```

\recipesection The macro `recipesection` allows to modify the entry in the table of contents.

Note: If you modify the macro you may change the two upper lines as well.

```

67 \newcommand*{\recipesection}[2] []
68 {%
69     \subsubsection[#1]{#2}
70 }
71

```

6.4 Color Management

At first the used non-standard colors must be defined.

```

72 \providecolor{DarkGreen}{rgb}{0,.5,0}
73 \providecolor{DarkBlue}{rgb}{0, 0, 0.7}
74 \providecolor{DarkGray}{rgb}{0.23, 0.23, 0.23}
75

```

Below the (default) colors are defined using the `xkeyval` package.

```

76 \define@key{colorManagement}{recipename}[DarkGreen]{\def\xcb@color@recipename{-#1}}
77 \define@key{colorManagement}{intro}[black]{\def\xcb@color@intro{-#1}}
78 \define@key{colorManagement}{ing}[DarkGray]{\def\xcb@color@ing{-#1}}
79 \define@key{colorManagement}{inghead}[DarkGray]{\def\xcb@color@inghead{-#1}}
80 \define@key{colorManagement}{prep}[black]{\def\xcb@color@prep{-#1}}
81 \define@key{colorManagement}{prephead}[black]{\def\xcb@color@prephead{-#1}}
82 \define@key{colorManagement}{suggestion}[black]{\def\xcb@color@suggestion{-#1}}
83 \define@key{colorManagement}{suggestionhead}[black]{\def\xcb@color@suggestionhead{-#1}}
84 \define@key{colorManagement}{separationgraph}[black]{\def\xcb@color@separationgraph{-#1}}
85 \define@key{colorManagement}{hint}[black]{\def\xcb@color@hint{-#1}}
86 \define@key{colorManagement}{hinthead}[red]{\def\xcb@color@hinthead{-#1}}
87 \define@key{colorManagement}{hintline}[red]{\def\xcb@color@hintline{-#1}}
88 \define@key{colorManagement}{numeration}[red]{\def\xcb@color@numeration{-#1}}
89 \setkeys{colorManagement}
90 {%
91   recipename,      % color of recipename
92   intro,          % color of introduction (text)
93   ing,            % color of ingredients (text)
94   inghead,         % color of headline of ingredients
95   prep,            % color of preparation (text)
96   prephead,        % color of headline of preparation
97   suggestion,      % color of suggestions (text)
98   suggestionhead, % color of headline of suggestion
99   separationgraph, % color of graphical separator
100  hint,            % color of hint (text)
101  hinthead,        % color of headline of hint
102  hintline,        % color of lines of hint
103  numeration,      % color of numeration (preparation)
104 }
105

```

`\setRecipeColors` The parameter are set in the form "key = value" as known by the `xkeyval` package.

```

106 \newcommand*{\setRecipeColors}[1]
107 {%
108   \setkeys{colorManagement}{#1}
109 }
110

```

This is the initialisation of all required recipe colors.

```

111 \setRecipeColors
112 {%
113   recipename,
114   intro,
115   ing,
116   inghead,
117   prep,
118   prephead,
119   suggestion,
120   suggestionhead,
121   separationgraph,
122   hint,
123   hinthead,
124   hintline,

```

```

125     numeration
126 }
127

```

6.5 Size Management

Below the (default) font sizes of the recipe are defined.

```

128 \define@key{sizeManagement}{recipename}[\fontsize{25pt}{30pt}]{\def\xcb@fontsize@recipename{\#1}}
129 \define@key{sizeManagement}{intro}[\normalsize]{\def\xcb@fontsize@intro{\#1}}
130 \define@key{sizeManagement}{ing}[\normalsize]{\def\xcb@fontsize@ing{\#1}}
131 \define@key{sizeManagement}{inghead}[\normalsize]{\def\xcb@fontsize@inghead{\#1}}
132 \define@key{sizeManagement}{prep}[\normalsize]{\def\xcb@fontsize@prep{\#1}}
133 \define@key{sizeManagement}{prephead}[\normalsize]{\def\xcb@fontsize@prephead{\#1}}
134 \define@key{sizeManagement}{suggestion}[\normalsize]{\def\xcb@fontsize@suggestion{\#1}}
135 \define@key{sizeManagement}{hint}[\normalsize]{\def\xcb@fontsize@hint{\#1}}
136 \define@key{sizeManagement}{hinthead}[\Large]{\def\xcb@fontsize@hinthead{\#1}}
137 \savekeys{sizeManagement}
138 {
139     recipename,    % font size of recipe name
140     intro,        % font size of introduction (text)
141     ing,          % font size of ingredients (text)
142     inghead,      % font size of headline of ingredients
143     prep,         % font size of preparation (text)
144     prephead,     % font size of headline of preparation
145     suggestion,   % font size of suggestion (text)
146     hint,         % font size of hint (text)
147     hinthead      % font size of headline of hint
148 }
149

```

\setRecipeSizes The parameter are set in the form "key = value" as known by the xkeyval package.

```

150 \newcommand*{\setRecipeSizes}[1]
151 {%
152     \setkeys{sizeManagement}{#1}
153 }
154

```

This is the initialisation of all required recipe sizes.

```

155 \setRecipeSizes
156 {%
157     recipename,
158     intro,
159     ing,
160     inghead,
161     prep,
162     prephead,
163     suggestion,
164     hint,
165     hinthead
166 }
167

```

6.6 Recipe Font

\setRecipenameFont This macro sets the font for the name of the recipe. You have to insert the font family, font encoding, font series and font shape. The size is set by the command `sizeManagement`.

```
168 %% Handwritten fonts: hlce, pbsi, hlcw, fjd, fau
169 %% Other fonts: fwb
170 \newcommand*{\setRecipenameFont}[4]
171 {%
172   \def\xcb@font@recipename
173   {
174     \fontfamily{#1}
175     \fontencoding{#2}
176     \fontseries{#3} %x1
177     \fontshape{#4}
178     \xcb@fontsize@recipename
179     \selectfont
180   }
181 }
```

This is the initialisation of the font of the recipename. The default is set to the system default settings to support as many L^AT_EX distributions as possible. Before version 1.3 a certain font was chosen per default. But this choice created an error if one uses UTF-8 input encoding.

```
182 \setRecipenameFont{\familydefault}{\encodingdefault}{\b}{\n}
183
```

We need a counter for the numeration of the preparation steps.

```
184 \newcounter{step}
185 \setcounter{step}{0}
```

Set the color of the numeration of preparation steps.

```
186 \renewcommand{\LettrineFontHook}
187 {%
188   \color{\xcb@color@enumeration}
189 }
190
```

6.7 Headlines and Translations

The following section defines the default English headlines of the recipe. They are only used if no supported language is detected.

```
191 \define@key{headlines}{inghead}[Ingredients]{
192   \def\xcb@name@inghead{\textcolor{\xcb@color@inghead}{\textbf{\xcb@fontsize@inghead{#1}}}\ }
193 }
194 \define@key{headlines}{prephead}[Preparation]{
195   \def\xcb@name@prephead{\textcolor{\xcb@color@prephead}{\textbf{\xcb@fontsize@prephead{#1}}}\ }
196 }
197 \define@key{headlines}{hinthead}[Hint]{
198   \def\xcb@name@hinthead{\textcolor{\xcb@color@hinthead}{\xcb@fontsize@hinthead{#1}}}\ }
199 }
```

```

200 \define@key{headlines}{continuationhead}[Continuation]{\def\xcb@name@continuationhead{-#1}}
201 \define@key{headlines}{continuationfoot}[Continuation on next page]{\def\xcb@name@continuationfoot{-#1}}
202 \define@key{headlines}{preparationtime}[\fontsize{14.5pt}{10pt}\Gloves]{\def\xcb@name@preparationtime{-#1}}
203 \define@key{headlines}{bakingtime}[\fontsize{14.5pt}{10pt}\Oven]{\def\xcb@name@bakingtime{-#1}}
204 \define@key{headlines}{bakingtemperature}[\Thermo{4}]{\def\xcb@name@bakingtemperature{-#1}}
205 \define@key{headlines}{portion}[\fontsize{14.5pt}{10pt}\Dish]{\def\xcb@name@portion{-#1}}
206 \define@key{headlines}{portionvalue}[Portions]{\def\xcb@name@portionvalue{-#1}}
207 \define@key{headlines}{calory}[Calorific value]{\def\xcb@name@calory{-#1}}
208 \define@key{headlines}{source}[\PaperPortrait]{\def\xcb@name@source{-#1}}
209 \savekeys{headlines}
210 {
211     inghead,
212     prephead,
213     hinthead,
214     continuationhead,
215     continuationfoot,
216     preparationtime,
217     bakingtime,
218     bakingtemperature,
219     portion,
220     portionvalue,
221     calory,
222     source
223 }

```

`\setHeadlines` This allows you to modify the headlines for the recipe parts. This also needed for translations. If you are going to define a language which is not supported by `xcookybooky` yet, please send me an email and I will integrate it in the next version! The parameter are set in the form "key = value" as known by the `xkeyval` package.

```

224 \newcommand*{\setHeadlines}[1]
225 {%
226     \setkeys{headlines}{#1}
227 }

228 \setHeadlines
229 {%

299

```

6.8 Recipe Lengths

The values `xcb@bigpicturewidth` and `xcb@smallpicturewidth` are the default values. They can be temporarily changed with the `graph` command, i.e for a single recipe.

```

300 \define@key{recipelengths}{pictureheight}[6cm]{\def\xcb@pictureheight{-#1}}
301 \define@key{recipelengths}{bigpicturewidth}[0.60\textwidth]{\def\xcb@bigpicturewidth{-#1}}
302 \define@key{recipelengths}{smallpicturewidth}[0.35\textwidth]{\def\xcb@smallpicturewidth{-#1}}
303 \define@key{recipelengths}{introductionwidth}[\textwidth]{\def\xcb@introductionwidth{-#1}}
304 \define@key{recipelengths}{preparationwidth}[0.60\textwidth]{\def\xcb@preparationwidth{-#1}}
305 \define@key{recipelengths}{ingredientswidth}[0.35\textwidth]{\def\xcb@ingredientswidth{-#1}}
306 \savekeys{recipelengths}
307 {
308     pictureheight,      % height of both pictures
309     bigpicturewidth,    % width of the bigger picture
310     smallpicturewidth, % width of the smaller picture
311     introductionwidth, % width of introduction
312     preparationwidth, % width of preparation
313     ingredientswidth  % width of ingredients
314 }
315

```

`\setRecipeLengths` This command allows to modify most sizes of the recipe.

```

316 \newcommand*{\setRecipeLengths}[1]
317 {%
318     \setkeys{recipelengths}{#1}
319 }

320 \setRecipeLengths
321 {%
322     pictureheight,
323     bigpicturewidth,
324     smallpicturewidth,
325     introductionwidth,
326     preparationwidth,
327     ingredientswidth
328 }
329

```

6.9 Recipe Commands

The following commands are implemented for inserting the recipe content.

Main Commands

These commands provide the main functionality for inserting a recipe.

`\introduction`

```

330 %% MAIN COMMANDS
331 \newcommand{\introduction}[1]

```

```

332 {%
333     \def\xcb@introduction
334     {%
335         \color{\xcb@color@intro}
336         \begin{framed}
337             \xcb@fontsize@intro#1
338         \end{framed}
339     }
340 }
341

```

\graph This command is used for entering the filename of the pictures. If a picture is not set, it is not shown.

```

342 \newcommand*{\graph}[1]
343 {%
344     \setkeys{picture}{#1}
345 }
346

```

\ingredients The command is used to insert the ingredients, which are displayed as a table.

```

347 \newcommand*{\ingredients}[1]
348 {%
349     \def\xcb@ingredients
350     {%
351         \xcb@name@inghead
352         \\[1em]
353         {\xcb@fontsize@ing\color{\xcb@color@ing}
354         \begin{tabulary}{\xcb@ingredientwidth}{rL}
355             #1
356         \end{tabulary}}
357     }
358 }
359

```

\preparation This command enables the user to insert the preparation steps.

```

360 \newcommand{\preparation}[1]
361 {%
362     \def\xcb@preparation
363     {%
364         \xcb@name@prephead
365         \%\\[4pt]
366         \xcb@fontsize@prep\color{\xcb@color@prep}#1
367     }
368     \setcounter{step}{0}
369 }
370

```

\suggestion The command is intended to insert some suggestions after the preparation and ingredients part. It is expandable in order to create more than one suggestion in one recipe.

```

371 \newcommand{\suggestion}[2] []
372 {%
373     \g@addto@macro\xcb@suggestion

```

```

374      {%
375          \xcb@separationgraph{\xcb@color@separationgraph}
376          \ifthenelse{\equal{#1}{}}%
377          {%
378              {\color{\xcb@color@suggestion}#2}%
379          }%
380          {%
381              \textbf{{\color{\xcb@color@suggestionhead}#1}}%
382          }%
383          {\color{\xcb@color@suggestion}#2}%
384      }%
385  }%
386 }%
387

```

\hint This command allows the user to insert an optional hint at the bottom of the recipe.

```

388 \newcommand{\hint}[1]
389 {%
390     \def\xcb@hint
391     {%
392         \pagebreak[1]      % begin here a new page, if the space is small
393         \begin{tikzpicture}[line width = 1.5pt, \xcb@color@hintline]
394             \useasboundingbox (0,0) -- ++(right:3.5cm) -- ++(up:3mm) -- ++(left:3.5cm) -- cycle;
395             \draw (-3mm, 0mm) -- ++(right:3.5cm);
396             \draw (0, 3mm) -- ++(down:2.4cm);
397         \end{tikzpicture}
398
399         \nopagebreak
400
401         \begingroup      % a group for the hint
402             \leftskip1em
403             \xcb@name@hinthead
404             \nopagebreak
405
406             \itshape{\color{\xcb@color@hint}\xcb@fontsize@hint{#1}}
407             \par
408         \endgroup
409     }%
410 }%
411

```

Supporting Commands

The following commands are intended to simplify inserting some parts of the recipe like backing temperatures.

\step The command is used for numbering the steps of preparation. Take a look at the `lettrine` package for details.

```

412 %% SUPPORTING COMMANDS
413 \newcommand{\step}{%
414 {%
415     \lettrine{%
416

```

```

417     lines=2,
418     lhang=0,           % space into margin, value between 0 and 1
419     loversize=0.15,    % enlarges the height of the capital
420     slope=0em,
421     findent=1em,       % gap between capital and intended text
422     nindent=0em        % shifts all intended lines, begining with the second line
423 ]{\stepcounter{step}\thestep}{}
424 }
425

```

\portion This macro is for inserting the portions correctly. By renewing this command you can easily define your own design for the portions.

```

426 \newcommand*{\portion}[2]{\xcb@name@portionvalue]
427 {%
428   \unit[#2]{#1}
429 }
430

```

\bakingtemperature This macro is used for inserting different bakingtemperatures. Only entered temperatures are displayed (with a symbol from `cookingsymbols` package). You can change the order of the temperatures by renew this command.

```

431 \define@key{bakingtemperature}{fanoven}[]{\def\xcb@bakingtemperature@fanoven{\#1}}

516 }

```

517

The following command is needed, if more ingredients than preparation (steps) are inserted. In this case the `wrapfigure` package behaves in a strange way. The result is that the hint is also floating around the ingredients, although the "box" is already closed. This command repairs this effect. It is taken from <http://mizine.de/latex/wrapfigure-austricksen/>.

```

518 \newcommand\xcb@cmd@wrapfill

570     \end{center}
571 }
572
```

6.10 Hooks

The following hooks allow the user to insert data many different places in the recipe in order to customize the recipe.

- T he content of this hook command is inserted before the (two) pictures. Therefore it is the first page content (aside from the page headline etc).

```
573 %% HOOKS
574 \newcommand*{\pregraphh}[1]
575 {%
576     \def\xcb@hook@pregraphh
577     {%
578         \begin{minipage}[T]{\textwidth}
579             #1
580             \vspace{0.6cm}
581         \end{minipage}
582     }
583 }
584
```

- T his command is inserted before the title of the recipe. That means it is displayed after the pictures.

```
585 \newcommand*{\pretitleh}[1]
586 {%
587     \def\xcb@hook@pretitleh
588     {%
589         #1
590     }
591 }
592
```

- T he next macro is integrated before the overview of the recipe and therefore after the recipe title.

```
593 \newcommand*{\prerecipeoverviewh}[1]
```

```
594 {%
595     \def\xcb@hook@prerecipeoverview
596     {%
597         #1
598     }
599 }
600
```

This command is inserted before the preparation headline and steps, i.e. it is beside the ingredients.

```
601 \newcommand*{\prepreparation}[1]
602 {%
603     \def\xcb@hook@prepreparation
604     {%
605         #1
606     }
607 }
608
```

This command is inserted after the preparation headline and steps, i.e. it is beside the ingredients.

```
609 \newcommand*{\postpreparation}[1]
610 {%
611     \def\xcb@hook@postpreparation
612     {%
613         #1
614     }
615 }
616
```

The following hook command is integrated before the ingredients. That means it parallel to the preparation.

```
617 \newcommand*{\preingredients}[1]
618 {%
619     \def\xcb@hook@preingredients
620     {%
621         #1
622     }
623 }
624
```

The following hook command is integrated after the ingredients. That means it parallel to the preparation.

```
625 \newcommand*{\postingredients}[1]
626 {%
627     \def\xcb@hook@postingredients
628     {%
629         #1
630     }
631 }
632
```

6.11 Recipe Environment

recipe This the environment for inserting recipes. Inside you define your ingredients, preparation, pictures (graph) and maybe suggestions and/or a hint. The commands `xcb@cmd@myrecipeoverview` and `xcb@cmd@wrapfill` are intended for internal use only.

```

633 \newenvironment{recipe}[2] []
