

nabc language for gregorio

AL
II

A L- le- lú-ia. V. Ve- ni Sancte

Spí- ri- tus, replé tu- ó- rum corda fi- dé- li- um: et tu- i a- mór-

is in e- is ignem ac- cénde.

The first system of musical notation is presented on a five-line staff. It begins with a large, bold capital letter 'A' in black, with 'AL' and 'II' written above it. The melody is written in black square notes with stems, and the lyrics are in Latin. Above the staff, there are red nabc symbols corresponding to the notes. The first line of music ends with a double bar line. The second line of music continues the melody and includes the text 'V. Ve- ni Sancte'. The third line of music continues the melody and includes the text 'Spí- ri- tus, replé tu- ó- rum corda fi- dé- li- um: et tu- i a- mór-'. The fourth line of music continues the melody and includes the text 'is in e- is ignem ac- cénde.' The system ends with a double bar line.

CO
II

O M- nes * qui in Chris- to bap- ti- zá- ti es- tis, Chris- tum in-du-

í- stis, al- le- lú- ia.

The second system of musical notation is presented on a five-line staff. It begins with a large, bold capital letter 'O' in black, with 'CO' and 'II' written above it. The melody is written in black square notes with stems, and the lyrics are in Latin. Above the staff, there are red nabc symbols corresponding to the notes. The first line of music ends with a double bar line. The second line of music continues the melody and includes the text 'M- nes * qui in Chris- to bap- ti- zá- ti es- tis, Chris- tum in-du-'. The third line of music continues the melody and includes the text 'í- stis, al- le- lú- ia.' The system ends with a double bar line.

The nabc language provides the ability to describe some adiastrumatic neumes, for now just the St. Gallen and Laon (Metz notation family) style. The language is partially based on Dom Eugène Cardine's Table of neumatic signs, but for more complex neumes doesn't always match how the neumes are called; instead attempts to make it easier to compose complex neumes from basic glyphs. To describe adiastrumatic neumes in gabc, the header should contain nabc-lines: 1; line, like:

```
nabc-lines: 1;
(f3) AL(ef~|ta>)le(fg/hggf|peclhgpilú(ef~|ta>)ia.(f.|ta-) (,)
(ii//|bv-|gh!ivHG//|vi-hhpu2su1sut1|fhg/|to|eef.|pt) (;)
```

The nabc snippets are then separated by | character from gabc snippets or other nabc snippets. Every gabc snippet may be followed by multiple nabc snippets. The maximum number of consecutive nabc snippets is the number declared in the header field nabc-lines: x;. After reaching that number of consecutive nabc snippets another gabc snippet followed by nabc snippets can follow. A single nabc snippet is not split into multiple lines, so for larger melismatic pieces it is desirable to synchronize the gabc snippets with corresponding nabc snippets. With nabc-lines: 1; the gabc and nabc snippets form an alternating pattern, like (gabc|nabc|gabc|nabc|gabc), in this case the last gabc snippet does not have any corresponding nabc neumes. With nabc-lines: 2; the snippets ordering could be e.g. (gabc|nabc1|nabc2|gabc|nabc1).

Each nabc snippet consists of a sequence of *complex neume descriptors*. Each *complex neume descriptor* consists of optional *horizontal spacing adjustment descriptor*, then *complex glyph descriptor*, optionally followed by a sequence of *subpunctis and prepunctis descriptors*, optionally followed by a sequence of *significant letter descriptors*.

The *horizontal spacing adjustment descriptor* consists of a sequence of horizontal spacing adjustment characters / and `.

- // move by nabc_largerspace skip to the right
- / move by nabc_interelements_space skip to the right
- `` move by nabc_largerspace skip to the left
- ` move by nabc_interelements_space skip to the left

The *complex glyph descriptor* consists of a *glyph descriptor*, optionally followed by a sequence of other *glyph descriptors*, all separated by the ! character. This is used to describe more complex glyphs, where certain basic glyphs are connected together.

Each *glyph descriptor* consists of a *basic glyph descriptor*, followed by optional *glyph modifiers*, followed by optional *pitch descriptor*.

The following description is for the St. Gall family of neumes, when using the gregall or gresgmodern fonts. For details on Laon (Metz notation family) neumes see 4.

The *basic glyph descriptor* is a two-letter string from the following table:

vi ✓ virga	po ✓ porrectus	tr ✓ torculus resupinus	tv /// trivirga	pq ✓ pes quassus
pu . punctum	to . torculus	st , stropa	pr ✓ pressus maior	q1 ✓ quilisma (3 loops)
ta . tractulus	ci ✓ climacus	ds .. distropa	pi ~ pressus minor	qi ✓ quilisma (2 loops)
gr , gravis	sc ✓ scandicus	ts ... tristropa	vs ✓ virga strata	pt ✓ pes stratus
cl ✓ clivis	pf ✓ porrectus flexus	tg . trigonus	or s oriscus	
pe ✓ pes	sf . ✓ scandicus flexus	bv ✓ bivirga	sa ✓ scandicus	

The *glyph modifiers* is a possibly empty sequence of following characters optionally followed by a number:

- S modification of the mark
- G modification of the grouping (neumatic break)
- M melodic modification
- - addition of episema
- > augmentive liquescence
- ~ diminutive liquescence

If Dom Cardine's table contains multiple glyphs with the same modifiers, a positive number is added afterwards. E.g. for augmentive liquescent clivis the table shows two different glyphs, the ancus cl> ✓ and then another neume - cl>1 ✓, the first neume does not contain any number after it, while the 1 indicates first variant.

The *pitch descriptor* allows to specify the vertical position of the neume. There are no staves, so the vertical position is only rough. For pitches the same letters as in gabc are used, a through n and p. If the *pitch descriptor* is missing, the default is hf, otherwise it consists of the letter h followed by the pitch letter. Within the *complex glyph descriptor*, each *basic glyph descriptor* has its own pitch, but in the current fonts there are no glyphs with different relative pitches, so if you use a *pitch descriptor* on any of the *basic glyph descriptors* in the *complex glyph descriptor*, it is best to use the same one on all the other *basic glyph descriptors* in the same *complex glyph descriptor*.

The *subpunctis and prepunctis descriptor* consists of the letters su for subpunctis or pp for prepunctis, followed optionally by a modifier letter from the following table and finally a mandatory positive number of repetitions. If the modifier letter is missing, it is a punctum.

- t . tractulus

- u  tractulus with episema
- v  tractulus with double episema
- w  gravis
- x  liquescens strophæ
- y  gravis with episema

Only subpunctis are normally used in neume classification, the prepunctis is a nabc concept to describe the rising sequence of punctis, tractulis etc. in the left low corner of some neume. While e.g. vipp2  describes the same neume as sc , the former form allows better control on how many punctis or tractulis or tractulis with episema etc. there are. Some examples: ppt3  stands for 3 raising tractulis with episema, while su1sut1sux1  stands for a punctum, followed by tractulus, followed by liquescens strophæ.

The *significant letter descriptor* consists of the letters ls, followed by a shorthand of the significant letter or common group of them, followed by a number - a rough position relative to the *complex glyph descriptor* glyph with prepunctis and subpunctis attached to it. If more than one *significant letter descriptor* is used on the same *complex neume descriptors* for the same position, then they are ordered in the order they are written in the nabc snippet at that position. The position numbers are:

1  left upper corner	2  above the neume	3  right upper corner
4  to the left of the neume		6  to the right of the neume
7  left bottom corner	8  below the neume	9  right bottom corner

The shorthands, including the ls prefix, which should be followed by the above mentioned position digit:

lsal  altius	lsiv  iusum valde	lss  sursum
lsam  altius mediocriter	lsk  klenche	lssb  sursum bene
lsb  bene	lsl  levare	lssc  sursum celeriter
lsc  celeriter	lsib  levare bene	lssimil  similiter
lscm  celeriter mediocriter	lslc  levare celeriter	lssimul  simul
lscw  coniunguntur	lslen  leniter	lssm  sursum mediocriter
lscw  celeriter (wide form)	lslm  levare mediocriter	lsst  sursum tenere
lsd  deprimatur	lsip  levare parvum	lssta  statim
lse  equaliter	lsit  levare tenere	lst  tenere
lseq  equaliter	lsm  mediocriter	lstb  tenere bene
lsew  equaliter (wide form)	lsmoll  molliter	lstm  tenere mediocriter
lsfid  fideliter	lsp  parvum	lstw  tenere (wide form)
lsfr  frendor	lspar  paratim	lsv  valde
lsg  gutture	lspfec  perfecte	lsvol  volubiliter
lsi  iusum	lspm  parvum mediocriter	lsx  expectare
lsim  iusum mediocriter	lspulcre  pulcre	

Finally a commented example of a nabc snippet:

```
``po:///pe>2lse7ls13qlhh!vshhppt1sut2q1>ppu3
```

`` stands for a negative horizontal skip (move to the left) by nabcinterelements space and nabclargerspace.

po  is a basic porrectus, at the default pitch (height hf).

:/// stands for a horizontal skip (move to the right) by two times nabclargerspace.

pe>2lse7ls13  stands for the 3rd augmentive liquescent form of podatus (epiphonus with tractulus, see the following page) at the default pitch, with equaliter in the low left corner and levare in the upper right corner.

qlhh!vshhppt1sut2  stands for a 3 loop quilisma joined with virga strata, both at relative pitch 2 above the default one, with a single tractulus before it and two subpunctis - tractulis.

q1>ppu3  is a 3 loop liquescent quilisma with 3 tractulis with episema before it.

The *basic glyph descriptor* for Laon neumes is very similar to the one used for St. Gall neumes, but with uncinus and oriscus-clivis added and strophæ, 2 loops quilisma and gravis removed:

un  uncinus	pe  pes	tr  torculus resupinus	pi  pressus minor
vi  virga	po  porrectus	ds  distropha	vs  virga strata
pu . punctum	to  torculus	ts  tristropa	or  oriscus
ta  tractulus	ci . climacus	tg  trigonus	sa  scandicus
gr gravis	sc  scandicus	bv  bivirga	pq  pes quassus
cl  clivis	pf  porrectus flexus	tv  trivirga	ql  quilisma
oc  oriscus-clivis	sf  scandicus flexus	pr  pressus maior	pt  pes stratus

The *subpunctis and prepunctis descriptor* consists of the letters su for subpunctis or pp for prepunctis, followed optionally by a modifier letter from the following table and finally a mandatory positive number of repetitions. If the modifier letter is missing, it is a punctum.

- n  uncinus
- q  quilisma
- z  virga
- x  cephalicus

The *significant letter descriptor* for Laon neumes allows another position, 5, which stands for inside the neume. The exact position of the letter depends on the glyph, if there is no glyph with the neume inside of it, it can't be positioned inside the neume.

The shorthands, including the 1s prefix, which should be followed by the above mentioned position digit for Laon neumes are:

1sa  augete	1snl  non levare
1sc  celeriter	1snt  non tenere
1seq  equaliter	1sm  mediocriter
1seq-  equaliter	1smd  mediocriter
1sequ  equaliter	1ss  sursum
1sf  fastigium	1ssimp  simpliciter
1sh  humiliter	1ssimpl  simpliciter
1shn  humiliter nectum	1ssp  sursum parum
1shp  humiliter parum	1sst  sursum tenere
1sl  levare	1st  tenere
1sn  non (tenere), negare, nectum, naturaliter	1sth  tenere humiliter

For the Tironian notes the form of the *significant letter descriptor* starts with the 1t prefix followed by letters from the following list, followed by above mentioned position digit (5 can't be used):

1ti  iusum	1tsj  subjice
1tdo  deorsum	1tsl  saltim
1tdr  devertit	1tsn  sonare
1tdx  devexum	1tsp  supra
1tps  prode sub eam (trade subtus)	1tsr  sursum
1tqm  quam mox	1tst  saltate (salte)
1tsb  sub	1tus  ut supra
1tse  seorsum

manuscript sources of the gregall font

The list of glyphs uses following abbreviations for manuscript references; the page number is always for the start of some antiphon, responsory, mass propers, even when the actual neume is on a later page. At the end of lines, GT stands for Graduale Triplex, Solesmes, 1979, OT for Offertoriale Triplex, Solesmes, 1985, AM for Antiphonale Monasticum, Solesmes, 1934, ARII for Antiphonale Romanum II, Solesmes, 2009 and NR for Nocturnale Romanum, Hartker Verlag, 2002, followed by page number which also contains the corresponding propers, antiphons or responsories.

Most of the glyphs taken from the e-codices Virtual Manuscript Library of Switzerland, <http://www.e-codices.unifr.ch/en>, with permission from Stiftsbibliothek, St. Gallen <http://www.stibi.ch/> and Stiftsbibliothek, Einsiedeln <http://kloster-einsiedeln.ch/>, the picture fragments from there are only present in the font source file to help drawing the glyphs.

manuscript sources of the grelaon font

The list of glyphs uses following abbreviations for manuscript references; the page number is always for the start of some antiphon, responsory, mass propers, even when the actual neume is on a later page. At the end of lines, GT stands for Graduale Triplex, Solesmes, 1979, OT for Offertoriale Triplex, Solesmes, 1985, GN for Graduale Novum de Dominicis et Festis, Conbrio Verlag Regensburg, 2011, followed by page number which also contains the corresponding propers, antiphons or responsories.

All the grelaon font glyphs taken from the LAON_BM_ms239 codex with the permission from the Bibliothèque municipale de la ville de Laon <http://manuscrit.ville-laon.fr>, the picture fragments from there are only present in the font source file to help drawing the glyphs.

Graduale Laudunensis, codex 239

L1 = http://manuscrit.ville-laon.fr/_app/_visualisation.php?cote=Ms239&vue=9
