

**NAME**

afm2tfm – convert Adobe font metrics to TeX font metrics

**DESCRIPTION**

PostScript fonts are (or should be) accompanied by font metric files such as **Times-Roman.afm**, which describes the characteristics of the font called Times-Roman. To use such fonts with TeX, we need TFM files that contain similar information. This program does that conversion.

For all the details, see the dvips manual (<http://tug.org/dvips>).

**FILES**

*psfonts.map* in the config directory used by dvips.

**SEE ALSO**

dvips(1), tex(1), vptovf(1), fontinst(1), afm2pl(1), otftotfm(1)

**BUGS**

An option to add letterspacing to the virtual font was rejected by Knuth because it would make the fi and fl ligatures break the normal rhythmic pattern.

**AUTHORS**

Tomas Rokicki and Donald E. Knuth.

Maintained in TeX Live; please send bug reports or other correspondence to [tex-k@tug.org](mailto:tex-k@tug.org) (<http://lists.tug.org/tex-k>).
