### **NAME**

afm2tfm – convert Adobe font metrics to TeX font metrics

# **DESCRIPTION**

PostScript fonts are (or should be) accompanied by font metric files such as **Times-Roman.afm**, which describes the characteristics of the font called Times-Roman. To use such fonts with TeX, we need TFM files that contain similar information. This program does that conversion.

For all the details, see the dvips manual (http://tug.org/dvips).

## **FILES**

psfonts.map in the config directory used by dvips.

# **SEE ALSO**

dvips(1), tex(1), vptovf(1), fontinst(1), afm2pl(1), otftotfm(1)

## **BUGS**

An option to add letterspacing to the virtual font was rejected by Knuth because it would make the fi and fl ligatures break the normal rhythmic pattern.

## **AUTHORS**

Tomas Rokicki and Donald E. Knuth.

Maintained in TeX Live; please send bug reports or other correspondence to tex-k@tug.org (http://lists.tug.org/tex-k).
