

**NAME**

`cef5conv` – convert a TeX document in Big 5 encoding containing CEF macros into ‘preprocessed’ form.

**SYNOPSIS**

**cef5conv** < *infile* > *outfile*

**DESCRIPTION**

The **Chinese Encoding Framework (CEF)** developed by Christian Wittern <cwittern@online.central.de> makes it possible to include CJK characters in various encodings using the SGML macros **&CX-aabb**; for Big 5 and CNS encoding and **&U-aabb**; for Unicode (**X** denotes a number between 0 and 7; 0 represents Big 5 encoding, 1-7 CNS encoding planes 1-7. **aabb** is either a decimal or hexadecimal number).

**cef5conv** converts the CEF macros of a Big 5 encoded document together with the Big5 encoding itself into a form which can directly processed with L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub>. It is identical to

**bg5conv** < *infile* | **cefconv** > *outfile*

This filter is part of the **CJK** macro package for L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub>.
