# NAME

cefsconv – convert a TeX document in SJIS encoding containing CEF macros into 'preprocessed' form.

#### **SYNOPSIS**

**cefsconv** < *infile* > *outfile* 

# DESCRIPTION

The Chinese Encoding Framework (CEF) developed by Christian Wittern <cwittern@conline.central.de> makes it possible to include CJK characters in various encodings using the SGML macros &CX-aabb; for Big 5 and CNS encoding and &U-aabb; for Unicode (X denotes a number between 0 and 7; 0 represents Big 5 encoding, 1-7 CNS encoding planes 1-7. aabb is either a decimal or hexadecimal number).

**cefsconv** converts the CEF macros of a SJIS encoded document together with the SJIS encoding itself into a form which can directly processed with  $L^{AT}EX 2_{\varepsilon}$ . It is identical to

**sjisconv** < *infile* | **cefconv** > *outfile* 

This filter is part of the CJK macro package for  $L^{AT}EX 2_{E}$ .
