NAME

cefsconv – convert a TeX document in SJIS encoding containing CEF macros into 'preprocessed' form.

SYNOPSIS

cefsconv < *infile* > *outfile*

DESCRIPTION

The Chinese Encoding Framework (CEF) developed by Christian Wittern <cwittern@conline.central.de> makes it possible to include CJK characters in various encodings using the SGML macros &CX-aabb; for Big 5 and CNS encoding and &U-aabb; for Unicode (X denotes a number between 0 and 7; 0 represents Big 5 encoding, 1-7 CNS encoding planes 1-7. aabb is either a decimal or hexadecimal number).

cefsconv converts the CEF macros of a SJIS encoded document together with the SJIS encoding itself into a form which can directly processed with ${\rm E^{\!A}T_{\!E\!}X}\,2_{\!E\!c}$. It is identical to

```
sjisconv < infile \mid cefconv > outfile
```

This filter is part of the CJK macro package for LATEX 2.
