## **NAME**

extconv - convert a TeX document in either Big 5+ or GBK encoding into 'preprocessed' form.

## **SYNOPSIS**

extconv < infile > outfile

## **DESCRIPTION**

Big 5+ and GBK encodings use the characters  $\{, \}$ , and  $\setminus$  which have special meanings in  $T_EX$  documents.

After processing a LATEX  $2_{\mathcal{E}}$  document which contains such characters with **extconv** you need not care about these special characters.

This filter is part of the CJK macro package for LATEX 2.

# **SEE ALSO**

bg5conv(1), sjisconv(1), cefconv(1), cef5conv(1), cefsconv(1), the CJK documentation files.
