

NAME

mtx-context - ConTeXt Process Management

SYNOPSIS

mtxrun --script context [*OPTIONS ...*] [*FILENAMES*]

DESCRIPTION

ConTeXt Process Management

OPTIONS: BASIC

--run process (one or more) files (default action)

--make create context formats

--ctx=name

use ctx file (process management specification)

--noctx ignore ctx directives and flags

--interface

use specified user interface (default: en)

--autopdf

close pdf file in viewer and start pdf viewer afterwards

--purge

purge files either or not after a run (--pattern=...)

--purgeall

purge all files either or not after a run (--pattern=...)

--usemodule=list

load the given module or style, normally part of the distribution

--environment=list

load the given environment file first (document styles)

--mode=list

enable given the modes (conditional processing in styles)

--path=list

also consult the given paths when files are looked for

--arguments=list

set variables that can be consulted during a run (key/value pairs)

--randomseed=number

set the randomseed

--result=name

rename the resulting output to the given name

--trackers=list

set tracker variables (show list with --showtrackers)

--directives=list

set directive variables (show list with --showdirectives)

--silent=list
 disable logcatgories (show list with --showlogcategories)

--strip strip Lua code (only meant for production where no errors are expected)

--errors=list
 show errors at the end of a run, quit when in list (also when --silent)

--htmlerrorpage
 generate html error page instead (optional: =scite)

--noconsole
 disable logging to the console (logfile only)

--purgeresult
 purge result file before run

--forcexml
 force xml stub

--forcecld
 force cld (context lua document) stub

--forcelua
 force lua stub (like texlua)

--forcemp
 force mp stub

--arrange
 run extra imposition pass, given that the style sets up imposition

--noarrange
 ignore imposition specifications in the style

--jit use luajittex with jit turned off (only use the faster virtual machine)

--jiton use luajittex with jit turned on (in most cases not faster, even slower)

--once only run once (no multipass data file is produced)

--runs process at most this many times

--forcedruns
 process this many times (permits for optimization trial runs)

--batchmode
 run without stopping and do not show messages on the console

--nonstopmode
 run without stopping

--nosynctex
 never initializes synctex (for production runs)

--synctex
 run with synctex enabled (better use upsynctex[state=start])

--nodates
 omit runtime dates in pdf file (optional value: a number (this 1970 offset time) or string "YYYY-MM-DD HH:MM")

--nocompression
 forcefully turns off compression in the backend

--trailerid
 alternative trailer id (or constant one)

--generate
 generate file database etc. (as luatools does)

--paranoid
 do not descend to .. and ../../..

--version
 report installed context version

--global
 assume given file present elsewhere

--nofile use dummy file as jobname

OPTIONS: EXPERT

--touch update context version number (also provide --expert, optionally provide --basepath)

--nostatistics
 omit runtime statistics at the end of the run

--profile
 profile job (use: mtxrun --script profile --analyze)

--timing
 generate timing and statistics overview

--keepTUC
 keep previous TUC files (jobname-TUC-[run].tmp)

--keepLog
 keep previous log files (jobname-log-[run].tmp)

--lmtx force lmtx mode (when available)

--extra=name
 process extra (mtx-context-... in distribution)

--extras
 show extras

OPTIONS: SPECIAL

--pdftex
 process file with texexec using pdftex

--xetex process file with texexec using xetex

--mkii process file with texexec

--pipe do not check for file and enter scroll mode (--dummyfile=whatever.tmp)

--sandbox
 process file in a limited environment

--addbinarypath

prepend the (found) binarypath to runners
