

**NAME**

pmxchords – This script processes pmx files with chord symbols, allowing for key transpositions

**SYNOPSIS**

[ texlua ] **pmxchords** { *option* | *jobname* [ .pmx ] } ...

The default effect is to preprocess each pmx file so that chords are transposed as necessary, generating a temporary pmx file which is then processed by pmxab. Finally the resulting tex file is renamed to have the original jobname. The default filename for the temporary file is <jobname>\_chtr.pmx.

**OPTIONS**

- v**        output program name and version number, and quit
- h**        output usage summary and quit
- s**        stop after first step (of producing a temporary pmx file with transposed chord symbols).

**SEE ALSO**

pmx(1), musixtex(1)

**AUTHORS**
