

**NAME**

`psbook` – rearrange pages in PostScript file into signatures

**SYNOPSIS**

**psbook** [ **-q** ] [ **-ssignature** ] [ *infile* [ *outfile* ] ]

**DESCRIPTION**

*Psbook* rearranges pages from a PostScript document into “signatures” for printing books or booklets, creating a new PostScript file. The input PostScript file should follow the Adobe Document Structuring Conventions.

The **-s** option selects the size of signature which will be used. The signature size is the number of sides which will be folded and bound together; the number given should be a multiple of four. The default is to use one signature for the whole file. Extra blank sides will be added if the file does not contain a multiple of four pages.

*Psbook* normally prints the page numbers of the pages rearranged; the **-q** option suppresses this.
