

NAME

psbook – rearrange pages in PostScript file into signatures

SYNOPSIS

psbook [**-q**] [**-signature**] [*infile* [*outfile*]]

DESCRIPTION

Psbook rearranges pages from a PostScript document into “signatures” for printing books or booklets, creating a new PostScript file. The input PostScript file should follow the Adobe Document Structuring Conventions.

The **-s** option selects the size of signature which will be used. The signature size is the number of sides which will be folded and bound together; the number given should be a multiple of four. The default is to use one signature for the whole file. Extra blank sides will be added if the file does not contain a multiple of four pages.

Psbook normally prints the page numbers of the pages rearranged; the **-q** option suppresses this.
