

NAME

tpic2pdf_{tex} – convert tpic \specials for use by pdf_{tex}

SYNOPSIS

pic -t *somefile.pic* | **tpic2pdf_{tex}** > *somefile.tex*

Process *somefile.tex* by **pdf_{tex}**/**pdf_lat_{ex}**.

DESCRIPTION

Experimental **awk** script for conversion of **tpic** \specials as produced by **(groff-)pic** into **pdf_TeX** \pdf_literal sections for further processing by **pdf_{tex}**.

NOTES

Current version: 1.97.

tpic \special description see e. g.: Goossens, Rahtz, Mittelbach: The LaTeX Graphics Companion, Addison-Wesley, 1997, pp. 464.

BUGS

Spline curve shapes not fully authentic (unknown algorithm). Bounding box does not care for line thickness (groff pic feature). Splines might be outside bounding box. Fill color does not work correctly for arrowheads (pic limitation).
